SIEMENS

Intelligence and reliability

Siemens signal processing technology is based on experience gained from over a million level instruments installed in industrial applications around the world: this technology makes Siemens instruments exceptionally intelligent and reliable. Each of our technologies sets the standard for processing raw data into accurate and reliable level readings and is defined by their innovative and advanced approach to measurement.

Sonic Intelligence – Patented echo processing technology for ultrasonic level instruments. The software's advanced algorithms provide intelligent processing of echo profiles. The result is repeatable, fast, and consistent measurement you can trust.

Process Intelligence – Advanced echo processing technology for radar instruments facilitating quick installation, programming, and operation. The signal processing provides exceptional accuracy and the ability to automatically ignore obstructions.

Active-Shield and Inverse frequency shift capacitance technology – Siemens capacitance instruments use active-shield technology to ensure true and accurate level readings are recorded from the material surface. Our Inverse frequency shift capacitance method of processing and measuring data is unmatched in the industry, providing more reliable level readings than other capacitance instruments.

Siemens rotating and vibratory point level switches are simple, reliable, and cost-effective ready to go solutions for practically all solids and liquids applications.

After installing Siemens level measurement instruments in your application, you gain peace of mind: the result is cost-effective measurement of continuous level, point level, and interface in a wide range of applications, including water and wastewater, chemical, petrochemical, food and beverage, mining, cement, aggregates, and bulk solids.

Our products are intelligent and reliable. That's why customers choose Siemens level instruments in millions of industrial process applications worldwide.

* Dielectric (dk) properties are the material's ability to reflect microwave energy: the higher the value, the better the reflective properties.

** Check chemical compatibility.

Radar for solids

SITRANS LR560

SITRANS LR560 and SITRANS LR460: your answer to all solids level measurement

SITRANS LR560 is the easiest and most reliable radar transmitter on the market. With a high frequency of 78 GHz, 4° narrow beam, and short wavelength, it performs reliably on solids material from practically any installation location.

Extreme dust? No problem. Siemens pioneered radar technology for solids level measurement. The 2-wire, loop powered, FMCW SITRANS LR560 is the state-of-the-art radar transmitter for continuous solids level measurement. Operating at 78 GHz, it features a unique lens antenna that is highly resistant to build-up, making it maintenance free. The 4° narrow beam means SITRANS LR560 can be installed practically anywhere on your silo. You don't need to worry how close you are to the sides and its small size fits most nozzles. 78 GHz creates a short wavelength that yields extremely good signal reflections from almost any solids material, even on a steep slope. With the local interface push buttons or infrared handheld programmer, the graphical Quick Start Wizard guides you through a simple setup and within a few minutes the transmitter is up and running. No other radar level transmitter for solids is this easy, cost-effective, and maintenance-free.

For extremely low dielectric, low density powders, SITRANS LR460 is the preferred solution. Featuring a horn antenna with an 8° beam, the 4-wire FMCW SITRANS LR460 has proven itself in thousands of applications.

Radar for liquid and slurries

Reliable and accurate liquids level measurement

Siemens large selection of radar transmitters for liquid level measurement offers the right solution for your application. Siemens radar transmitters handle applications ranging from simple storage vessels to complex demanding process vessels.

SITRANS LR250 is the first choice for liquids level measurement in storage and process vessels to 20 meters (66 ft). Its high frequency and small antenna makes it easy to use and install. It offers reliable level measurement in liquids with low dielectric constants like hydrocarbons. For applications ranging from 20 to 50 meters (66 to 164 ft), SITRANS LR400 offers high performance on low dielectric media.

For process vessels which may include turbulence, buildup, or foam, SITRANS LR200 is the best choice. Its low frequency better suits this environment, and functions reliably in applications up to 20 meters (66 ft). Agitation and interference in the vessel is managed with Process Intelligence.

For low-cost level measurement, SITRANS Probe LR offers a small process connection and operates at a low frequency. It can be used on liquids and slurries up to 20 meters (66 ft). Simple configuration and programming makes Probe LR a cost-effective solution.

