

Level instruments

Continuous level measurement - Guided wave radar transmitters

SITRANS LG200

Overview

Introduction

Guided Wave Radar transmitters combine TDR (time domain reflectometry), ETS (equivalent time sampling) and modern low power circuitry.

Time Domain Reflectometry (TDR)

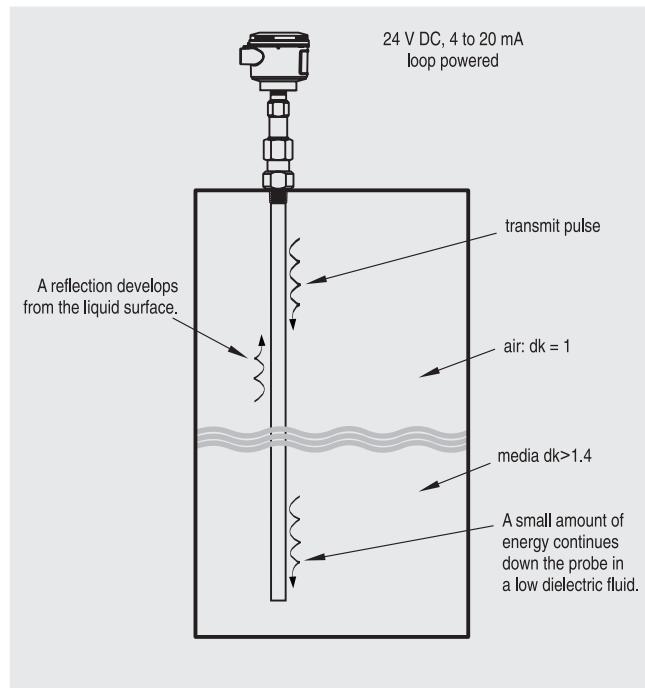

TDR uses pulses of electromagnetic (EM) energy to measure distances or levels. When a pulse reaches a dielectric discontinuity (created by media surface), part of the energy is reflected. The greater the dielectric difference, the greater the amplitude (strength) of the reflection.

In the SITRANS LG200 transmitter, a waveguide with a characteristic impedance in air is used as a probe. When part of the probe is immersed in a material other than air, there is lower impedance due to the increase in the dielectric. When an EM pulse is sent down the probe and meets the dielectric discontinuity, a reflection is generated.

Equivalent Time Sampling (ETS)

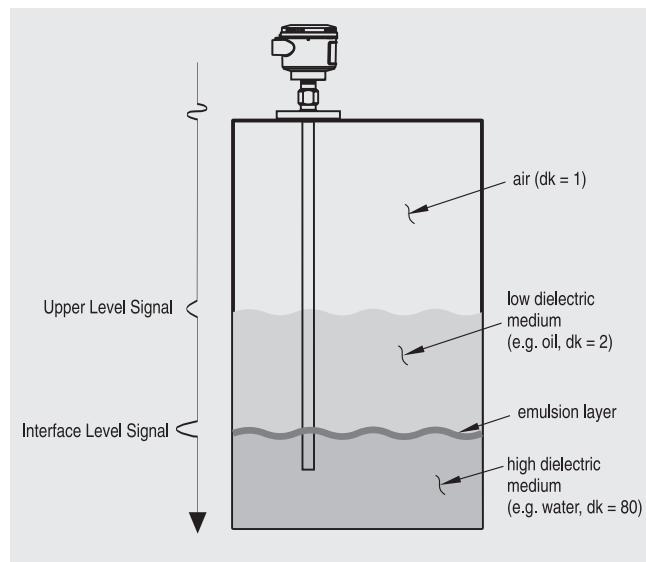

ETS (Equivalent Time Sampling) is used to measure the high speed, low power EM energy. ETS is critical in the application of TDR to vessel level measurement technology. The high speed EM energy (1000 ft/ μ s) is difficult to measure over short distances and at the resolution required in the process industry. ETS captures the EM signals in real time (nanoseconds) and reconstructs them in equivalent time (milliseconds), which is much easier to measure with today's technology.

ETS is accomplished by scanning the waveguide to collect thousands of samples. Approximately 8 scans are taken per second; each scan gathers more than 30,000 samples.

