1. Introduction

 For safety reasons it is important that the following points, especially the points marked with a warning sign, are read and understood before the system is being installed:

- Installation, connection, commissioning and service must be carried out by persons who are qualified and authorized to do so.
- It is very important that the same people have read and understood the instructions and directions provided in this manual and that they follow the instructions and directions before putting the equipment into use!
- People who are authorized and trained by the owner of the equipment may operate the equipment.
- The installation must ensure that the measuring system is correctly connected and is in accordance with the connection diagram. The transmitter has to be earthed by means of 4 mm² potential equalising conductor.
- In applications where the operating pressure or media can be hazardous in the event of a pipe failure, we recommend that special precautions are taken during the installation of the sensor, such as sensor location, guarding or the use of a pressure relief valve.
- Siemens Flow Instruments can provide assistance with the selection of sensor parts in contact with the media. However, the full responsibility for the selection rests with the customer and Siemens Flow Instruments can take no responsibility for any failure due to material incompatibility.
- Equipment used in hazardous areas must be Ex-approved and marked . It is required that the "Special Conditions for Safe Use" provided in the manual and in the Ex certificate must be followed!
- Installation of the equipment must comply with national regulations. Example EN 60079-14 for the European Community.
- Repair and service can be done by approved Siemens Flow Instruments personnel only.

2. Installation

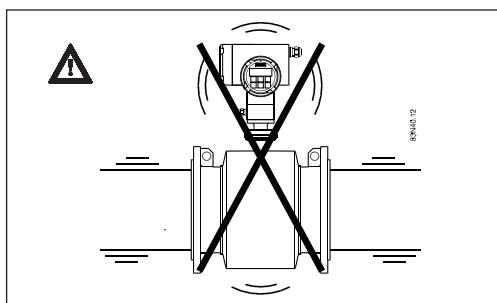

2.1 Installation of transmitter

Installation of transmitter can be remote or compact mounted.

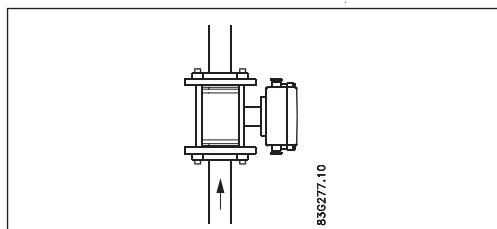

2.2 Installation of sensor

Hazardous area

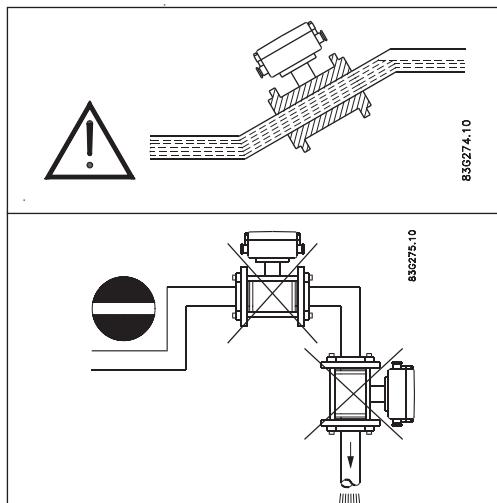

**Vibrations**

Strong vibrations should be avoided.

In applications with strong vibrations, we recommend remote mounting of both the MAG 6000 I and the MAG 6000 I Ex d transmitter.

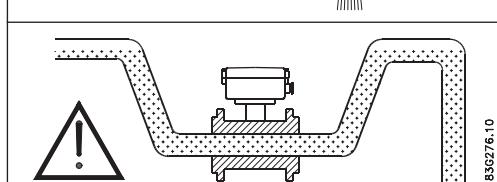

**Category 2 equipment**

Both the Ex sensor and the MAG 6000 I Ex transmitter, in remote or compact configurations, may be mounted in Ex zone 1 or 2.

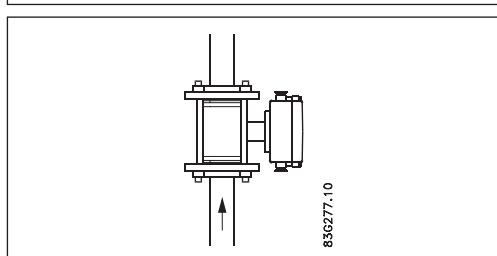

Therefore avoid:

- Installation at the highest point in the pipe system
- Installation in vertical pipes with free outlet

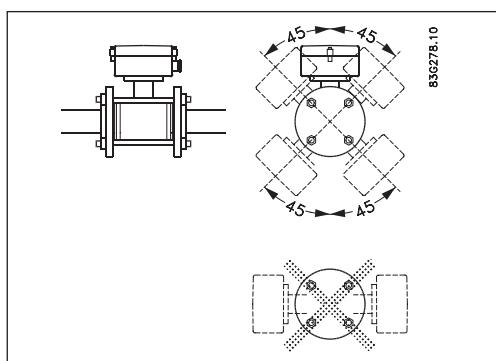

For partially filled pipes or pipes with downward flow and free outlet the flowmeter should be located in a U-tube.

**Installation in vertical pipes**

Recommended flow direction: upwards. This minimizes the effect on the measurement of any gas/air bubbles in the liquid.

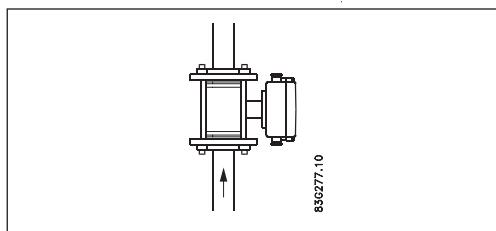

2.2 Installation of sensor (continued)

Installation in horizontal pipes

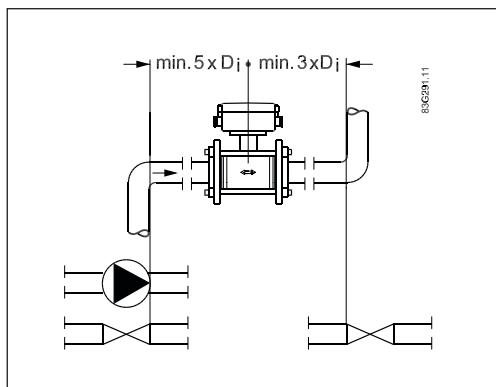

The sensor must be mounted as shown in the upper figure. Do not mount the sensor as shown in the lower figure. This will position the electrodes at the top where there is possibility for air bubbles and at the bottom where there is possibility for mud, sludge, sand etc.

If using empty pipe detection the sensor can be tilted 45°, as shown in the upper figure.

Measuring abrasive liquids and liquids containing particles

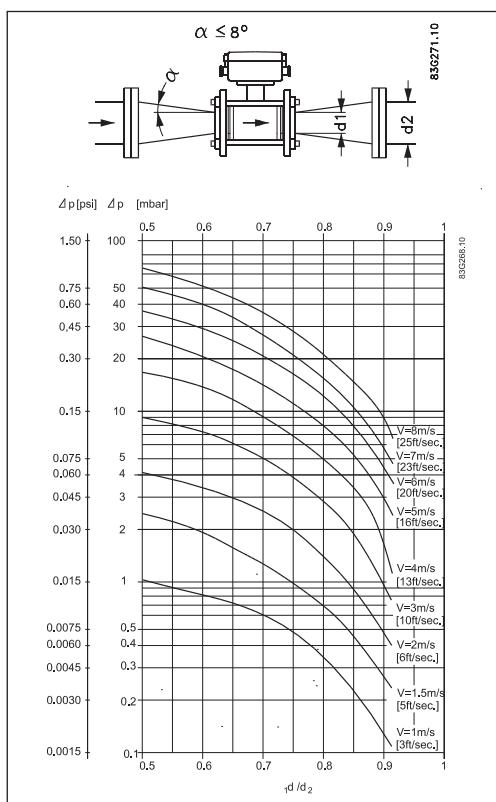

Recommended installation is in a vertical/inclined pipe to minimize the wear and deposits in the sensor.

Inlet and outlet conditions

To achieve accurate flow measurement it is essential to have straight lengths of inlet and outlet pipes and a certain distance between pumps and valves.

It is also important to centre the flowmeter in relation to pipe flanges and gaskets.

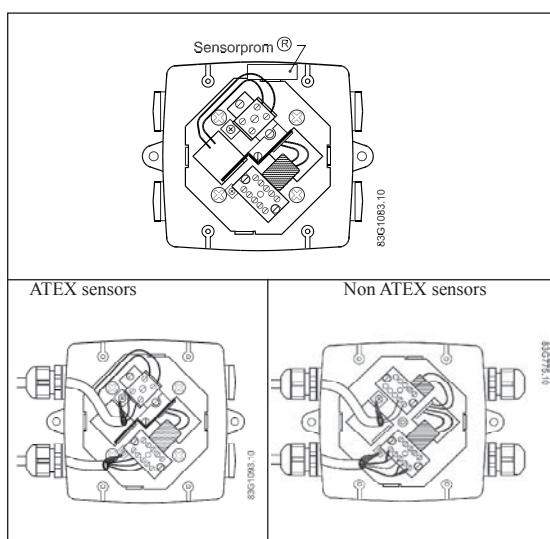

Installation in large pipes/pressure drop

The flowmeter can be installed between two reducers (e.g. DIN 28545). Assuming that at 8° the following pressure drop curve applies. The curves are applicable to water.

Example:

A flow velocity of 3 m/s (V) in a sensor with a diameter reduction from DN 100 to DN 80 ($d_1/d_2 = 0.8$) gives a pressure drop of 2.9 mbar.

2.3.1 Remote installation - At the sensor

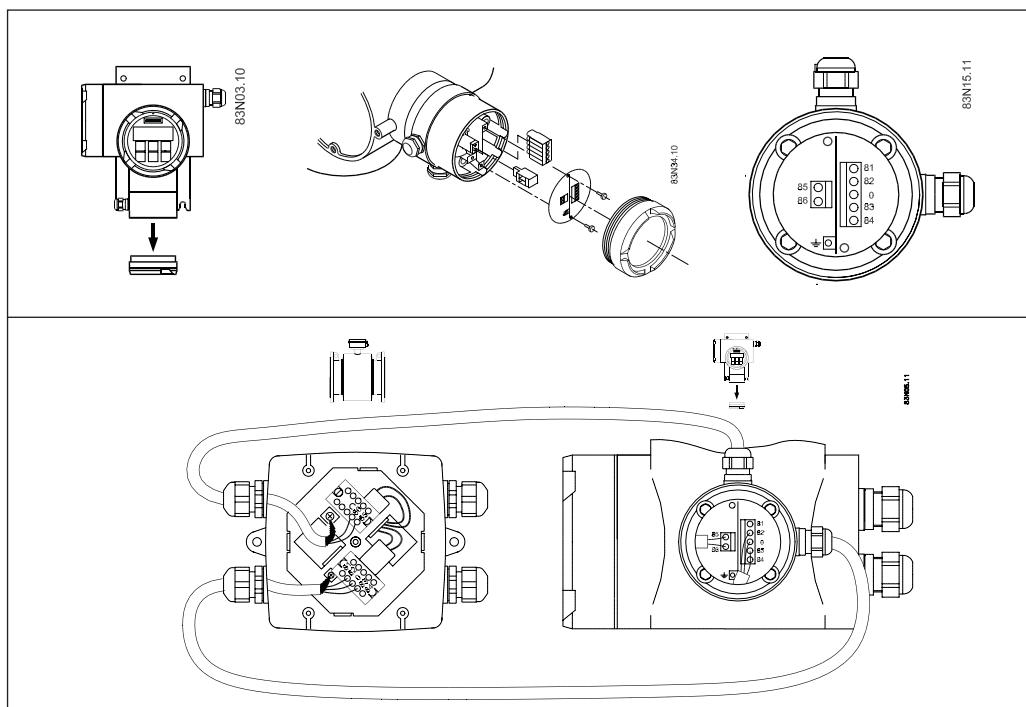

Remove the SENSORPROM unit from the sensor and mount it in the terminal block in the transmitter.