SITRANS LR200 radar antenna configurations for any application

Antenna version	Flat-faced flange with rod and integral process seal	Shielded rod eliminates nozzle interference	Sanitary rod (one-piece construction) for food and pharmaceutical applications	Horn 80, 100, 150, 200 mm sizes available (80 and 100 mm for stilling well only)	Sliding waveguide antenna, typically for digester applications that include an isolation valve between the instrument and the vessel

Guided wave radar

Guided wave radar for level measurement and interface applications

SITRANS LG200 is Siemens 2-wire guided wave radar transmitter for short- to medium-range level, level/interface, and volume measurement of liquids and slurries. Its many antenna configurations make it possible to measure numerous complex applications, even ammonia, chlorine, high temperature/pressure, or cryogenics.

	SITRANS LG200 2-wire, guided wave radar transmitter for short- to medium-range level, level/interface, and volume measurement of liquids and solids.
Range	22.5 m (75 ft)
Process temperature	-196 to 427 °C (-320 to 800 °F)
Process pressure	Full vacuum to 431 bar g (6250 psi g), probe dependent
Key features	<ul style="list-style-type: none"> • Unaffected by change in density and dielectric properties of 1.4 and higher • Accurate to 2.5 mm (0.1") • Extended insertion length – probe lengths up to 22.5 m (75 ft) • Push button configuration or HART communication • SIL suitable <p>Probe options</p> <ul style="list-style-type: none"> • Coaxial probes for steam, ammonia, overfill, interface, and high pressure/high temperature • Single rod probes (rigid including sanitary or cable) • Twin rod (rigid or cable)
Output	4 to 20 mA/HART
Communications	<ul style="list-style-type: none"> • HART • Enhanced EDD for SIMATIC PDM and 375/475 handheld for configuration and diagnostics
Power specifications	11 to 36 V DC
Approvals	CSA _{us/cr} , CE, FM, Hazardous Approvals, ATEX, C-TICK, SIL-1, SIL-2, Lloyd's Steam Approval

	General purpose	Liquids with dk as low as 1.4	Threaded: ¾" NPT, G 1", 2" NPT Flanged: 1 to 4" (DN 25 to 100)	316L SS, TFE spacers, O-ring	60 to 610 cm (24 to 240")
	High pressure/aggressive liquids	431 bar g (6250 psi g) ammonia chlorine	Threaded: ¾" NPT, G 1", 2" NPT Flanged: 1 to 4" (DN 25 to 100)	316L SS, TFE spacers, Borosilicate	60 to 610 cm (24 to 240")
	High temperature, high pressure/aggressive liquids	427 °C at 133 bar g (800 °F at 2000 psi g) ammonia chlorine	Threaded: ¾" NPT, G 1", 2" NPT Flanged: 1 to 4" (DN 25 to 100)	316L SS, Alumina spacers (optional PEEK or TFE), Borosilicate	60 to 610 cm (24 to 240")
	Steam	<ul style="list-style-type: none"> Saturated steam environments Hot water boilers 720 °C (1328 °F) 	Threaded: ¾" NPT, G 1" Flanged: 1 to 4" (DN 25 to 100)	316L SS, PEEK spacers, Aegis PF128 O-ring	60 to 455 cm (24 to 180")
	Interface	Measures both upper liquid level and interface level	Threaded: ¾" NPT, G 1", 2" NPT Flanged: 1 to 4" (DN 25 to 100)	316L SS, TFE spacers, O-ring	60 to 610 cm (24 to 240")
	Overfill/torque tube/displacer replacer	Measures 100% full point of a vessel	Threaded: ¾" NPT, G 1", 2" NPT Flanged: 1 to 4" (DN 25 to 100)	316L SS, TFE spacers, O-ring	60 to 610 cm (24 to 240")
Single rod probes					
	Rigid	Liquids and slurries with dk >10 (>1.9 if close to wall or in pipe)	Threaded: 2" NPT, G 2" Flanged: 2 to 4" (DN 50 to 100)	316L SS, PTFE, O-ring	60 to 610 cm (24 to 240")
	Flexible for liquids	Applications with coating and buildup, ranges to 22.5 m (75 ft), dk ≥ 4	Threaded: 2" NPT, G 2" Flanged: 2 to 4" (DN 50 to 100)	316L SS, TFE, O-ring	1 to 22.5 meters (3 to 75 ft)
	PFA insulated rod	High viscosity liquids, slurries, adhesives, paint	Threaded: 2" NPT, G 2" Flanged: 2 to 4" (DN 50 to 100)	316L SS, PFA, TFE, O-ring	60 to 610 cm (24 to 240")
	Sanitary	Food and beverages, pharmaceuticals, semiconductors	Flanged: 19 to 100 mm (¾ to 4") Tri-Clover-style 16 amp fitting	316L SS, TFE, 0.4 µm Ra finish	60 to 610 cm (24 to 240")
	PFA insulated/PFA faced flange	Aggressive/corrosive media	Flanged: 2 to 4" (DN 50 to 100)	PFA, no O-ring	60 to 610 cm (24 to 240")
	High temperature, high pressure	Viscous materials or materials that coat/buildup; high pressure/temperature	Threaded: G 2", 2" NPT Flanged: 2 to 4" (DN 50 to 100)	316L SS, TFE, O-ring	60 to 610 cm (24 to 240")
	Flexible for solids	Bulk granular solids range to 22.5 m (75 ft), dk ≥ 4	Threaded: 2" NPT, G 2" Flanged: 2 to 4" (DN 50 to 100)	316L SS, TFE, O-ring	1 to 22.5 meters (3 to 75 ft)
Twin rod probes					
	Rigid twin rod	For applications where dk ≥ 1.9, oils, etc.	Threaded: 2" NPT, G 2" Flanged: 2 to 4" (DN 50 to 100)	316L SS, TFE spacers, O-ring	60 to 610 cm (24 to 240")
	Flexible twin rod, liquids	Most liquid media up to 22.5 m (75 ft), dk ≥ 1.9	Threaded: 2" NPT, G 2" Flanged: 2 to 4" (DN 50 to 100)	316L SS, FEP webbing, O-ring	1 to 22.5 meters (3 to 75 ft)
	Flexible twin rod, solids	Bulk solids, grains, powders, dk ≥ 1.9; up to 22.5 m (75 ft)	Threaded: 2" NPT, G 2" Flanged: 2 to 4" (DN 50 to 100)	316L SS, FEP webbing, O-ring	1 to 22.5 meters (3 to 75 ft)