Interface Detection

The SITRANS LG200, when used with the Model 7ML1301-6 coaxial probe, is a transmitter capable of measuring both an upper level and an interface level. The upper liquid must have a dielectric constant between 1.4 and 5 and the two liquids have a difference in dielectric constants greater than 10. A typical application would be oil over water, with the upper layer of oil being non-conductive with a dielectric constant of approximately 2 and the lower layer of water being very conductive with a dielectric constant of approximately 80. This interface measurement can only be accomplished when the dielectric constant of the upper medium is lower than the dielectric constant of the lower medium.

Overview

SITRANS LG200 is a guided wave radar transmitter for short and medium range level, level/interface, and volume measurement of liquids and solids. It is unaffected by changes in process conditions, high temperatures and pressures, and steam.

5

Benefits

- Coaxial, rigid, and flexible single or twin rods for many applications
- Measures accurately on materials with dielectric (dK) as low as 1.4
- Guided wave radar measurement for up to 2.5 mm (0.12") accuracy
- Measures level and interface on challenging applications including foam
- 3 button programming for quick setup
- Reliable level measurement on harsh applications with pressure up to 430 bar g (6250 psi g) and temperatures as high as +427 °C (+800 °F).

Application

SITRANS LG200 provides accurate measurement in level, volume, and interface applications. For short and extended applications, LG200 offers coaxial, single or twin rod probes, and single or twin cable probes up to 22.5 m (75 ft).

SITRANS LG200 measures accurately in liquid or slurry applications of corrosive vapors, foam, saturated steam, high viscosity, quick fill/empty rates, low levels and varying dielectrics and product densities.

Ideal for retrofitting torque tube applications, SITRANS LG200 chamber replacement probe can be mounted in existing chambers or cages for optimal measurement.

- Key applications: hydrocarbon processing, interface/level measurement, low dielectric liquids, high temperature/pressure applications, powdered solids with high angle of repose.

Continuous level measurement - Guided wave radar transmitters

SITRANS LG200

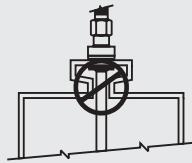

Configuration

Mounting on a nozzle

Optimal 1:1 ratio

Do not use reducers

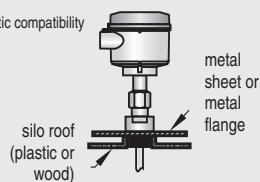

Installation in non-metallic silos¹⁾

For installation in vessels of a non-metallic construction or possibly open vessels, a suitable launch plate is required to optimize the impedance of the transmitted signal as it travels along the probe. Optimal performance cannot be guaranteed if a suitable transition is not available at the process connection.

When using single rod versions (flexible or solid) and a threaded process connection, a metal sheet or flange will greatly improve conditions as this provides a suitable launch plate.

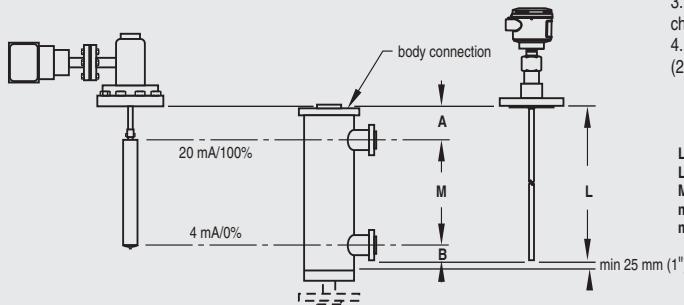

A flanged process connection is generally accepted to be provision of this launch plate.

¹⁾ See Electromagnetic compatibility

Displacer/Torque Tube Replacement

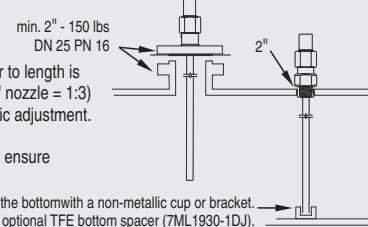

- With Coaxial Probe 7ML1301-4 there is no top transition zone allowing measurement to the process connection.
- Minimum pipe size: coaxial probes 2"/DN50, twin rod 3"/DN80, single rod 2"/DN50
- 22 mm (0.875") Coaxial probes should be used where limited build up is expected.