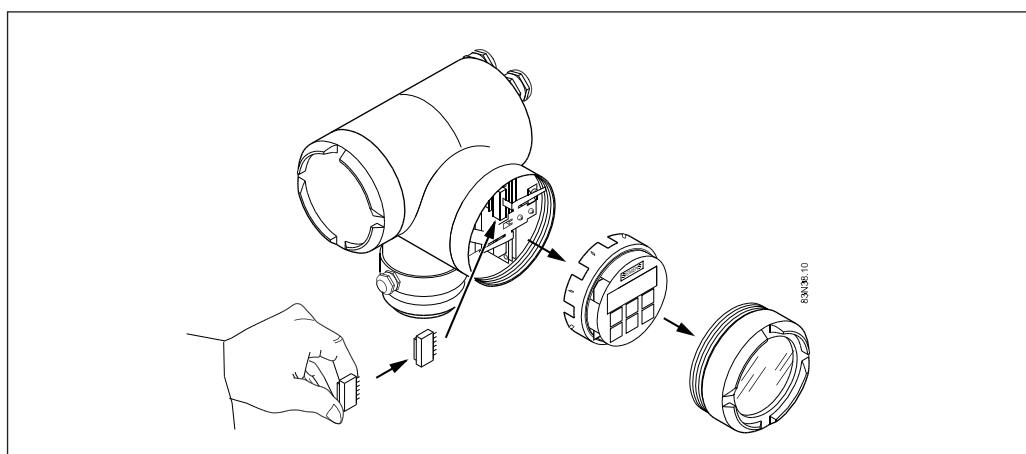

2.3.2 Remote installation - Transmitter

*No power up with open lid -
Do **not** open lid while power on*

Fit the SENSORPROM memory unit in the transmitter.
The SENSORPROM unit is supplied with the sensor in the terminal box.

2.4 Ex survey according to Directive 94/9/EC (ATEX)

as an example:

II	2G	Ex	d	IIC	T3-T6
----	----	----	---	-----	-------

Instrument groups	
I	Applies to instruments used in underground mining operations, as well as their above ground operations, which can be endangered by mine gas and/or flammable dusts.
II	Applies to instruments used in the remaining areas which can be endangered by a potentially explosive atmosphere.

Instrument category		Definition
Labeling with gases	Labeling with dusts	
1G (0)	1D (20)	Instruments of this category are for use in areas where ignitable atmospheres, caused by a mixture of air and gasses, vapours or mists or by dust/air mixtures, can exist all of the time or for long periods of time or else frequently.
2G (1)	2D (21)	Instruments of this category are for use in areas where ignitable atmospheres caused, by a mixture of air and gasses, vapours or mists or by dust/air mixtures, can exist some of the time.
3G (2)	3D (22)	Instruments of this category are for use in areas where ignitable atmospheres, caused by a mixture of air and gasses, vapours or mists or by dust/air mixtures, are not likely to exist. However, if they do occur then in all probability, only seldom or for short periods of time.

(The figures in brackets refer to IEC)

Explosion protected electrical equipment = Ex

Type of protection

Ex protection labelling in square brackets refers to "Associated electrical equipment"

o	Oil encapsulated	i	Intrinsic safety (ia, ib)
p	Pressurized apparatus	n	Non-incentive equipment

**MAG 1100, MAG 1100 F &
MAG 3100
EEx ia IIB T3...T6**

Category 2 equipment

Sensors may be installed in zone 1 and zone 2.

Sensors intrinsically safe data

See table below.

All MAG 1100 Ex and MAG 3100 Ex sensors have the following ratings and input parameters:

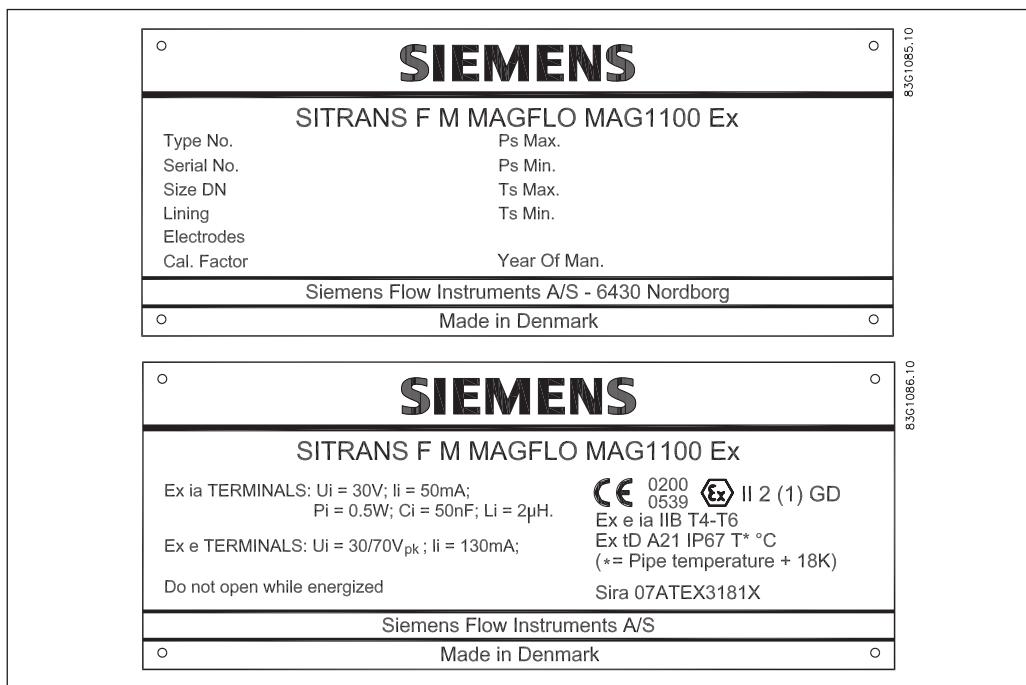

IS data sensor

MAG 1100 DN 2 - 100
MAG 1100 F DN 10 - 100
MAG 3100 DN 15 - 2000

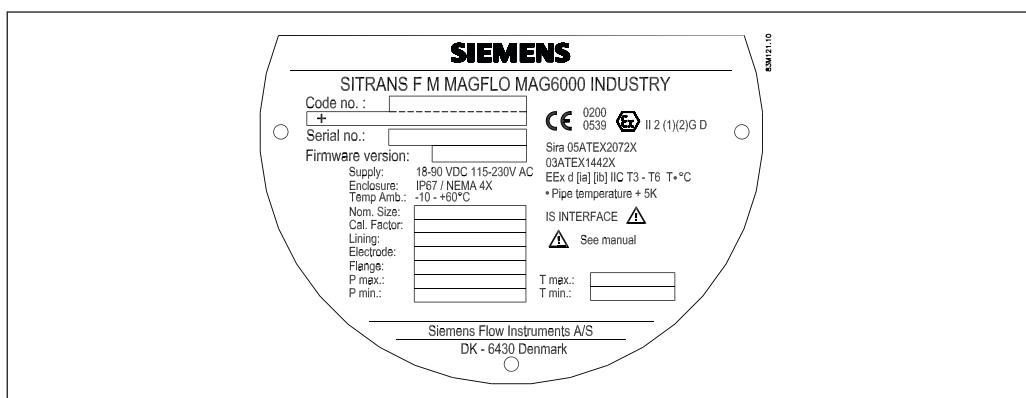

Terminals	85-86 coil	82-83 electrode
U _i	-	30 V
I _i	-	50 mA
P _i	-	0.5 W
L _i	-	20 μ H
C _i	-	50 nF

2.6 Device identification

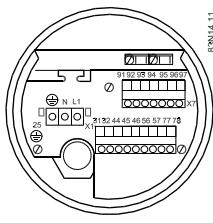

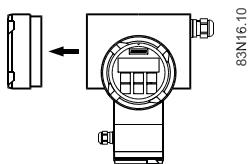

**Example label, sensor
remote MAG 1100 Ex**

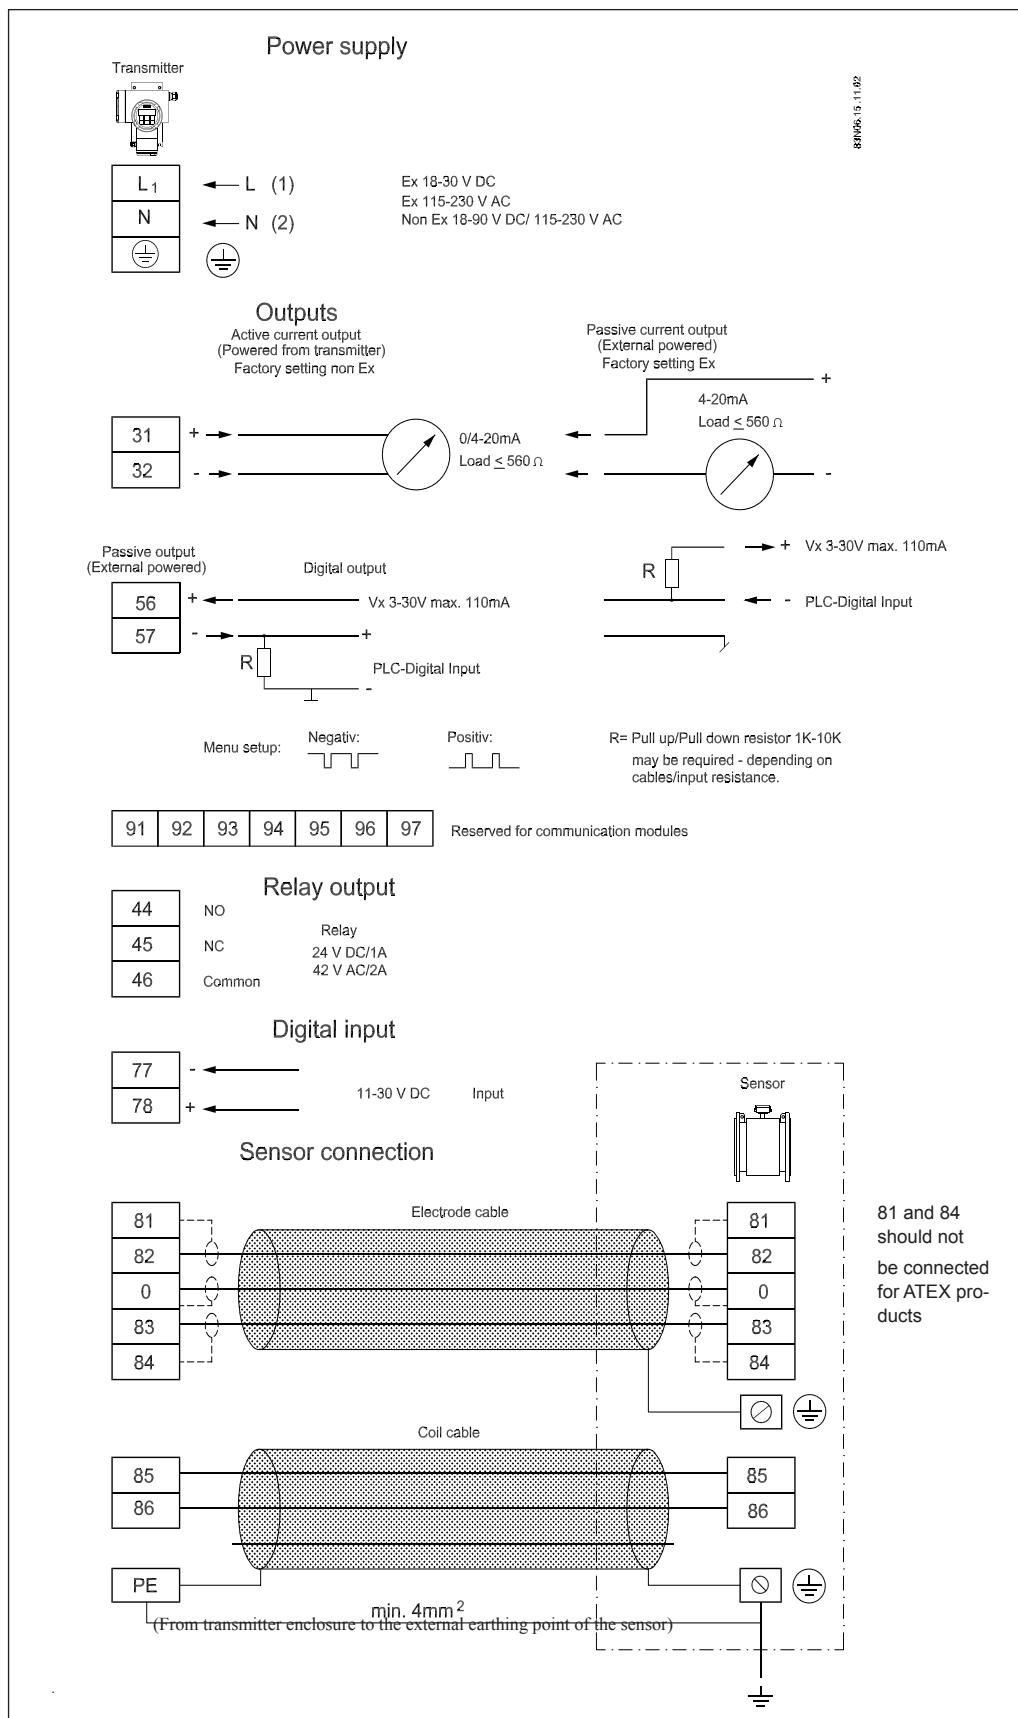

**Example label, transmit-
ter type MAG 6000 I (Ex d)
compact**

3.1 Transmitter type MAG 6000 I and MAG 6000 I Ex d

For Ex intrinsically safe specifications, refer to section 2.5

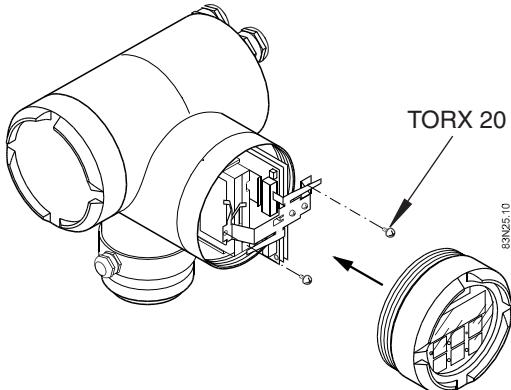

Potential Hazards Grounding

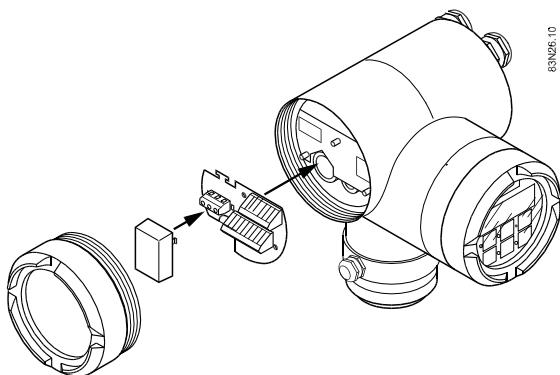

Grounding The mains protective earth wire must be connected to the PE terminal in accordance with the diagram (class 1 power supply).