Ultrasonic

From simple level monitoring to complex control systems

Ultrasonic instruments are the cost-effective choice for monitoring and control in short- to long-range applications for liquids, slurries, and solids in a wide range of industries. Non-contacting technology offers the advantage of low maintenance. Siemens is the world leader in ultrasonic level technology, with many models available, and strong application experience to support you.

From simple integrated level measurement transmitters, like SITRANS Probe LU to advanced ultrasonic control systems like SITRANS LUC500, our ultrasonic instruments rely on Siemens patented Sonic Intelligence echo processing to ensure reliable and accurate measurements. Our controllers combine with Echomax transducers to create the most reliable and accurate ultrasonic solutions on the market.

Ultrasonic

All-in-one reliable controller – full duplex pump station control is just part of a normal day's work for SITRANS LUC500. Sonic Intelligence echo processing is a standard feature paired with the powerful Siemens Echomax XRS-5 or XPS-15 transducers. The input and output configuration is user selectable. Standard pump routines, pump exercising, scum ring reduction, submergence detection, and CSO monitoring for compliance and energy-saving pump routines are standard features of the SITRANS LUC500 controller.

	SITRANS LUC500 Complete ultrasonic level controller for monitoring and control of water distribution and wastewater collection systems, with energy-saving algorithms.	OCM III High accuracy ultrasonic flow monitor for open channels. Used with Echomax XRS-5 transducer.
Range	0.3 to 15 m (1 to 50 ft), transducer and material dependent	0.3 to 1.2 m (1 to 4 ft), or 0.6 to 3 m (2 to 10 ft)

SITRANS LUC500

Transducer Selection

Siemens Echomax ultrasonic transducers provide trouble-free, reliable performance. The complete line of transducers is the logical choice for monitoring levels of liquids, slurries, and solids in a wide range of industries. They are impervious to dust, moisture, vibrations, flooding, and high temperatures. Mounting brackets are available for easy installation. The transducers are non-contacting with an active face to ensure no material buildup and reduce downtime. The PVDF enclosure provides excellent corrosion resistance. Siemens transducers are easy to install and are virtually maintenance-free.

Inverse frequency shift capacitance

Tried and tested for a wide range of applications, including interface

Siemens inverse frequency shift capacitance continuous level transmitters are for liquids, solids, and interface applications. They are ideal for standard and industrial applications in chemical, hydrocarbon processing, food and beverage, mining, aggregate, and cement industries.

The patented Active-Shield technology protects measurements from the effects of moisture, vapors, foam, temperature or pressure variations, and material buildup. They are cost-effective, reliable, low maintenance, and easy to install.