Bypass pipe

- Minimum pipe diameter 50 mm (2")
- Minimum 25 mm (1") from bottom of the bypass pipe
- Take note of bottom transition zone for chosen probe, see probe type table
- For pipe diameters less than 50 mm (2") consult factory

$$\begin{aligned} L &= A+M+B \\ L &= \text{probe insertion length} \\ M &= \text{measuring range} \\ &\text{min. } 300 \text{ mm (11.81')} \\ &\text{max. } 5700 \text{ mm (224')} \end{aligned}$$

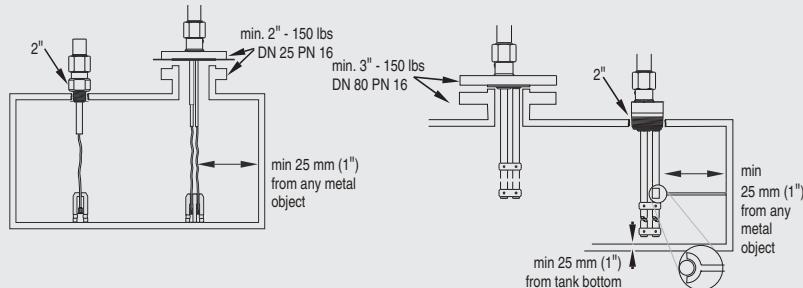

Single Rod mounting:

- Do not mount in nozzles <50 mm (2") in diameter.
- Mount in applications where ratio of diameter to length is 1:1 or greater. Any ratio less than 1:1 (ie: 2"x6" nozzle = 1:3) may require a blanking distance and/or dielectric adjustment.
- Do not use pipe reducers.
- Keep conductive objects away from probe to ensure proper performance.

When mounting into a metallic cup or bracket, use optional TFE bottom spacer (7ML1930-1DJ).

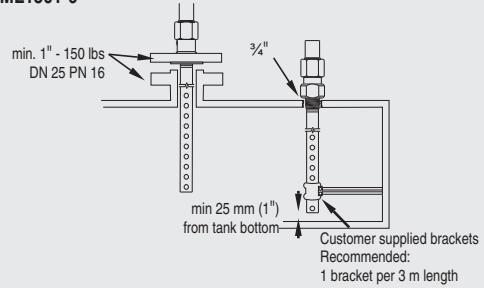

Twin Rod mounting 7ML1302-x:

- Active rod must be mounted at least 25 mm (1") away from any obstructions.
- Minimum stillwell or nozzle diameter for probe is 76 mm (3"), inactive part needs to be flush with inside tank wall.

Coaxial 7ML1301-x/Coaxial-Interface 7ML1301-6

- Minimum 25 mm (1") from tank bottom
- Minimum 2" process connection for enlarged coaxial probe
- Distance to obstructions not important due to enclosed design

Technical specifications

Mode of operation	
Measuring principle	Guided wave radar measurement
Measuring range	0.15 to 22.5 m (0.5 to 75 ft)
Output	
mA analog output with HART digital signal	Optically isolated 4 to 20 mA, 620 Ω max.
Output range	
• Analog	3.8 to 20.5 mA usable
• Start-up current	4.0 mA
Diagnostic alarm	Adjustable 3.6 mA, 22 mA, HOLD
Digital communication	HART® Version 5.x and multidrop compatible
Performance	
Non-linearity	< 0.1% of probe length or 2.5 mm (0.1"), whichever is greater [(top 60 cm (24") of twin rod probes 30 mm (1.2")]
• Coaxial/twin rod probes	
• Single rod probes	< 0.3% or 0.3" (8 mm), whichever is greater
• Interface models	Upper layer: ± 25.4 mm (1") Interface layer: ± 25.4 mm (1") (distinct interface surface required)
Resolution and repeatability	≤ 2.5 mm (0.1")
Accuracy	
• Coaxial/twin rod probes	< 0.1 % of probe length or 0.1" (2.5 mm), whichever is greater [Top 60 cm (24") of twin rod probes 30 mm (1.2")]
• Single rod probes	± 0.5 % of probe length or 0.5" (13 mm), whichever is greater
• Interface models	± 1" (25 mm) (distinct interface required)
Electromagnetic compatibility	Meets CE requirements (EN 61326-1/2006) (Single and Twin Rod probes must be used in metallic vessel or stilling well to maintain CE compliance.)
• Response time	< 1 second
• Warm up time	< 5 seconds
Rated operating conditions¹⁾	
• Ambient temperature for enclosure	-40 to +80 °C (-40 to +176 °F)
• LCD readable temperature range	-20 to +70 °C (-5 to +160 °F)
• Location	Indoor/outdoor
• Installation category	II
• Pollution degree	2
Medium conditions¹⁾	
Dielectric constant	dK ≥ 1.4
Process temperature range ²⁾	-196 to +427 °C (-321 to +800 °F)
Vessel pressure ³⁾	Full vacuum to 431 bar g (6250 psi g), probe dependent