**Power off when
opening the
transmitter**

When reassembling the unit, make sure that the 2 screws are properly tightened in order to ensure a correct assembly and a proper ground connection.

Cover/insulate the power supply terminals with the plastic cover (to secure sufficient insulation).

Installation

- 1) Mains supply 115 to 230 V AC from building installation Class II. A switch or circuit-breaker (max. 15 A) shall be included in the building installation. It must be in close proximity to the equipment and within easy reach of the OPERATOR, and it shall be marked as the disconnecting device for the equipment.
- 2) **The mains protective earth wire must be connected to the PE terminal, if the earth wire is not connected, personnel can be exposed to 115V/230V.**
Required cable min. AGW16 or 1.5 Cu wire.

For field wiring installation **National Installation Code** shall be met of the country, where the flowmeters are installed.

Main voltage terminals must be out of reach for OPERATOR to avoid any hazards!

Intrinsically safe terminals!

It is an absolute requirement that the wires/terminals of the intrinsically safe circuits **cannot** get into contact with the wires of the other cables. The distance between cables/wires therefore must be at least 50 mm or otherwise protected.

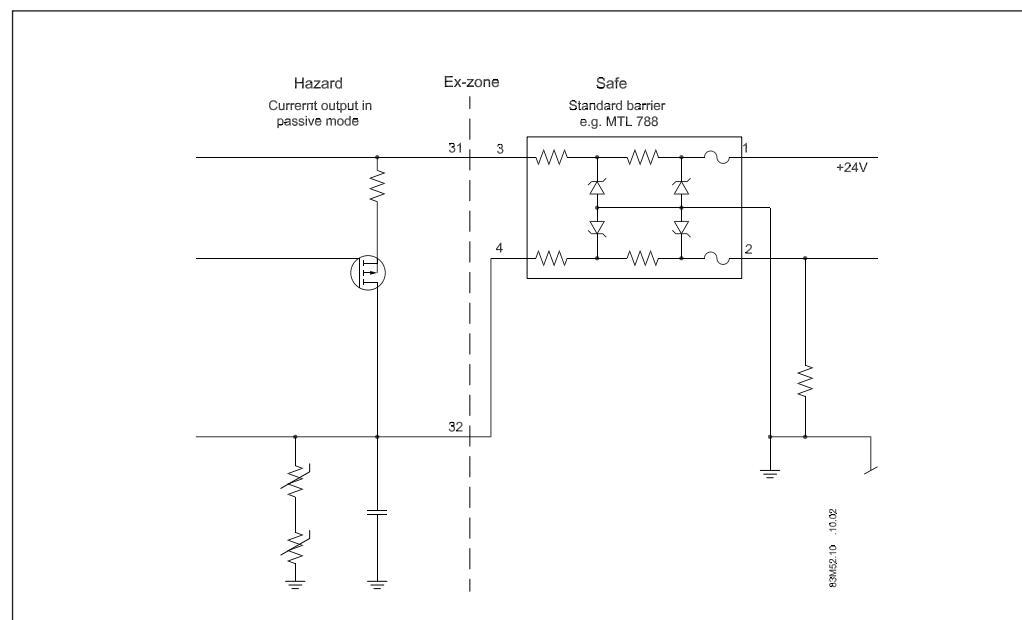

It is recommended to fasten the cables/wires in a way that they, even in case of an error, **cannot** get into contact with each other. Make the wire ends as short as possible.

Digital output

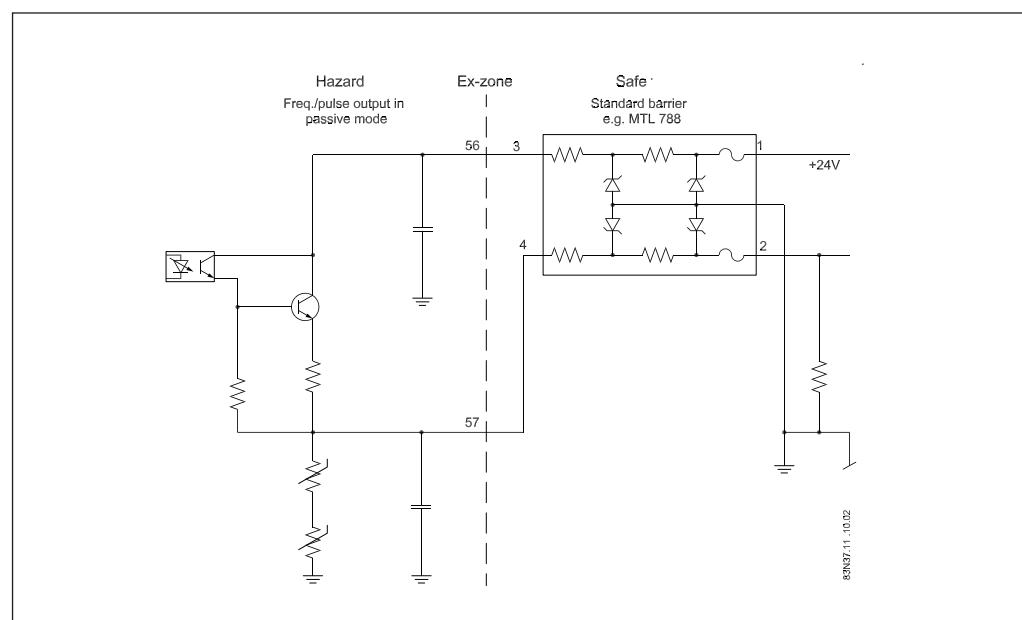

If the internal resistance of the loads exceeds 10KΩ, it is recommended to connect an external 1-10 KΩ load resistor in parallel to the load.

3.2 Installation examples

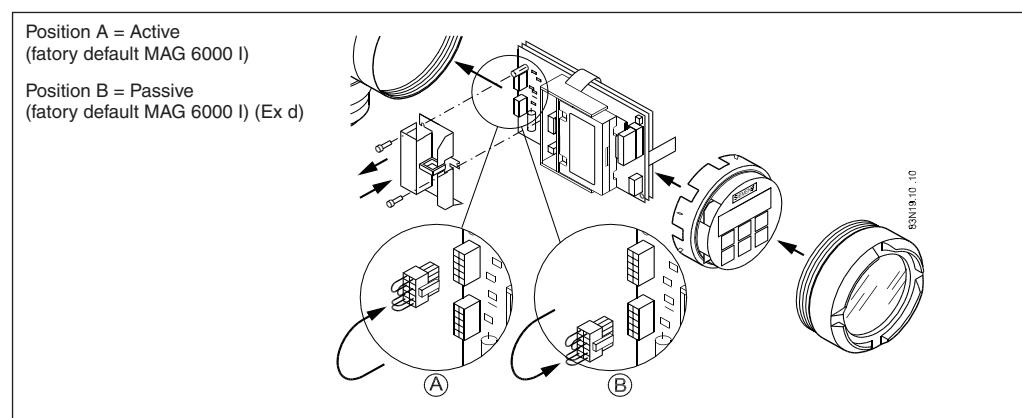

Current output in passive mode

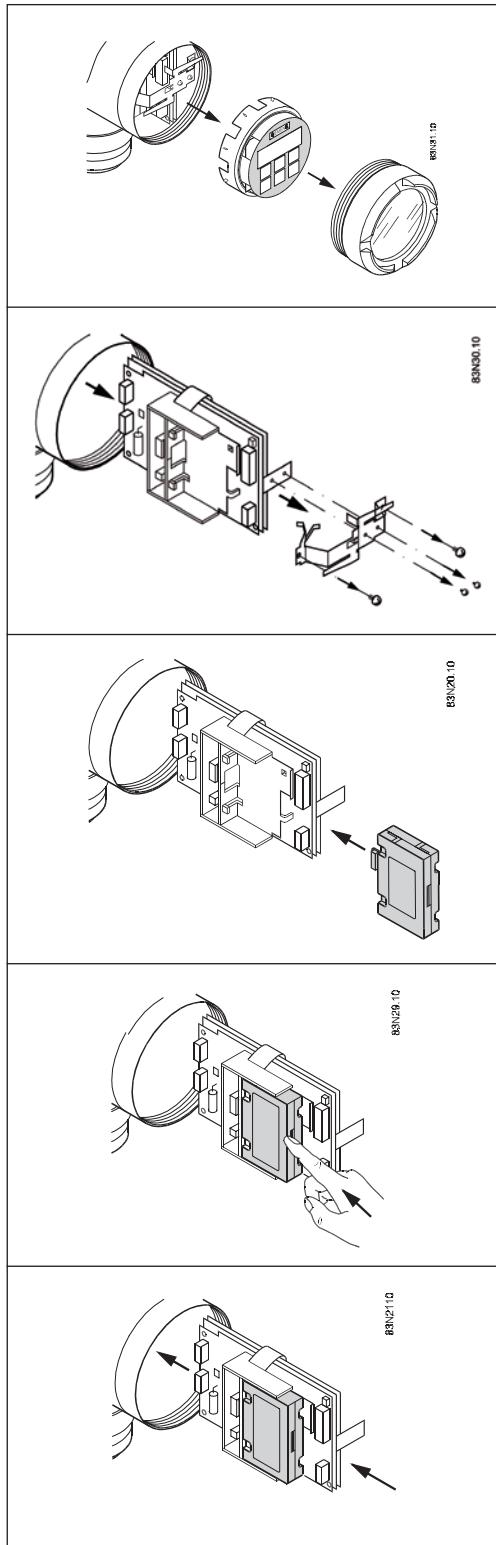

Frequency/pulse output in passive mode

Active/passive current output

At the MAG 6000 I the current output terminal 31, 32 can be switch between active mode (transmitter powered) to passive mode default (external powered).

3.2.1 Add-on communication module

1. Open transmitter.
2. Remove electronic insert.
3. Unpack the module and fit into module holder.
4. Press the add-on module in the direction shown, until it stops and is firmly seated in position.
5. Re-insert the complete transmitter module in reverse order.

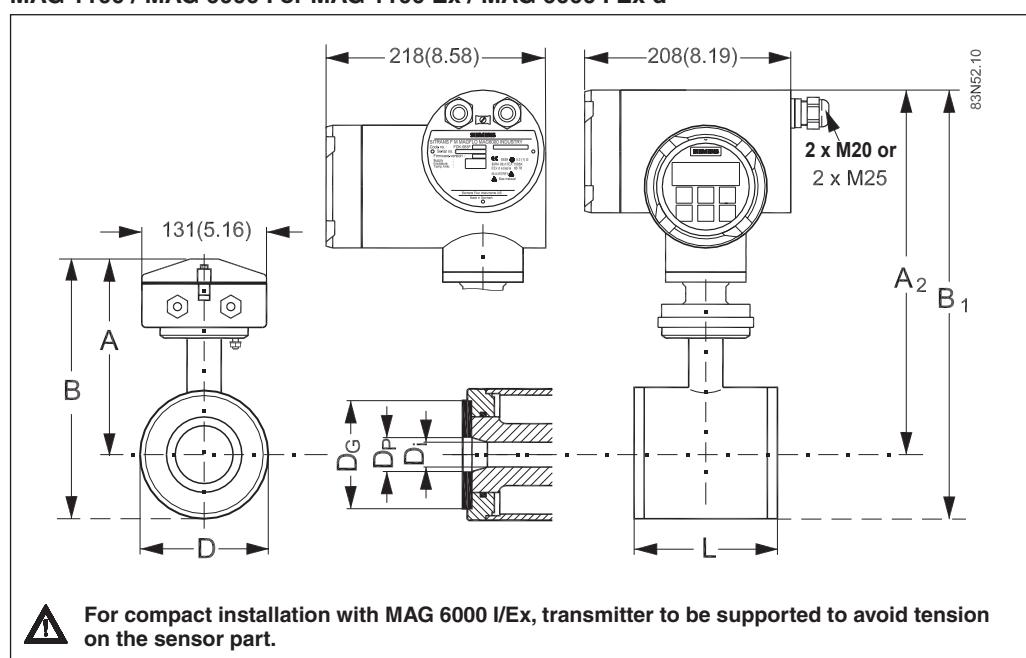

4. Technical data

4.1.1 Dimensions and weight

		NSF/ANSI Standard 61 (Cold water, US)			
Approvals	PED (All EN1092-1 flanges conforms to PED) – 97/23 EC ¹⁾ CRN				

¹⁾ For sizes greater than 600 mm PED conformity is available as a cost added option, the basic unit will only carry the LVD (Low Voltage Directive) and EMC approval.