SITRANS LC500

Point level

Simply reliable cost-effective level switches

Siemens point level switches use ultrasonic, rotating, vibrating, and inverse frequency shift capacitance technologies. The broad selection of switches provide a cost-effective solution for practically all solids and liquids applications.

Siemens level switches detect high, low, and demand levels in solids, including low bulk density applications such as dry powder and fine grain, and for liquid applications, including sticky material.

Our level switches offer superior performance while reducing maintenance, downtime, and equipment replacement cost. Their robust design lasts in harsh and abrasive environments, guaranteeing a long service life, and low cost of ownership. They are easy to setup and to connect to any alarm or control system.

Siemens rotating or vibrating point level switches specialize in low bulk density applications; and the standard aluminum enclosures and stainless steel process connections provide exceptional resistance to mechanical forces.

	SITRANS LVS100 Vibrating point level switch for high or low level detection of dry powder, fine grain, and granular bulk solids with densities starting at 60 g/l (3.7 lb/ft ³).	
Range	170 mm to 2 m (6.7" to 6.5 ft)	
Process temperature	-40 to 150 °C (-40 to 302 °F)

Point level

Level detection when precision, space, and reliability matter most

Our unique inverse frequency shift approach to capacitance technology ensures accurate, reliable, and repeatable measurement, even in dusty, turbulent, and vaporous environments or in situations with product buildup. Because even a small level change creates a large change in frequency, Siemens instruments provide excellent resolution while consistently outperforming conventional devices.

The Pointek ULS200 is an ultrasonic non-contacting switch with two points for level detection of bulk solids, liquids, and slurries in a wide variety of industries; ideal for sticky materials.

Tilt switches provide point level detection with switch isolators or when used separately. They offer a cost-effective solution for point level detection, plug-chute detection, belt tracking, and feed loss detection on conveyor belts. They also provide simple high and low alarms for both dry bulk solids and liquids.

	Pointek CLS100 Compact 2-wire inverse frequency shift capacitance switch for level detection in constricted spaces, interfaces, solids, liquids, slurries, and foam.	Pointek CLS200 Inverse frequency shift capacitance switch with a high level of chemical resistance; ideal for level detection of interfaces, solids, liquids, slurries, foam, and for simple pump control.

Gravimetric

Precise level measurement independent of material, tank shape characteristics, and temperature

Gravimetric level measurement with SIWAREX offers high accuracy of 0.07% or better for even the most difficult process application due to the separation of the sensor and the process environment. Siemens offers all components, PLC-based electronics, load cells, and required accessories to implement level measurement solutions for all industries.

	SIWAREX U For SIMATIC S7-300 and ET 200M in combination with load cells.	SIWAREX CS For SIMATIC ET 200S in combination with load cells.	SIWAREX MS For SIMATIC S7-200 in combination with load cells.
Applications	The complete hopper with load material is weighed, and then the weight of the hopper including the attachments and fittings are zeroed out. This allows the determination of the net fill weight for practically all materials.		
Measuring range	From 6 kg to 1100 tons (13 lbs to 1212 tonnes), dependent on number and type of load cells (for more details, see WT10 catalogue)		
Process temperature	Independent of the process temperature		
Process pressure	Independent of the process pressure		
Key features	<ul style="list-style-type: none"> • High standard – accuracy of 0.07% • High life-span, low maintenance • Non-contacting and no material dependency • No dependency on the temperature of the material, foam, and suspended substances • No dependency on the hopper form, fittings, and agitators 		
Communications	Centralized with SIMATIC CPU via system bus; decentralized via PROFIBUS DP or PROFINET		
Auxiliary power	24 V SIMATIC-system voltage		
Approvals	CE, FM, UL, cULus, HazLoc, ATEX Zone 2, Zone 1 in combination with SIWAREX IS		

Hydrostatic

Level measurement with relative and differential pressure transmitters

Hydrostatic level measurement is a low cost option for direct mounting or mounting with remote seals on tanks and vessels. These instruments can handle extreme chemical and mechanical loads as well as electromagnetic interference. They are widely applied in chemical and petrochemical industries.

