1/16 - 1/8 - 1/4 DIN LIMIT CONTROLLERS CONCISE PRODUCT MANUAL (59333-2)
⚠ **CAUTION: Installation should be only performed by technically competent personnel. Local Regulations regarding electrical installation & safety must be observed.**

1. INSTALLATION

The models covered by this manual have three different DIN case sizes *(refer to section 9)*. Some installation details vary between models. These differences have been clearly shown.

*Note: The functions described in sections 2 thru 8 are common to all models.*

Installing Option Modules

1/16 Din Size Instruments

- CPU PCB
- Option Module 1 *(Fixed Limit Relay)*
- Option Module 2
- Mounting Struts
- Option Module A
- Option Module 3
- PSU PCB

1/8 & 1/4 Din Size Instruments

- CPU PCB
- Option Module B *(not used in Limit Controllers)*
- Option Module 2
- Option Module 1 *(Fixed Limit Relay)*
- Mounting Struts
- Option Module A
- Option Module 3
- PSU PCB

To access module A, first detach the PSU and CPU boards from the front by lifting first the upper, and then lower mounting struts. Gently separate the boards.

a. Plug the required option modules into the correct connectors, as shown below.
b. Locate the module tongues in the corresponding slot on the opposite board.
c. Hold the main boards together while relocating back on the mounting struts.
d. Replace the instrument by aligning the CPU and PSU boards with their guides in the housing, then slowly push the instrument back into position.

*Note: Option modules are automatically detected at power up.*

Option Module Connectors

1/16 Din Size Instruments

- Option Slot 1 *(Fixed Limit Relay)*
- Option Slot 2 Connector PL4A
- Option Slot A Connectors PL5 & PL6
- Option Slot 3 Connector PL4B

- Option Slot B *(not used on Limit Controllers)*
- Option Slot 2 Connector PL4A
- Option Slot 1 *(Fixed Limit Relay)*
- Option Slot A Connectors PL5 & PL6
- Option Slot 3 Connector PL4B

Panel-Mounting

The mounting panel must be rigid, and may be up to 6.0mm (0.25inch) thick. Cut-out sizes are:
Cut-Out Dim A	Cut-Out Dim B
1/16 & 1/8 Din = 45mm	1/16 Din = 45mm
1/4 Din = 92mm	1/8 & 1/4 Din = 92mm

For *n* multiple instruments mounted side-by-side, cut-out A is 48*n*-4mm (1/16 & 1/8 Din) or 96*n*-4mm (1/4 Din)

Tolerance +0.5, -0.0mm

- Mounting Panel
- Instrument Housing
- Ratchets
- Gasket

Slide mounting clamp over the instrument housing towards rear face of mounting panel until the tongues engage in ratchets and instrument is clamped in position.

Hold instrument firmly in position (apply pressure to bezel only)

⚠ **CAUTION:** Do not remove the panel gasket; it is a seal against dust and moisture.

Rear Terminal Wiring

USE COPPER CONDUCTORS (EXCEPT FOR T/C INPUT)
Single Strand wire gauge : Max 1.2mm (18SWG)

As these functions cannot be changed, no Configuration menus are required.

⚠ **CAUTION: Process Variable Offset can be used to modify the measured value to compensate for probe errors. Positive values increase the reading, negative values are subtracted. This parameter is effectively, a calibration adjustment and MUST be used with care. There is no front panel indication of when this parameter is in use.**

Exceed Condition
An Exceed Condition is when the Process Variable exceeds the Limit Setpoint value (i.e. PV > SP when set for high limit action, PV < SP for low limit action). The **[EXCEED]** LED is on during this condition, and is extinguished once it has passed.
Limit Output Function
Limit Output relay(s) de-energise whenever an Exceed condition occurs, causing the process to shut down. The **[OUT]** LED is on when the relay is de-energised. The relay remains latched off even if the Exceed condition is no longer present. Only giving a reset instruction (**after** the exceed condition has passed) will re-energise the relay, allowing the process to continue. The **[OUT]** LED then turns off.

Limit Annunciator Outputs
An Annunciator output will activate when an Exceed condition occurs, and will remain active until a reset instruction is received, or the Exceed condition has passed. Unlike the Limit Output, an Annunciator can be reset even if the Exceed condition is present. When an Annunciator is active, the 🔔 LED will flash and the Alarm Status screen is available.

Resetting Limit Outputs & Annunciators
A reset instruction can be given by pressing the **[RESET]** key, via the Digital Input (if fitted) or via a Comms command if an RS485 Communications module is fitted. Annunciators will deactivate. Limit Outputs will only re-energise if the Exceed condition has passed.

⚠ **CAUTION: Ensure that the cause of the Exceed condition has been rectified before resetting the Limit Output.**