**4.3 Transmitter type
MAG 6000 I
Accuracy 0.20% or
0.40%**

Mode of operation and design	
Measuring principle	Electromagnetic with pulsed constant field
Empty pipe	Detection of empty pipe (special cable required in remote mounted installation)
Excitation frequency	Depend on sensor size
Electrode input impedance	$> 1 \times 10^{14} \Omega$
Input	
Digital input	DC 11...30 V, $R_i = 4.4 \text{ k}\Omega$
• Activation time	50 ms
• Current	$I_{DC} 11 \text{ V} = 2.5 \text{ mA}$, $I_{DC} 30 \text{ V} = 7 \text{ mA}$
Output	
Current output	
• Signal range	0...20 mA or 4...20 mA (active/passive)
• Load	$< 560 \Omega$
• Time constant	0.1 ... 30 s, adjustable
Digital output	
Frequency	0 ... 10 kHz, 50% duty cycle (uni-/bidirectional)
Time constant	0.1 ... 30 s, adjustable
Pulse (passive)	3 ... 30 V DC, max 110 mA (30 mA Ex version), $200 \Omega \leq R_i \leq 10 \text{ k}\Omega$ (powered from connected equipment)
Time constant	0.1 ... 30 s, adjustable
Relay output	
Time constant	Changeover relay, same as current output
Load	42 V AC/2 A, 24 V DC/1A
Low flow cut off	0...9.9% of maximum flow
Galvanic isolation	All inputs and outputs are galvanic isolated
Max. measuring error	
MAG 6000 I/MAG 6000 I Ex d	0.20% or 0.40% of rate
Rated operation conditions	
Ambient temperature	
• Operation	
- MAG 6000 I	-20 ... +60°C (-4 ... +140°F)
- MAG 6000 I Ex	-10 ... +60°C (+14 ... +140°F)
• Storage	-40 ... +70°C (-40 ... +158°F)
Mechanical load	18...1000 Hz random in x, y z, directions for 2 hours according to EN 60068-2-36Transmitter: 1.14 grms
Degree of protection	IP67/NEMA 4X to IEC 529 and DIN 40050 (1 mH ₂ O 30 min.)
EMC performance	EN 61326
Display and keypad	
Totalizer	Two eight-digit counters for forward, net or reverse flow
Display	Background illumination with alphanumeric text, 3 x 20 characters to indicate flow rate, totalized values, settings and faults;
Reverse flow indicated by negative sign	
Keypad	Capacitive touch keypad with LED light for feedback indication
Time constant	Time constant as current output time constant

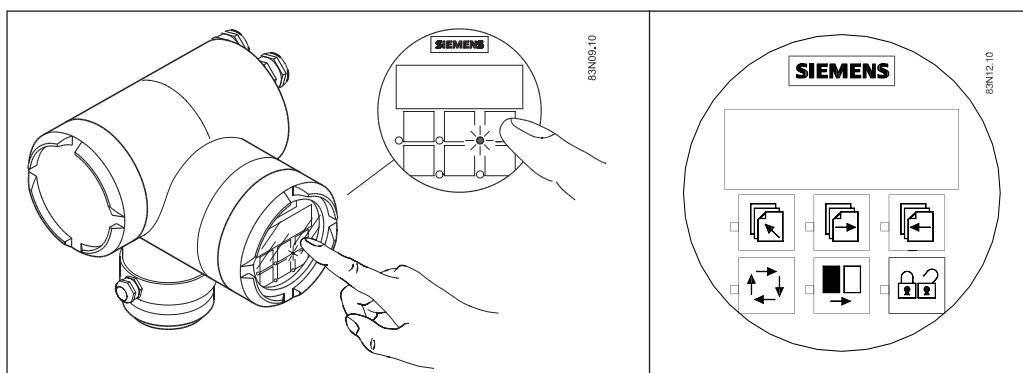

Design	
Enclosure material	Die cast aluminium, painted
• Wall mounting	Wall mounting bracket enclosed for remote version
Dimensional drawings	See dimensional drawings
Weight	See dimensional drawings
Power supply	
	Non Ex d: 18...90 V DC; 115...230 V AC; 50...60 Hz
	Ex d: 18...30 V DC
	Ex d: 115...230 V AC; 50...60 Hz
Power consumption	230 V AC: 21.5 VA 24 V DC: 12 W, $I_N \leq 380$ mA, $I_{ST} \leq 1$ A (3 ms)
Certificates and approvals	
MAG 6000 I	CE C-tick FM Class 1, div 2 FM Class 1, Zone 2 CSA Class 1, div 2 CSA Class 1, Zone 2
MAG 6000 I Ex (to be used with ATEX 2G D sensors)	SIRA 03 ATEX 2072X EX II 2 (1) (2) G D EEx d e [ia] ia [ib] ib IIC, T6
Cable entries	
	Remote installation MAG 6000 I: 2 x M25 (for supply/output) and 2 x M16 (for sensor connection) or 2 x ½" NPT (for supply/output) and 2 x M16 (for sensor connection) MAG 6000 I Ex ATEX 2G D: 2 x M20 (for supply/output) and 2 x M16 (for sensor connection)
Communication	
Non ATEX versions	HART, MODBUS RTU/RS 485, PROFIBUS PA, PROFIBUS DP add-on modules
ATEX 2G D	HART, PROFIBUS PA available as integrated version

4.4 Output characteristics MAG 6000 I / MAG 6000 I Ex

	Output characteristics 0-20 mA	Bidirectional mode		Unidirectional mode	
4-20 mA					
Frequency					
Pulse output					
Relay	Power down				
Error relay	No error				
Limit switch or direction switch					
	Low flow (Reverse flow)				
	High flow (Forward flow)				
Batch on digital output					
Batch on relay	Hold				

5. Commissioning

5.1 Keypad and display layout

With the capacitive touch keypad operation is achieved without any open lids. An LED light gives a feedback.

Keypad

The keypad is used to set the flowmeter. The function of the keys is as follows:

TOP UP KEY

This key (hold 2 sec.) is used to switch between operator menu and setup menu. In the transmitter setup menu, a short press will cause a return to the previous menu.

FORWARD KEY

This key is used to step forward through the menus. It is the only key normally used by the operator.

BACKWARD KEY

This key is used to step backward through the menus.

CHANGE KEY

This key changes the settings or numerical values.

SELECT KEY

This key selects the figures to be changed.

LOCK/UNLOCK KEY

This key allows the operator to change settings and gives access to submenus.

Display

The display is alphanumerical and indicates flow values, flowmeter settings and error messages.

The upper line is for primary flow readings and will always show either flow rate, totalizer 1 or totalizer 2. The line is divided into 3 fields.

S: Sign field

P: Primary field for numerical value

U: Unit field

The centre line is the title line (T) with individual information according to the selected operator or setup menu.

The lowest line is the subtitle line (ST) which either will add information to the title line or keep individual information independent of the title line.

F: The alarm field. Two flashing triangles will appear by a fault condition.

M: The mode field. The symbols indicate the following.

	Communication mode		Basic settings		Operator active
	Service mode		Output		Operator inactive
	Operator menu		External input		
	Product identity		Sensor characteristics		
	Language mode		Reset mode		

L: The lock field. Indicates the function of the lock key.

	Ready for change		Access to submenu
	Value locked		RESET MODE: Zero setting of totalizers and initialization of setting

5.2**Menu build-up**

The menu structure of a specific transmitter type is shown in a menu overview map.

Details of how a specific parameter is set is shown in a menu detail map for the specific parameter. A detail map is valid for each type of transmitter if not indicated otherwise. The menu structure is valid for the title and subtitle line only. The upper line is for primary readings only and will always be active with either flowrate, totalizer 1 or totalizer 2.

The menu is built up in two parts. An **operator menu** and a **setup menu**.

Operator menu

The operator menu is for daily operation. The operator menu is customised in the operator menu setup. The transmitter always starts in operator menu No. 1. The page forward and page backward keys are used to step through the operator menus.

Setup menu

The setup menu is for commissioning and service only.

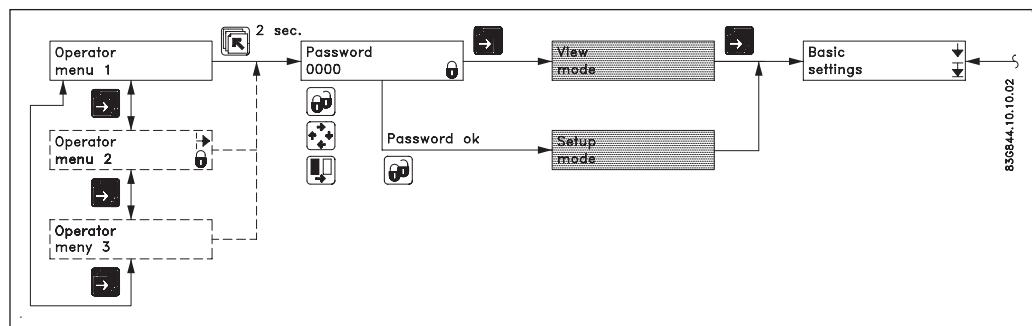

Access to the setup menu is gained by pressing the top up key for 2 seconds. The setup menu operates in two modes:

- View mode
- Setup mode

View mode is a read only mode. The pre-selected settings can only be scanned.

Setup mode is a read and write mode. The pre-selected settings can be scanned and changed. Access to the setup mode is password protected. The factory set password is 1000.

Access to a submenu in the set up menu is gained by the lock key. A short press on a top up key will bring you back to the previous menu. A long press (2 sec.) on the top up key will exit the setup menu and bring you back to operator menu No. 1.

5.2.1
Password

The SETUP MENU can be operated in two different modes:

VIEW MODE (Read only)

CHANGE MODE (Read and write mode)

Access to view mode is always gained by pressing the forward key when in the password menu.