	SITRANS P MPS Hydrostatic level transmitter for direct mounting on tanks or vessels.	SITRANS P DSIII Hydrostatic level transmitter for mounting with remote seal on open or closed vessels with corrosive or non-corrosive liquids.	SITRANS P300 Hydrostatic level transmitter for mounting with front flush design or remote seal on open or closed vessels with corrosive or non-corrosive liquids.
Range	From 0 to 2 mH ₂ O to 0 to 20 mH ₂ O	10 to 30,000 mbar g (0.15 to 435 psi g)	0.01 to 400 bar g (0.15 to 5802 psi g)
Process temperature	-10 to 80 °C (14 to 176 °F)	-40 to 100 °C (-40 to 212 °F)	-40 to 100 °C (-40 to 212 °F)
Process pressure	0 to 20 bar g (0 to 290 psi g)	32 to 160 bar g (464 to 2325 psi g)	0.01 to 400 bar g (0.15 to 5802 psi g)
Key features	<ul style="list-style-type: none"> Compact stainless steel enclosure and sensor Easy installation Options <ul style="list-style-type: none"> Intrinsically Safe (IS) Special measuring ranges: 0 to 1 mH₂O to 0 to 200 mH₂O Cable length up to 200 m (656 ft) 	<ul style="list-style-type: none"> With remote seals up to 400 °C (752 °F) Self-diagnostic elements for parameterization Options <ul style="list-style-type: none"> Intrinsically Safe Explosion proof Flame proof Corrosion-resistant diaphragm and process connections Range of different process connections 	<ul style="list-style-type: none"> With remote seals up to 400 °C (752 °F) With front flush design up to 200 °C (392 °F) Self-diagnostic elements for parameterization Options <ul style="list-style-type: none"> Intrinsically Safe Corrosion-resistant diaphragm and process connections Range of different process connections
Output	4 to 20 mA	4 to 20 mA	4 to 20 mA
Communications	N/A	<ul style="list-style-type: none"> HART PROFIBUS PA FOUNDATION Fieldbus 	<ul style="list-style-type: none"> HART PROFIBUS PA FOUNDATION Fieldbus

Approvals	CE, ATEX	CE, ATEX, FM, CSA	CE, ATEX, cFM _{US}

Remote digital displays

Process monitoring anywhere

SITRANS RD100 and SITRANS RD200 are remote digital displays for level, flow, pressure, temperature, weighing, and other process instruments.

SITRANS RD100 is NEMA 4X/IP67 enclosed for indoor and outdoor applications, in hot or cold environments, and in safe or hazardous areas. It remotely displays process variables in a 4 to 20 mA loop.

SITRANS RD200 is a universal input, panel mount remote digital display. Data can be remotely collected, logged, and presented from as many as 100 displays on your local computer using the free downloadable RD Software.

	SITRANS RD100 2-wire loop powered NEMA 4X/IP67 enclosed remote digital display for process instrumentation.	SITRANS RD200 Universal input, panel mount remote digital display for process instrumentation.
Input types	4 to 20 mA	Universal current, voltage, RTD, thermocouple
Power input	Loop powered	12 to 36 V DC, 12 to 24 V AC, 6 W max.
Digits	3½ digit display	4 digit display
Key features	<ul style="list-style-type: none"> • 2-wire loop powered • Simple two-step configuration • Easy setup • Intrinsically Safe, non-incendive • Two modes of input allow for easy servicing, with no interruption of loop required • Factory calibrated • Large display 	<ul style="list-style-type: none"> • Easy to read in all conditions • Accepts current, voltage, thermocouple and RTD signals • Included software supports remote monitoring, programming, data logging alarm acknowledgement • Can be used for alarm indication or process control applications • Provides power to instrument 24 V DC, 200 mA • Allows user to configure future RD200s with current setup reducing setup time, cost, and errors • Selection of optional enclosures, including explosion-proof and standard panel mount
Enclosure	NEMA 4X/IP67 impact resistant	NEMA 4X/IP65 front panel
Display visibility	25.4 mm (1") high LED	14 mm (0.56") high LED
Operating temperature	-40 to 85 °C (-40 to 185 °F)	0 to 65 °C (32 to 149 °F)
Accuracy	±0.1% of span ±1 count	Input type dependent
Approvals	FM, CSA hazardous approvals	CE, UL, cUL

SITRANS RD500

Remote monitoring of instrumentation anytime, anywhere via the web, including alarm event handling and data capture

SITRANS RD500 is a remote data manager providing remote monitoring through data logging, web access, and alarming for instrumentation. It offers integrated web and ftp server, email and sms for alarming, and up to 2 gigabytes for data logging from instrumentation. It enables remote monitoring of inventory levels, process and environmental applications, and provides web access to most types of field instrumentation, including flow, level, pressure, temperature, and weighing.

