

For Limit Controller see page 3.
For detailed instructions see UDC2500 Controller Product Manual 51-52-25-127.

Step 1. Model Number Interpretation

Write your controller model number in the boxes. Then refer to Tables I, II, and III and circle the corresponding options to identify your controller's features. A dot indicates the feature is available.

Key Number				-
Table I		-	Table II	
Table I		-	Table III	
X X X X X - X X				
Other options				

KEY NUMBER - UDC2500 Single Loop Controller

Description	Selection	Availability
Digital Controller for use with 90 to 264Vac Power	DC2500	↓
Digital Controller for use with 24Vac/dc Power	DC2501	↓

TABLE I - Specify Control Output and/or Alarms

Output #1	Description
	None (Can be used as an indicator only)
	Current Output (4 to 20ma, 0 to 20 ma)
	Electro Mechanical Relay (5 Amp Form C)
	Solid State Relay (1 Amp)
	Open Collector transistor output
	Dual 2 Amp Relays (Both are Form A) (Heat/Cool Applications)
	No Additional Outputs or Alarms
Output #2 and Alarm #1 or Alarms 1 and 2	One Alarm Relay Only
	E-M Relay (5 Amp Form C) Plus Alarm 1 (5 Amp Form C Relay)
	Solid State Relay (1 Amp) Plus Alarm 1 (5 Amp Form C Relay)
	Open Collector Plus Alarm 1 (5 Amp Form C Relay)

TABLE II - Communications and Software Selections

Selection	Availability
DC 2500	2501
Communications	None
	Auxiliary Output/Digital Inputs (1 Aux and 1 DI or 2 DI)
	RS-485 Modbus Plus Auxiliary Output/Digital Inputs
	10 Base-T Ethernet (Modbus RTU) Plus Auxiliary Output/Digital Inputs
Software Selections	Standard Functions, Single Display
	Dual Display with Auto/Manual
	Set Point Programming (12 Segments) Dual Display, Auto/Manual
	Limit Controller
Reserved	No Selection
Infrared interface	None
	Infrared Interface Included (Can be used with a Pocket PC)

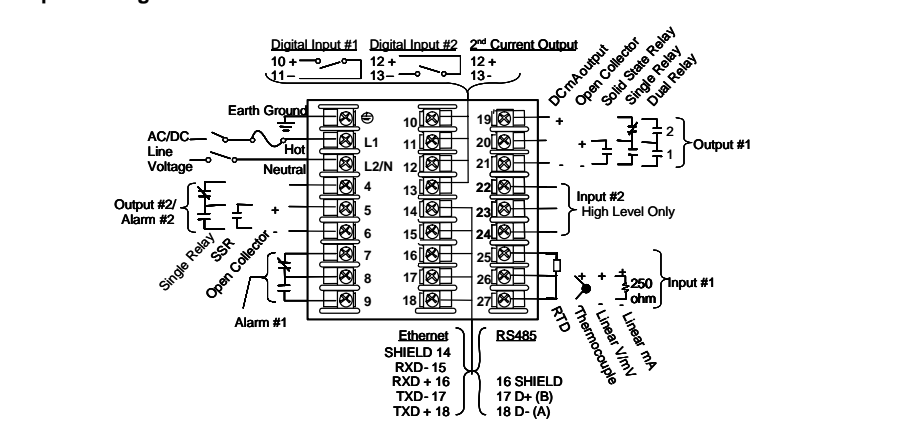

TABLE III - Input 1 can be changed in the field using external resistors

Input	Description	Selection	Availability
			DC 2500 2501
Input 1	TC, RTD, mV, 0-5V, 1-5V	1 -	• •
	TC, RTD, mV, 0-5V, 1-5V, 0-20mA, 4-20mA	2 -	• •
	TC, RTD, mV, 0-5V, 1-5V, 0-20mA, 4-20mA, 0-10V	3 -	• •
Input 2	None	0 -	• •
	0-5V, 1-5V, 0-20mA, 4-20mA	1 -	• •

Step 2. Dimensions and mounting

Step 3. Wiring

Step 4. Configuration Procedure

Step	Operation	Press	Result
1	Enter Set Up Mode		Upper Display = SET Lower Display = TUNING (This is the first Set Up Group title)
2	Select any Set Up Group		Sequentially displays the other Set Up group titles shown in the prompt hierarchy. (See 5. Configuration Record Sheet for prompts.) You can also use the ▲ or ▼ keys to scan the Set Up groups in both directions. Stop at the Set Up group title that describes the group of parameters you want to configure. Then proceed to the next step.
3	Select a Function Parameter		Upper Display = the current value or selection for the first function prompt of the selected Set Up group. Lower Display = the first Function prompt within that Set Up group. Sequentially displays the other function prompts of the Set Up group you have selected. Stop at the function prompt that you want to change, then proceed to the next step.
4	Change the Value or Selection	▲ or ▼	Increments or decrements the value or selection that appears for the selected function prompt. If you change the value or selection of a parameter while in Set Up mode then decide not to enter it, press M-A RESET] once—the original value or selection is recalled.
5	Enter the Value or Selection		Enters value or selection made into memory after another key is pressed.
6	Exit Configuration		Exits configuration mode and returns controller to the same state it was in immediately preceding entry into the Set Up mode. It stores any changes you have made. If you do not press any keys for 30 seconds, the controller times out and reverts to the mode and display used prior to entry into Set Up mode.

Step 5. Configuration Record Sheet

Enter the value or selection for each prompt on this sheet so you will have a record of how your controller was configured.

(Ethernet Addresses accessible via PIE tool)

Step 6. Start Up Procedure for Operation

Single Display Step	Dual Display Step	Operation	Press	Result
1	1	Configure controller		Make sure the controller has been configured properly and that all the values and selections have been recorded on the Configuration Record Sheet. See steps 4 & 5.
	2	Select Manual Mode		N/A for Single Display Model Until "M" indicator is ON. The controller is in manual mode.
	3	Adjust the Output		N/A for Single Display Model To adjust the output value and ensure that the final control element is functioning correctly. <i>Upper Display = Pv Value</i> <i>Lower Display = OT and the output value in %</i>
	4	Select Automatic Mode		N/A for Single Display Model Until "A" indicator is ON. The controller is in Automatic mode. The controller will automatically adjust the output to maintain the process variable at setpoint.

Single Display Step	Dual Display Step	Operation	Press	Result
2	5	Enter the Local Setpoint	or	Upper Display = Pv Value Lower Display = SP and the Local Setpoint Value To adjust the local setpoint to the value at which you want the process variable maintained. The local setpoint cannot be changed if the Setpoint Ramp function is running.
3	6	Tune the Controller		Use Accutune to tune the controller; see product manual for detailed procedure or refer to Tuning Set Up group to set that the selections for PB or GAIN, RATE T, and I MIN or I RPM.

For detailed instructions see UDC2500 Limit Controller Product Manual 51-52-25-118.

Step 1. Model Number Interpretation

Write your controller model number in the boxes. Then refer to Tables I, II, and III and circle the corresponding options to identify your controller's features. A dot indicates the feature is available.