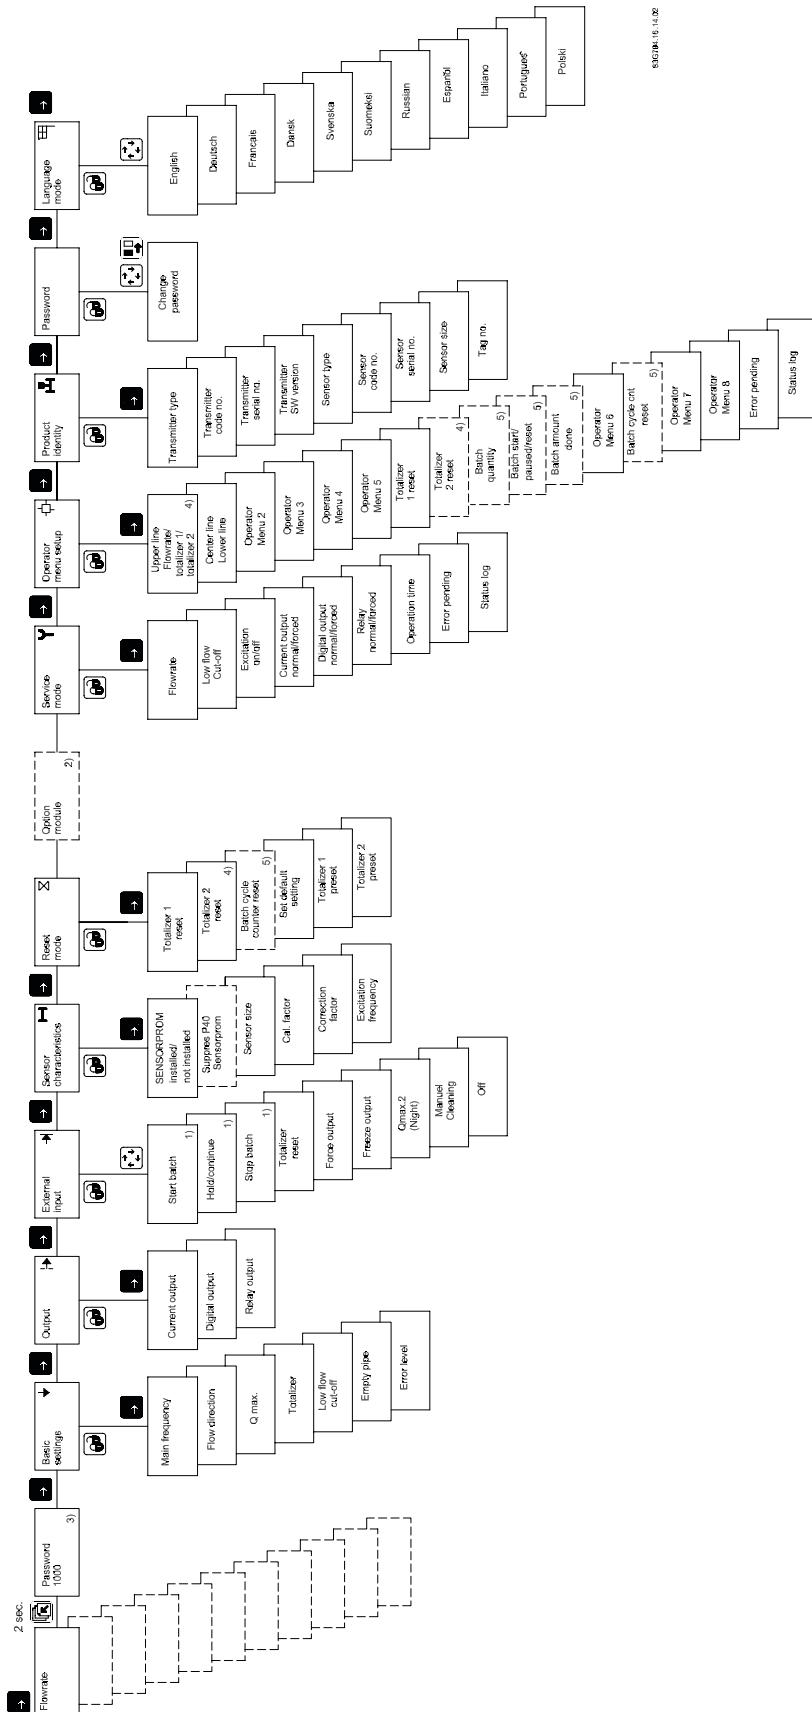

Access to change mode is password protected. The password is factory set to 1000, but can be changed to any value between 1 and 9999 in the change password menu.

The factory setting of 1000 can be re-established as follows:

- Switch off power supply
- Press the TOP UP key and switch on the power supply
- Release the key after ROM and RAM tests are completed

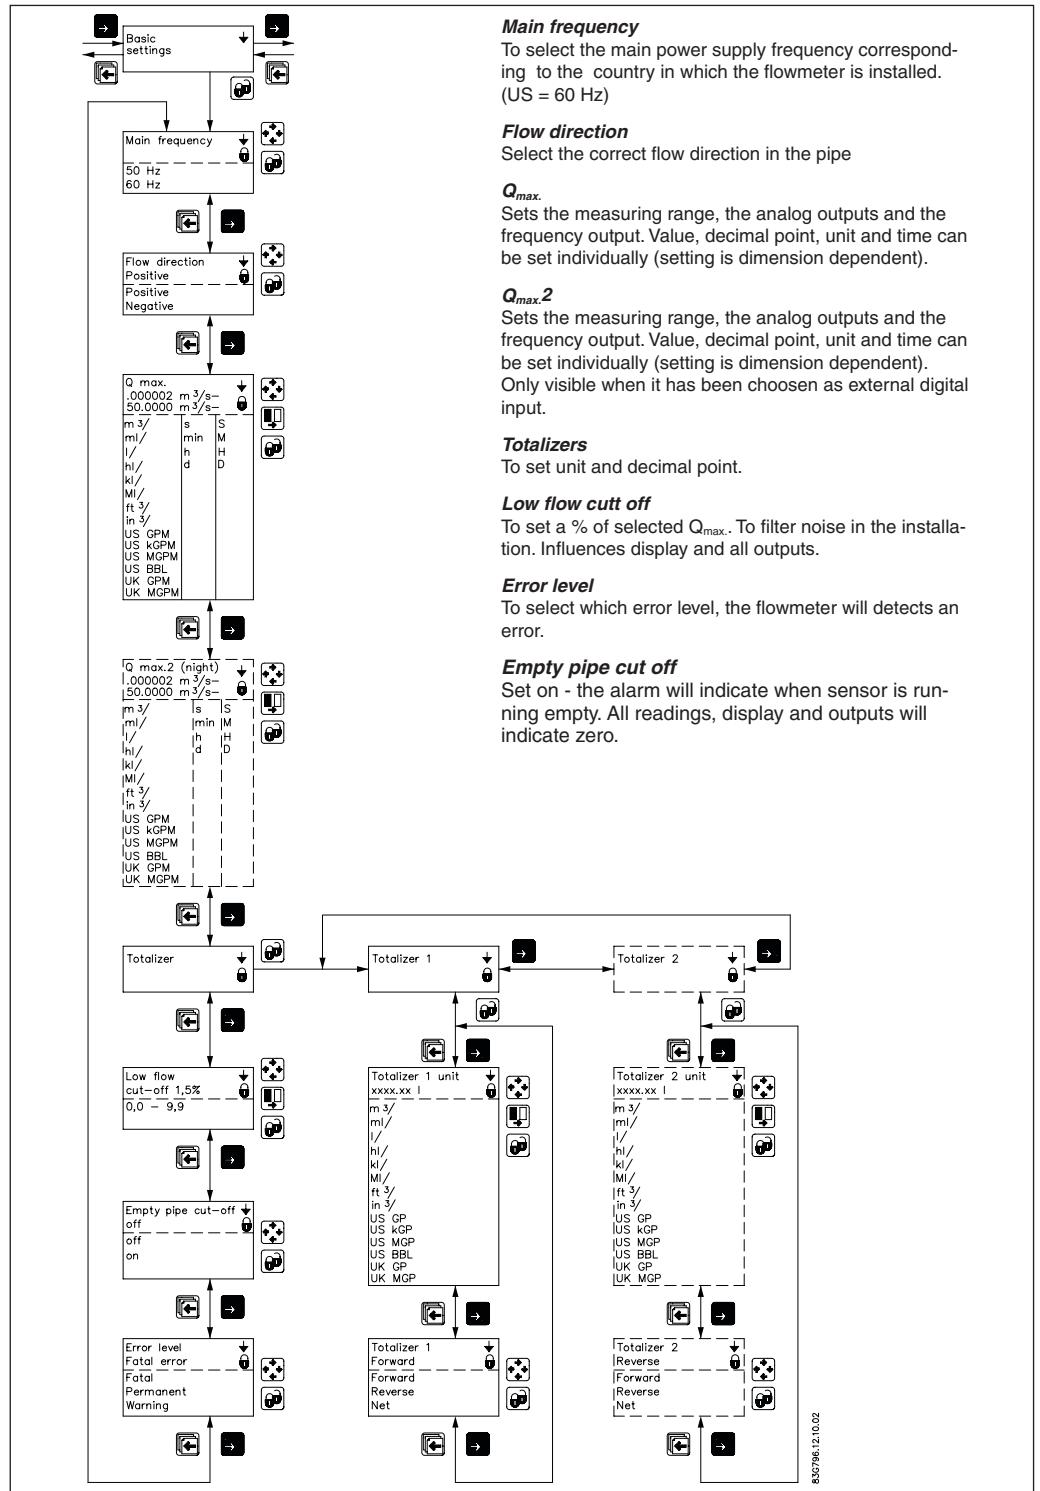

The user code is now reset to 1000.

5.3 MAG 6000 I & MAG 6000 I Ex d

5.4

Basic settings

Comma for flow rate, totalizer 1 and totalizer 2 can be individually positioned.

- open the respective window.
- ensure that the cursor is positioned below the comma. Use the SELECT KEY
- move the comma to the requested position. Use the CHANGE KEY

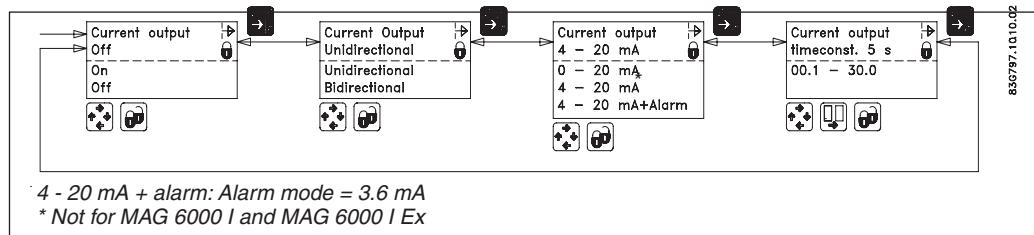

Units are changed by means of the CHANGE KEY with the cursor placed below the unit selected. Select units (cursor moved) by means of the SELECT KEY

Totalizer 2 is not visible when batch is selected as digital output.

$Q_{max.2}$ - is only visible when it has been chosen as external input.

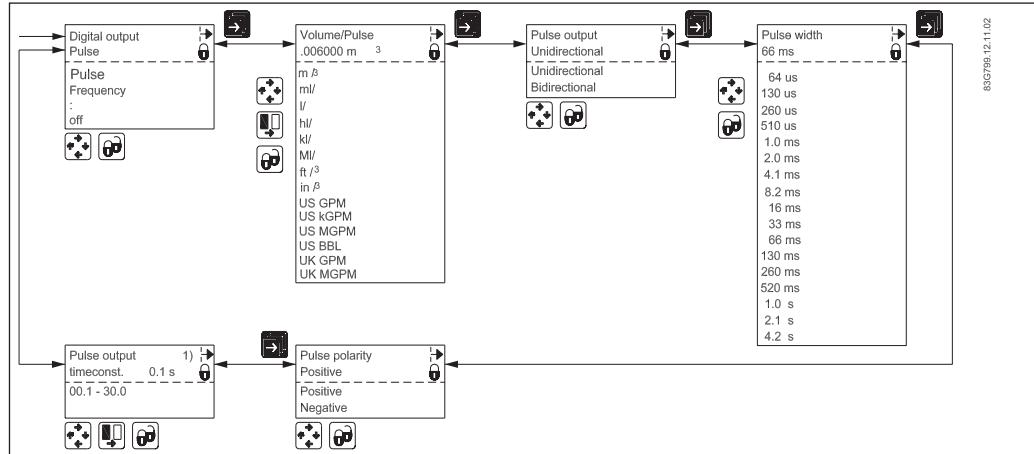

5.4.1 Outputs

Current output
Proportional to flowrate
(Terminal 31 and 32)

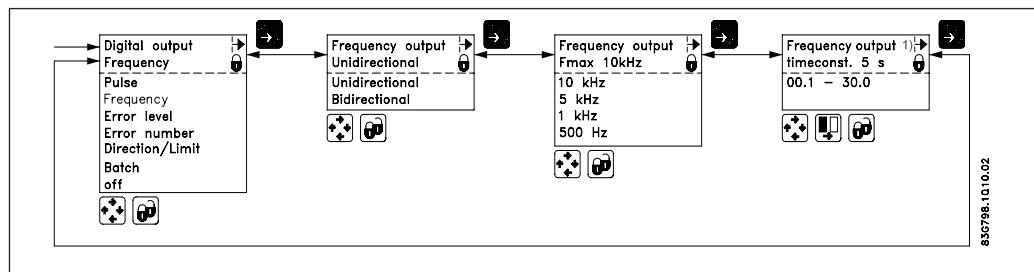

The current output must be set off when not used.