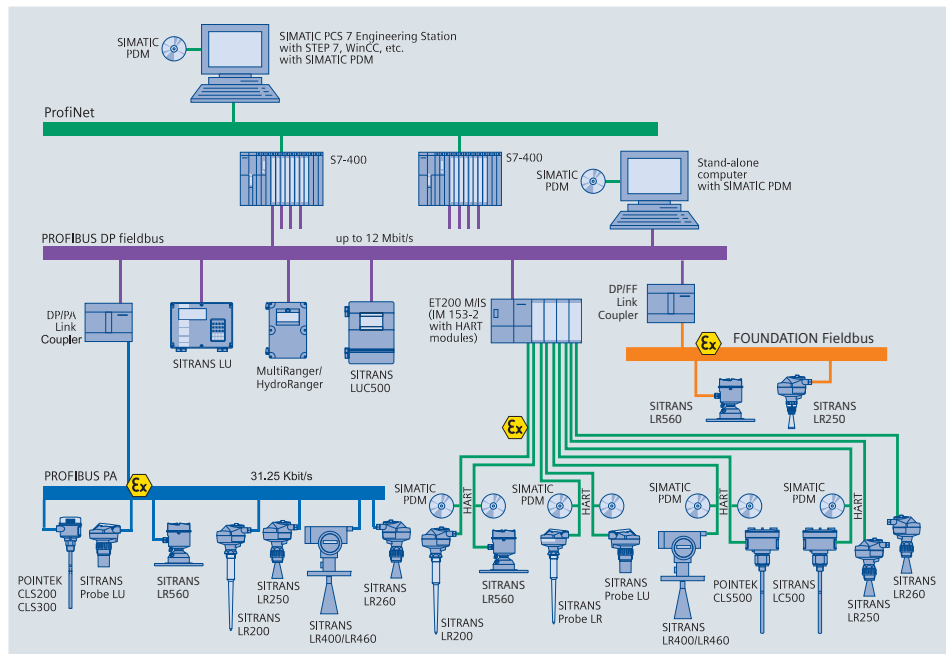

SITRANS RD500

	SITRANS RD500 Remote data manager for monitoring and data logging, web access, and alarming
# of IO	<ul style="list-style-type: none"> • 247 serial Modbus devices • 128 conventional IO RTD/TC 4 to 20 mA/0 to 10 V/digital (optional 16 modules)
Input	0 to 10 V, 0 (4) to 20 mA, RTD, TC, digital and Modbus (RS-485, RS-232)
Output	<ul style="list-style-type: none"> • Ethernet Option • GSM, GPRS, PSTN
Memory	<ul style="list-style-type: none"> • On-board user memory: 4 MB of non-volatile Flash memory • On-board SDRAM: 2 MB • Memory card: Compact Flash Type II slot for Type I and Type II cards; 2 GB max.
Rated operating conditions	<ul style="list-style-type: none"> • Storage temperature: -30 to 70 °C (-22 to 158 °F) • Operating temperature: 0 to 50 °C (32 to 122 °F) • Humidity: 80% max relative humidity, non-condensing, from 0 to 50 °C (32 to 122 °F)
Enclosure	High impact plastic and stainless steel; installation category I; Pollution degree 2
Mounting	Snaps onto standard DIN style top hat (T) profile mounting rails according to EN50022 -35 x 7.5 and -35 x 15
Power	<ul style="list-style-type: none"> • 24 V DC ±10% • 400 mA min. (1 module) • 3.5 Amps max. (16 modules) • Class 2 or SELV-rated power supply
Safety certificates and approvals	<ul style="list-style-type: none"> • UL Listed to U.S. and Canadian safety standards UL508 and CSA C22.2 No. 14-M05 (File No. E302106) • IEC 61010-1, EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use, Part1 • C-TICK

Communications

Totally Integrated Automation

With Totally Integrated Automation (TIA), Siemens provides a comprehensive, integrated product and system spectrum for the efficient automation of the entire production process. TIA enables realization of perfectly tailored automation solutions to meet all individual production requirements. Thanks to the uniquely integrated qualities of TIA, companies are able to optimize their production processes, accelerate time to market, and reduce production costs – while maintaining a high level of investment security and minimizing overall project complexity.