Design	
Weight of transmitter with solid lid	1.28 kg (2.83 lbs)
Weight of transmitter with glass window lid	1.60 kg (3.52 lbs)
Materials	
• Enclosure	Aluminum, epoxy-coated
• Degree of protection	Type 4/NEMA 4, IP65
• Cable inlet	2x M20x1.5 or 2 x 1/2" NPT
Process connections	
• Threaded	G 3/4" [(BSPP), EN ISO 228-1], 1", 1½", 2" NPT [(Taper), ANSI/ASME B1.20.1] and G 2" [(BSPP), EN ISO 228-1]
• Flanged	3/4" to 4", ASME, DIN flanges
• Hygenic	3/4" to 4", Triclover
Programming	
Local	Three button, menu-driven data entry with security passwords
Remote	SIMATIC PDM via HART
Power	
	11 to 36 V DC
Certificates and approvals	
• General Purpose	CSA/FM, CE, C-TICK
• Intrinsically Safe	FM Class I, Div. 1, Groups A, B, C, D, Class II, Div. 1, Groups E, F, G T4, Class III, Type 4, IP65 CSA Class I, Div. 1, Groups A, B, C, D, Class II, Div. 1, Groups E, F, G T4, Class III, Type 4, IP65 ATEX II 1G EEx ia IIC T4
• Explosion Proof/Flame Proof	FM Class I, Div. 1, Groups B, C, D, Class II, Div. 1, Groups E, F, G T4, Class III, Type 4, IP65 CSA Class I, Div. 1, Groups B, C, D, Class II, Div. 1, Groups E, F, G T4, Class III, Type 4, IP65 ATEX II 1/2 G EEx d [ia] IIC T6 ATEX II 1/2 D IP65 T85 °C
• Non-Incendive	FM Class I, Div. 2, Groups A, B, C, D, Class II, Div. 2, Groups F, G T4, Class III, Type 4, IP65 CSA Class I, Div. 2, Groups A, B, C, D, Class II, Div. 2, Groups E, F, G T4, Class III, Type 4, IP65 ATEX II 3G EEx nA (nL) IIC T4 to T6 ATEX II 3G EEx nA II T4 to T6
• Non-Sparking	Functional Safety to SIL-1 in accordance with IEC 61508 Safe Failure Fraction (SFF) of 85.5% (Third party FMEDA Analysis - hardware only)
• Others	Functional Safety to SIL-2 in accordance with IEC 61508 Safe Failure Fraction (SFF) of 91% (Third party FMEDA Analysis - hardware only)

Continuous level measurement - Guided wave radar transmitters

SITRANS LG200

Selection and Ordering data

SITRANS LG200 Transmitter

A guided wave radar transmitter for short and medium range level, level/interface, and volume measurement of liquids and solids, including high temperature and pressure applications, and steam.

Note:

In addition to the transmitter, please select a probe configuration to complete the SITRANS LG200 (ordered separately).

For orders of 10 or more, please consult factory.

Power

24 V DC, 2-wire

Signal Output

4 to 20 mA HART

Options

SIL-1 Approved (FMEDA analysis) SFF = 85.5 %

SIL-2 Approved (FMEDA analysis) SFF = 91 %

Enclosure/lid

Aluminum

Aluminum with glass window

Cable inlet

2 x 1/2" NPT, IP65

2 x M20x1.5, IP65

Approvals (Please select for your region)

Schematics

SITRANS LG200 General Purpose Wiring

Intrinsically Safe wiring

When connecting SITRANS LG200 in Intrinsically Safe applications, install an approved IS barrier in the non-hazardous (safe) area.

Explosion Proof wiring

When connecting SITRANS LG200 in hazardous areas with explosion hazard, the wiring for the transmitter must be contained in Explosion Proof conduit extending into the safe area. An Explosion Proof conduit fitting is not required within 457 mm (18") of the transmitter. An Explosion Proof conduit fitting is required between the hazardous and safe areas.

SITRANS LG200 connections