Digital output
Pulse/volume
(Terminal 56, 57)

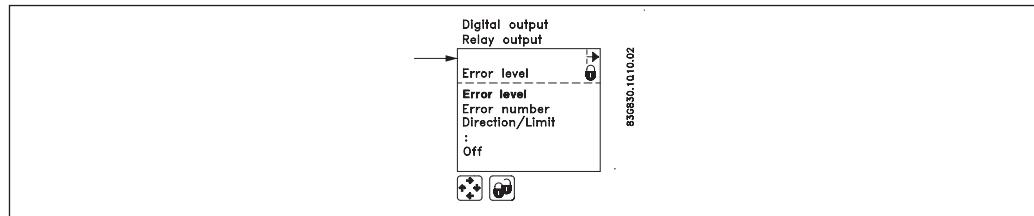

Digital output
Frequency
Proportional to flowrate
(Terminal 56, 57)

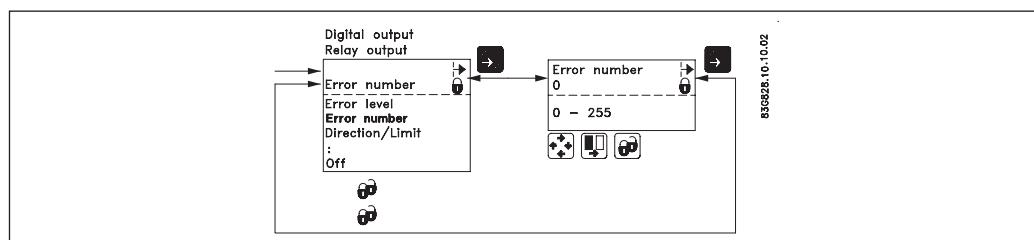

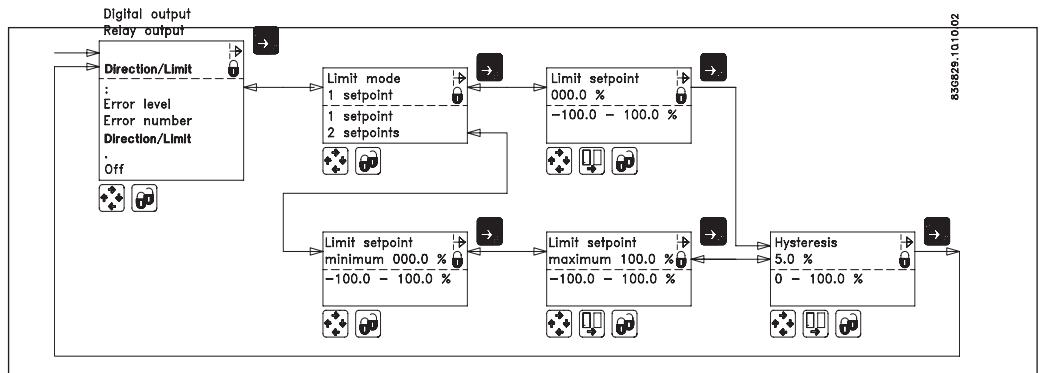

5.4.2 Digital and relay outputs

Error level

Error number

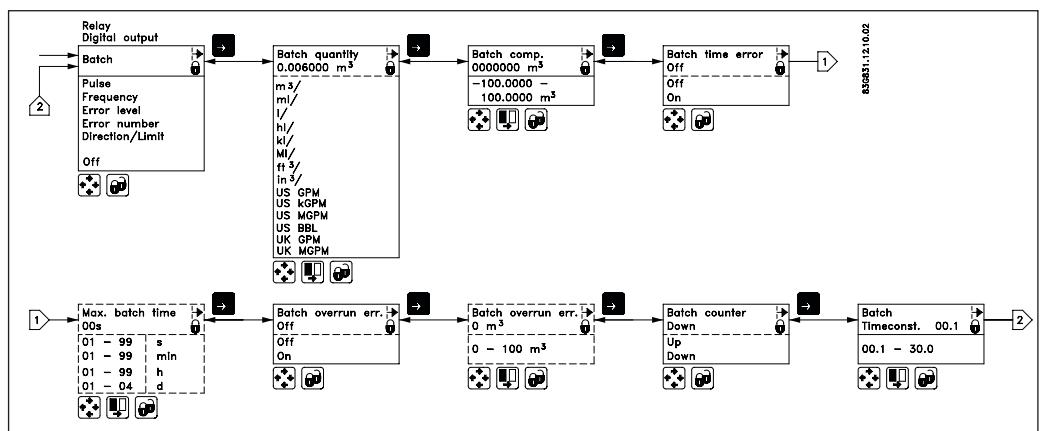

Limit/direction

Limit switches are available for both digital as well as relay output.

Direction mode: 1 set point at 0% flow; hysteresis 5%.

If 2 set points must activate 2 separate outputs, a single set point has to be selected individually for digital as well as relay outputs.

Batch**Note**

When batch function is on relay - the pulse/frequency output is not possible.

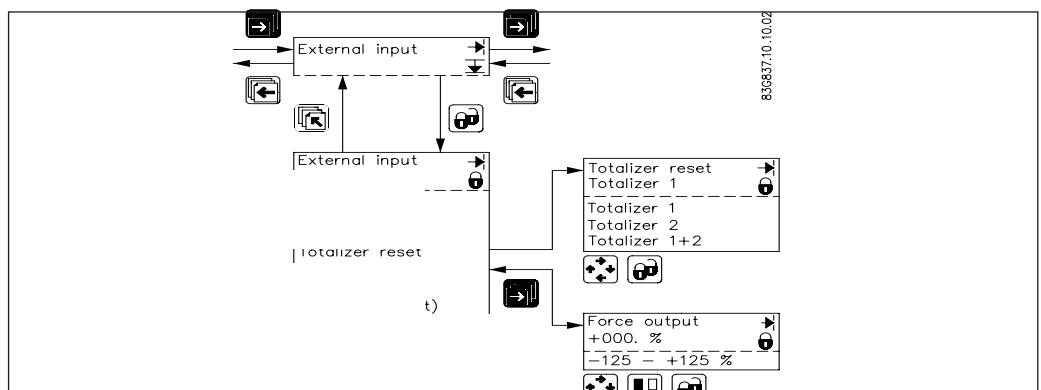

5.4.3 Relay outputs

Cleaning

! Cleaning not possible with MAG 6000 I or MAG 6000 I Ex d

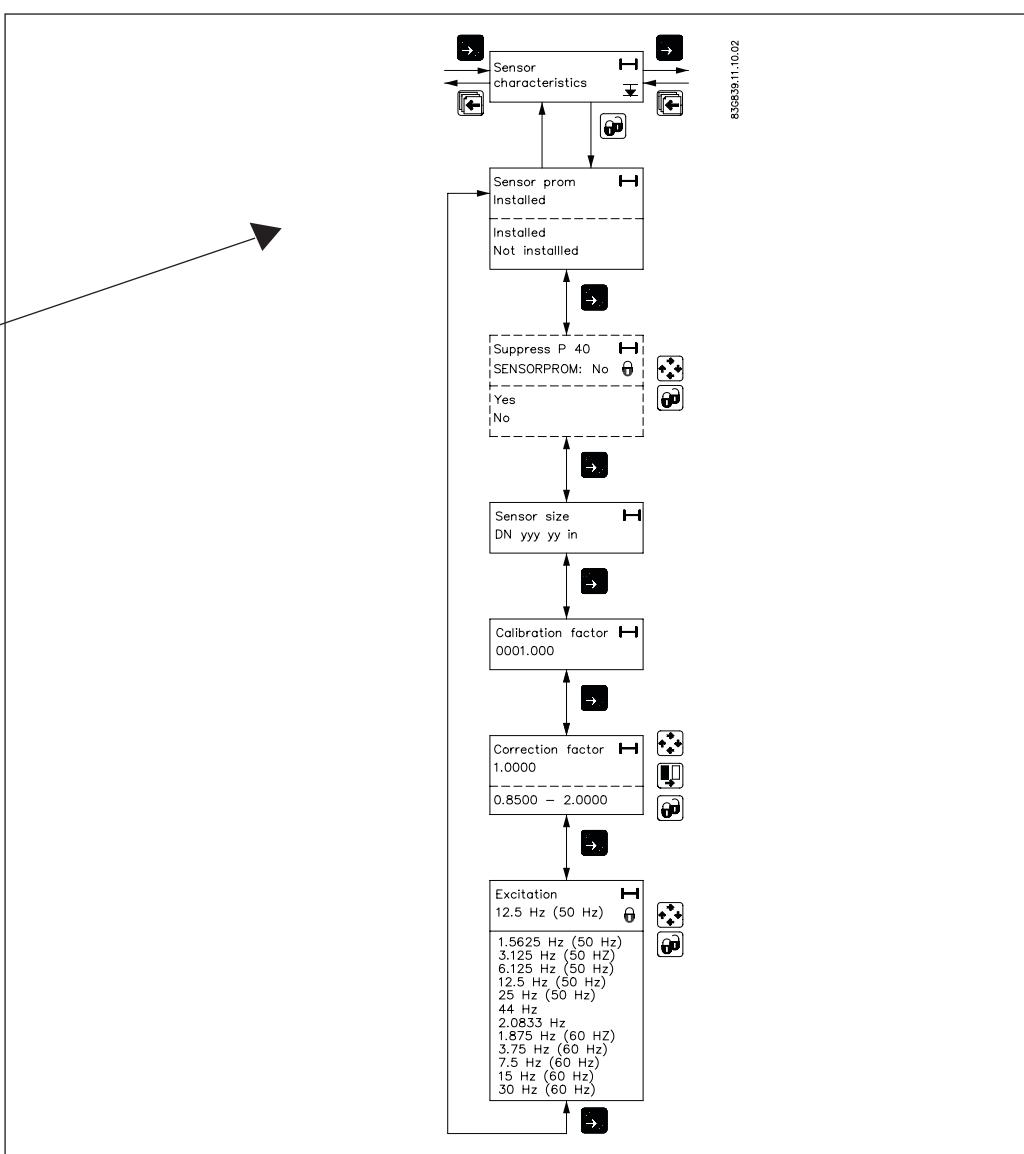

The relay output must always be used to operate the cleaning unit when a cleaning unit has been installed together with the transmitter. The relay output cannot be used for other purposes.

