

## DCP300 Digital Controller Programmer

## Specification

### Function

The DCP300 is a high-function digital controller programmer supporting up to 19 program profiles with up to 30 segments per profile. A universal input accepts thermocouple signals, resistance temperature detector (RTD) signals, dc voltages and dc currents. DCP301 is a single channel (1 input) version. DCP302 is a dual channel model with 2 inputs and 2 loops. A temperature and relative humidity calculation model which controls temperature and relative humidity is selectable on DCP302.

The DCP300 supports extensive digital I/O functions including 3 event outputs, 5 time events (optional) and 12 external switch inputs (8 optional). Up to 2 auxiliary outputs can also be added on as an option. DCP302 has only 1 auxiliary output available.