PROFIBUS

Siemens offers a range of instruments that connect to a PROFIBUS network. PROFIBUS is the fieldbus standard for complete production plants in all process sectors, and helps manufacturers achieve operational excellence and cost savings throughout the complete service life. It is the network solution with the most advantages for Totally Integrated Automation (TIA) providing digital communication between the automation system and field instrumentation on a single serial bus cable. Many Siemens level instruments have a PROFIBUS option and support PROFIBUS PA or PROFIBUS DP.

HART

HART is a serial transfer protocol used to transfer additional parameter data such as measurement range and configuration to the connected device through a 4 to 20 mA power loop. SIMATIC PDM can use this protocol to communicate configuration data to an instrument. Siemens offers HART as an option on many of its level instruments.

FOUNDATION Fieldbus

FOUNDATION Fieldbus (FF) is designed for the process industry. The instrumentation on this bus can be Intrinsically Safe, and can be powered, configured, and monitored over the bus.

FOUNDATION Fieldbus is similar to PROFIBUS PA, Siemens preferred network connection. Siemens now offers instrumentation with FF and implements FF systems.

Model 475/375 HART field communicator and Emerson AMS

The handheld HART 475/375 field communicator and Emerson AMS software are EDD-based configuration and diagnostic tools for HART and Foundation Fieldbus devices. They both support the HART Communication Foundation (HCF) Library of EDDs. All Siemens HART devices have EDDs in the HCF library. Enhanced EDDs are included on some products providing additional functions such as Quick Start Wizards.

FDT Software SITRANS DTM

Field Device Tool (FDT) is a standard for configuration software that uses alternative technology to EDD based software such as PDM. We support this technology via the use of SITRANS DTM.

To configure a field instrument, the FDT frame application (such as FIELDcare, or PACTware, or PRM) requires that a DTM is written for that instrument. SITRANS DTM is an Electronic Device Description Language (EDDL) interpreter that takes an Electronic Device Description (EDD) written for an instrument and creates a virtual DTM for that instrument.

SIMATIC PDM software

SIMATIC PDM (Process Device Manager) is a manufacturer-independent software tool for the operation, configuration, parameterization, maintenance, and diagnosis of intelligent field instruments. Based on the EDD standard, it can be used independently of a specific automation system via a PC or programming device or as an integral part of the SIMATIC PCS 7 process automation system. Core functions include:

- Setup and modification of parameters
- Comparison
- Plausibility checks
- Data management
- Commissioning functions

SIMATIC PDM offers communications via HART protocol, PROFIBUS DP, PROFIBUS PA, or other protocols.

Siemens has written a number of Enhanced EDDs for SIMATIC PDM. These EDDs include additional functions such as Quick Start Wizards and the saving of echo profiles. You will see a standard look and feel for all Siemens process instruments.

PROFIBUS DP, Modbus RTU, Allen-Bradley Remote I/O and DeviceNet via SmartLinX

SmartLinX provides direct digital connection to commonly used industrial communication buses with true plug-and-play compatibility. Cards are available for PROFIBUS DP, Modbus RTU, Allen-Bradley Remote I/O, and DeviceNet. SmartLinX modules are fast and easy to install, and can be added at any time.

For use with SITRANS LU, MultiRanger 100/200, HydroRanger 200, and SITRANS LUC500.

Dolphin Plus configuration software

Dolphin Plus is instrument configuration software for:

- SITRANS LU
- SITRANS LUC500

It helps you configure, monitor, tune, and diagnose these instruments either remotely from your desktop PC or connected directly in the field using a laptop.

PI Training

Maximize your skills with factory certified training

Industry Sector SC PI2 provides a full schedule of Process Instrumentation training opportunities for Siemens employees, channel partners, and customers. The PI T courses are designed for new sales and service employees to learn the product lines, the technologies, and the applications. The courses are also prerequisites for the advanced technology courses which provide in-depth application training. Designed for hands-on learning, all courses are led by field-tested instructors who combine extensive application and instrumentation knowledge with seasoned training experience. Our PI Training Center is specifically designed to optimize your classroom time. It is fully equipped with application simulation stations, a full range of PI instruments, and complete industrial communication networks.

For current information and schedules, visit our website at:
www.siemens.com/instrumentation/training/canada
or contact us by phone at 1 705-740-7650.

PI 2 Webinars

Are you unable to make it to a class?

Siemens offers a wide selection of webinars led by product experts to complement your training. To be added to our webinar invitation list, please send a request to:

pswebinars.smpi@siemens.com