5.4.4 External input

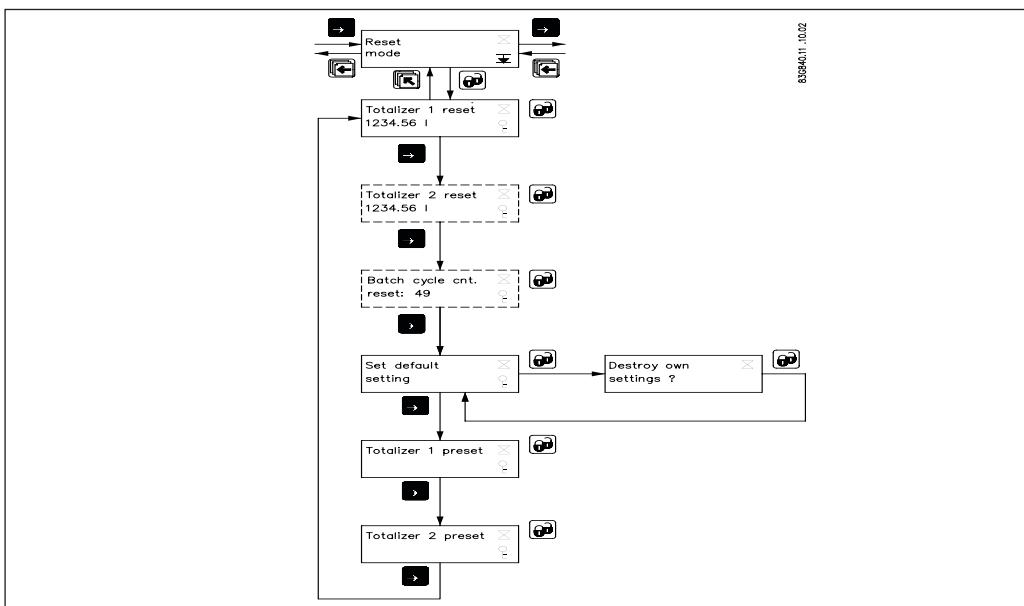

5.4.5 Sensor characteristics

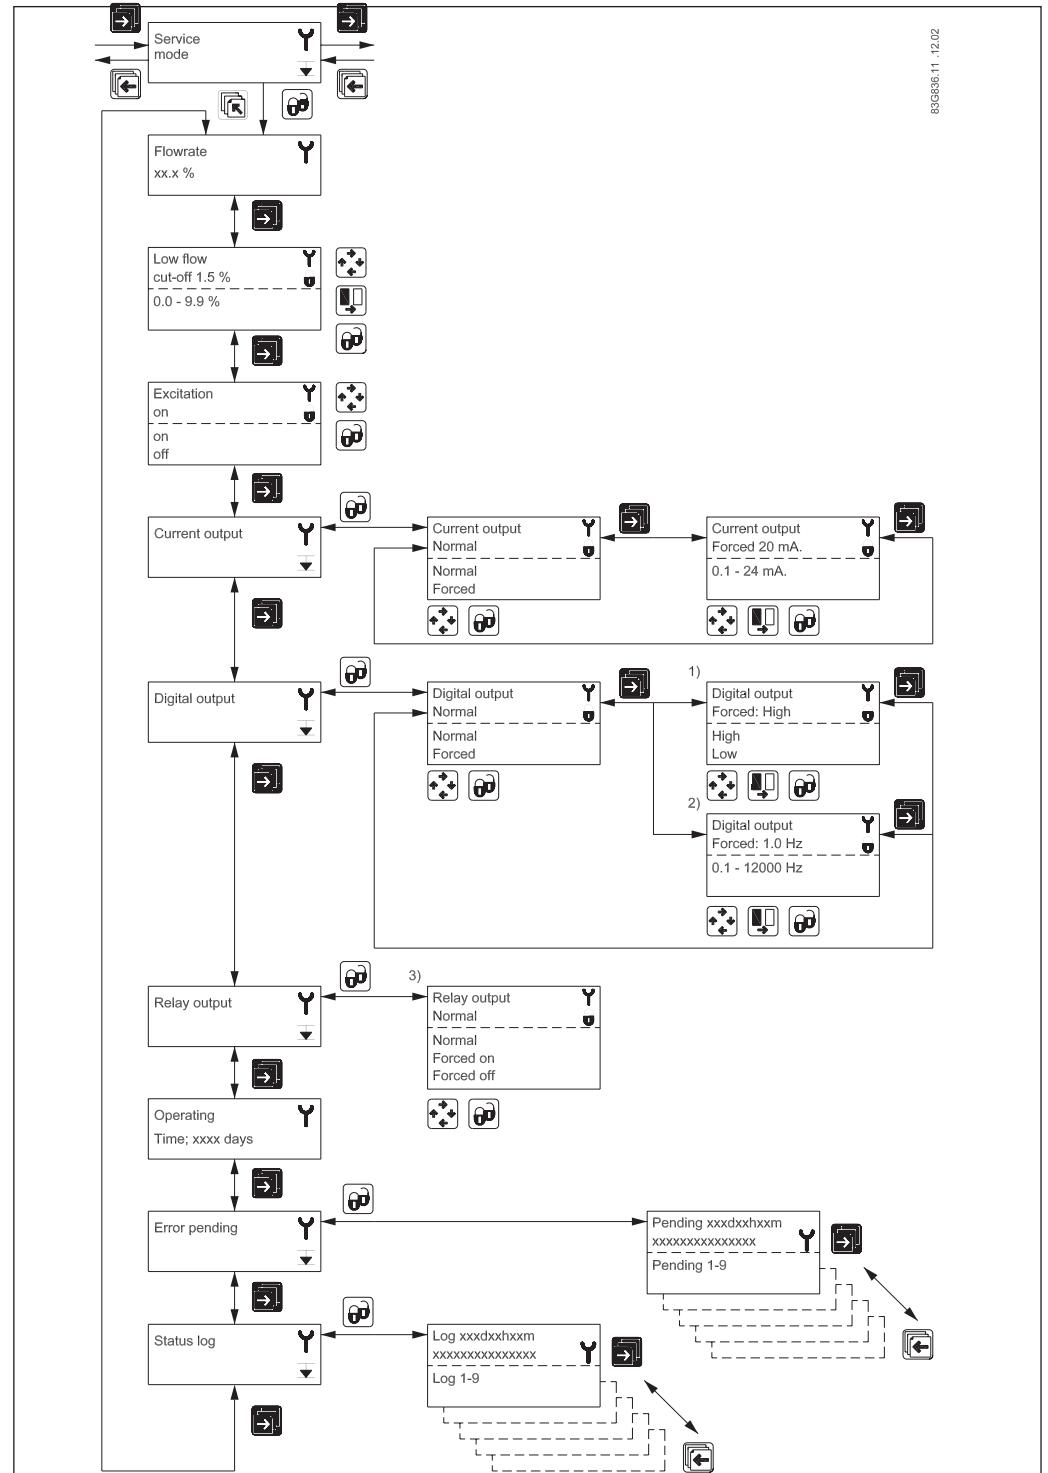

If "SENSORPROM not installed" is shown, refer to chapter 6 (depending on type of mounting configuration).

5.4.6 Reset mode

5.4.7 Service mode

All previous settings are reinitialised when service mode is exited using the top up key.

The error system

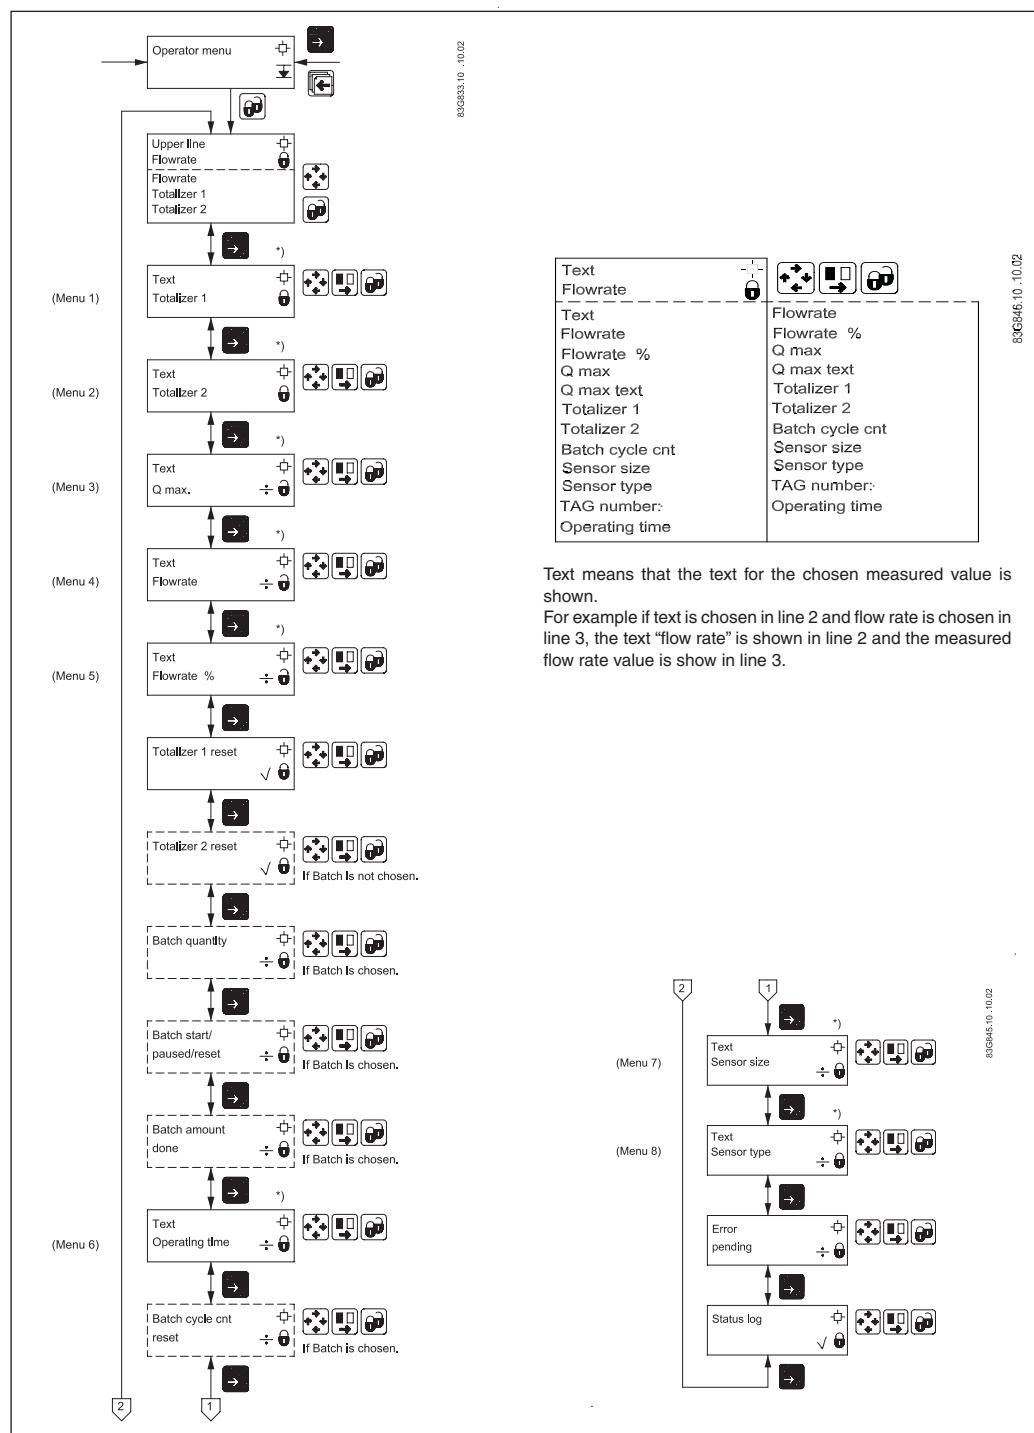

The error system is divided into an error pending list and a status log list. Time is gained as days, minutes and hours since the error has occurred.

The first 9 standing errors are stored in error pending. When an error is removed it is removed from error pending.

The latest 9 errors are stored in the status log. When an error is removed it is still kept in status log. Errors in status log is stored for 180 days.

Error pending and status log are accessible when enabled in the operator menu.

5.4.8 Operator menu setup

The upper line is always active and can never be deselected.

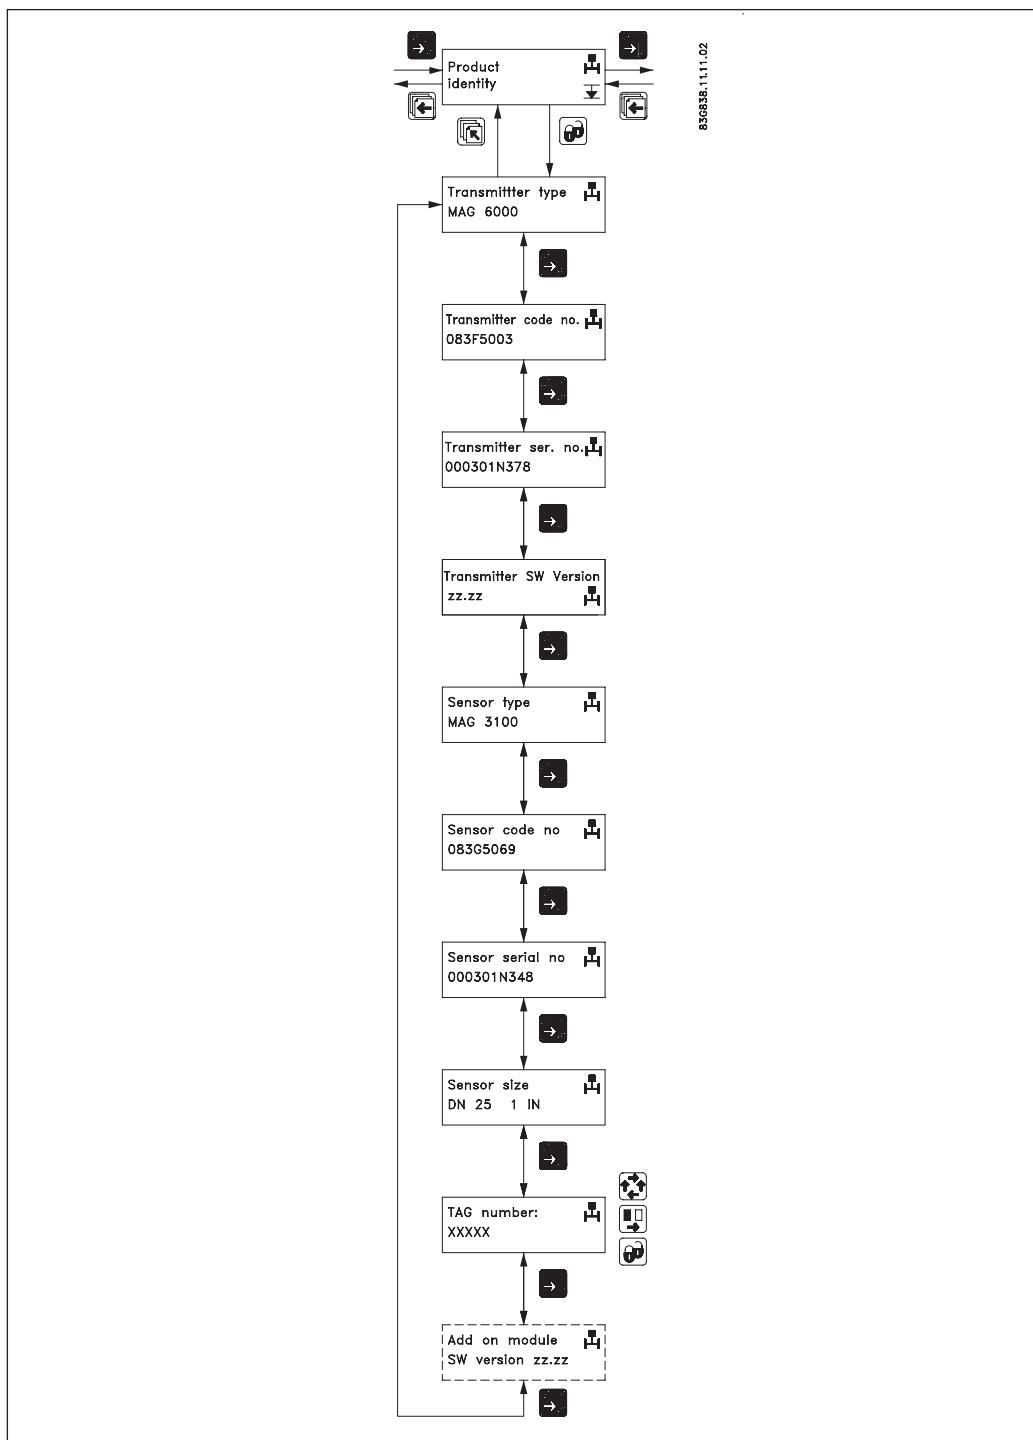

The two lower lines are for individual operator information. Information which the operator can scroll through with the forward key.

