

## Open Channel Remote Monitoring is Easy with Flow Reporter

**FREE  
Trial Offer**

*Flow Reporter software gives you control of your process in the comfort of your control room.*

Remote monitoring of open channel flow is now easy and efficient with Flow Reporter, a Windows-based configuration software and data extractor for use with the Milltronics Open Channel Monitor (OCM III).

### Great Capabilities:

- Monitors OCM III flow readings, view and modify parameters remotely from your desktop PC
- Connects to OCM III either directly or with a modem – host computer can be any distance from the flowmeters
- Lets you seek out specific data using the relational database
- Uploads data logs from the OCM
- Reviews past and present data logs in a database environment
- Exports summary information and data to Excel
- Prints daily or monthly reports

Experience the time and cost savings for yourself during our 15-day trial special offer. Just load the software from the CD or from our web site (select Products, then Open Channel Meter OCM III, and Downloads), and see what Flow Reporter can do for you!

After 15 days, you can purchase Flow Reporter by contacting the Milltronics sales representative nearest you with your name, company name, and the Flow Reporter System ID number found on the demonstration screen. You'll receive a password that activates the program and registers your license.

### Benefits and Advantages:

- Saves staff time – no need to manually retrieve data from field locations
- Lets you check flow rates at your own convenience, regardless of work schedules
- Reduces time spent on record keeping
- Facilitates more accurate reports
- Windows-based software is easy to use

Try Flow Reporter for yourself, and you'll want to keep these advantages working for you.