- A closed lock key in the operator menu setup, means that the menu is enabled when viewing the operator menu.
- An open lock key symbol, means that the menu is not available in the operator menu.

The middle line can either be used as a heading "Text line" for the lower line, or as a flow reading. A flow reading can be individually selected for each menu.

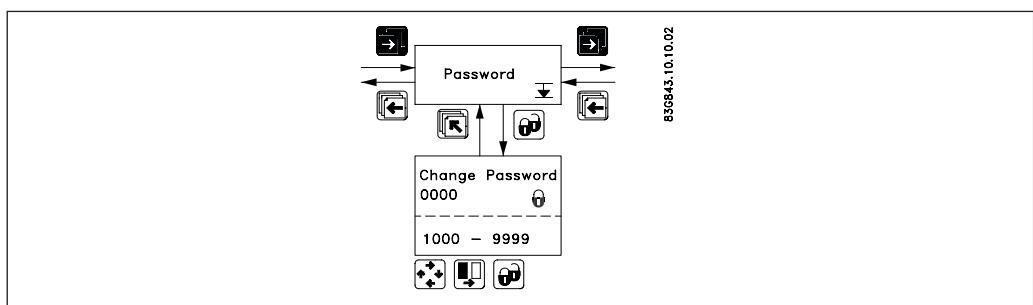

The lower line may be used for an additional flow reading to the reading already available in the upper line.

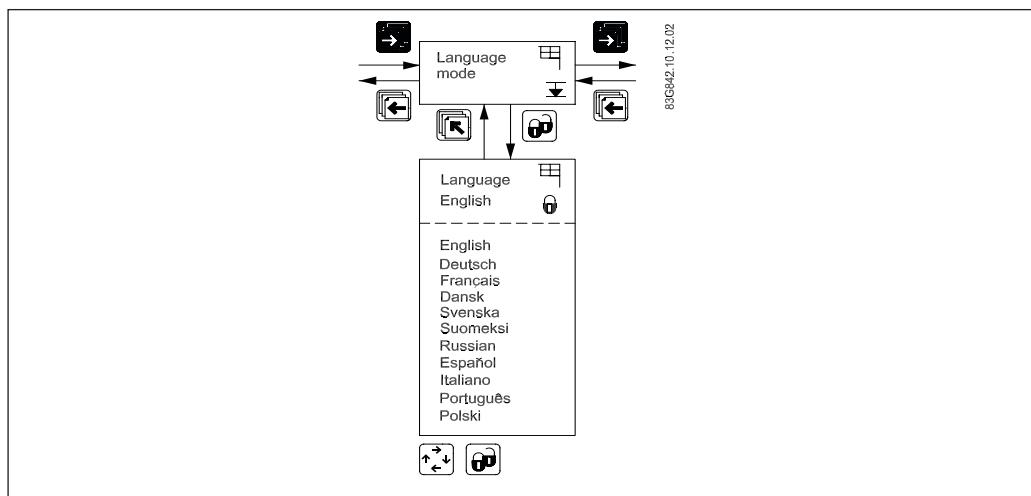

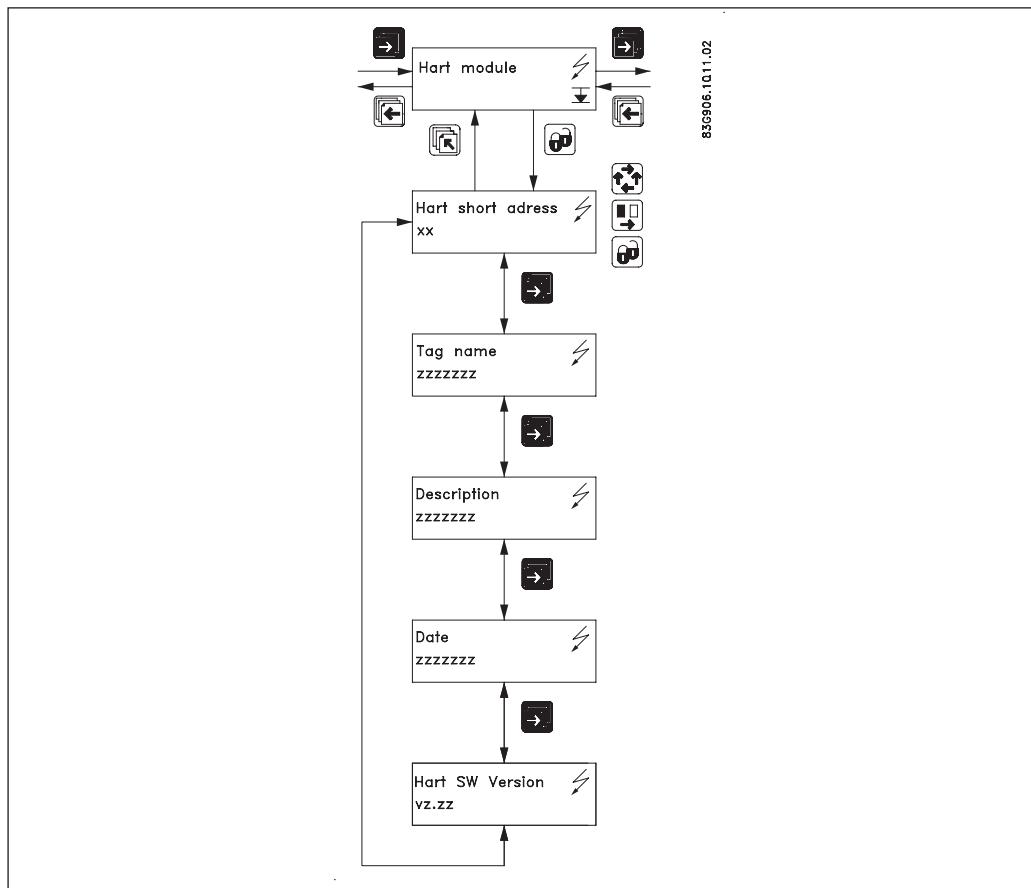

5.4.9 Product identity

Software version of add-on module is only available if the add-on module has been installed.

5.4.10 Change password

**5.4.11
Language mode****5.4.12
HART® communication**

**5.5
Settings available**

The transmitter is delivered with factory settings ready to measure the actual flow.

Parameter	Factory settings	Settings available
Password		
Default value	1000

5.6 Flow rate

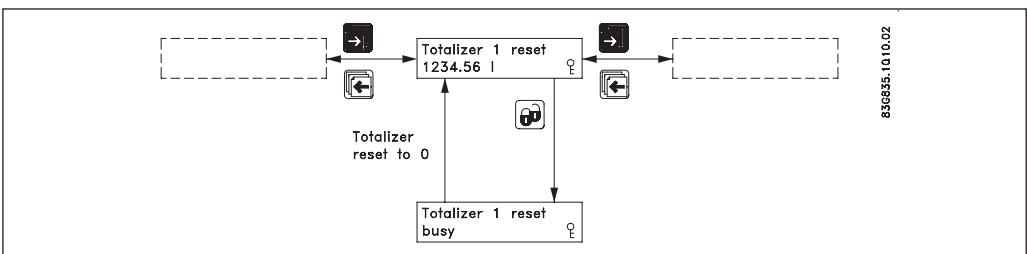

The 1st display line is always active and shows the value enabled in the operator menu setup.

- Flow rate
- Totalizer 1
- Totalizer 2

The 2nd and 3rd display lines are individually set in the operator menu. The page forward key steps through the enabled settings.

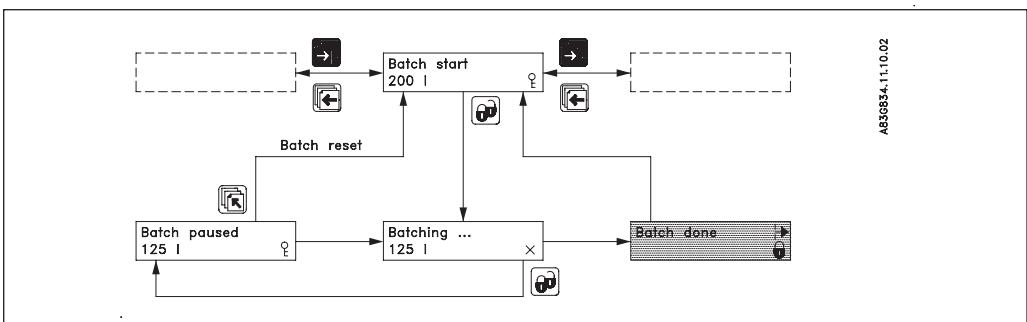

- Flow rate
- Totalizer
- Totalizer reset
- Batch control
- Batch cycle counter
- Batch cycle counter reset
- Pipe size
- Sensor type
- Pending errors
- Status log
- Tag No.

5.6.1 Totalizer

A totalizer is reset by pressing the lock key when the corresponding totalizer reset window is open.

5.6.2 Batch

A batch can be started, paused or stopped from the operator menu, in addition to the externally operated batch control. The batch is controlled using the lock and the top up keys.

The lock key:

- Starts the batch
- Holds the batch (pause) when pressed during batching
- Restarts the batch to continue when pressed during a pause.

The top up key resets a batch completely during a pause.

Batch cycle counter

The accumulated number of performed batches can be viewed when enabled in the operator menu setup.

Batch cycle counter reset

The batch cycle counter is reset by pressing the lock key in the "batch cycle cnt reset" menu.

5.6.3
List of error numbers

Error No.	Error text Remedy text	#Comment	Outputs status	Input status
1	I1 - Power on OK	Power on has happened	Active	Active
2	I2 - Add-on module Applied	A new module has been applied to the system	Active	Active
3	I3 - Add-on module Install	An add-on module is defect or has been removed. This can be an internal add-on module	Active	Active
4	I4 - Param. corrected OK	A less vital parameter in the transmitter has been replaced by its default value	Active	Active
20	W20 - Totalizer 1 Reset manually	During initialisation the check of the saved totalizer value has failed. It is not possible to rely on the saved totalizer value anymore. The totalizer value must be reset manually in order to rely on future readings	Active	Active
20	W20 - Totalizer 2 Reset manually	During initialisation the check of the saved totalizer value has failed. It is not possible to rely on the saved totalizer value anymore. The totalizer value must be reset manually in order to rely on future readings	Active	Active
21	W21 - Pulse overflow Adj. pulse settings	Actual flow is too big compared with pulse width and volume/pulse	Reduced pulse width	Active
22	W22 - Batch timeout Check installation	Duration of batching has exceeded a predefined max. time	Batch output on zero	Active
23	W23 - Batch overrun Check installation	Batch volume has exceeded a predefined maximum overrun volume	Batch output on zero	Active
24	W24 - Batch neg. flow Check flow direction	Negative flow direction during batch	Active	Active
30	W30 - Overflow Adj. Q _{max}	Flow is above Q _{max} settings	Max. 120 %	Active
31	W31 - Empty pipe	Pipe is empty	Zero	Active
40	P40 - SENSORPROM Insert/change	SENSORPROM unit not installed	Active	Active
41	P41 - Parameter range Switch off and on	A parameter is out of range. The parameter could not be replaced by its default value. The error will disappear at the next power-on	Active	Active
42	P42 - Current output Check cables	Current loop is disconnected or the loop resistance is too big	Active	Active
43	P43 - Internal error Switch off and on	Too many errors occurred at the same time Some errors are not detected correctly	Active	Active
44	P44 - CT SENSORPROM	SENSORPROM unit has been used as CT version	Active	Active
60	F60 - CAN comm. error Transmitter/AOM	CAN bus communication error. An add-on module, the display module or the transmitter is defect	Zero	Inactive
61	F61 - SENSORPROM error Replace	It is not possible to rely on the data in SENSOR-PROM unit anymore	Active	Active
62	F62 - SENSORPROM ID Replace	The SENSORPROM unit ID does not comply with the product ID. The SENSORPROM unit is from another type of product MASSFLO, SONOFLO etc.	Zero	Inactive
63	F63 - SENSORPROM Replace	It is not possible to read from the SENSORPROM unit anymore.	Active	Active
70	F70 - Coil current Check cables	Coil excitation has failed	Active	Active
71	F71 - Internal error Replace transmitter	Internal conversion error in ASIC	Active	Active

Note
Some error codes are not available in MAG 6000 I / MAG 6000 I Ex d

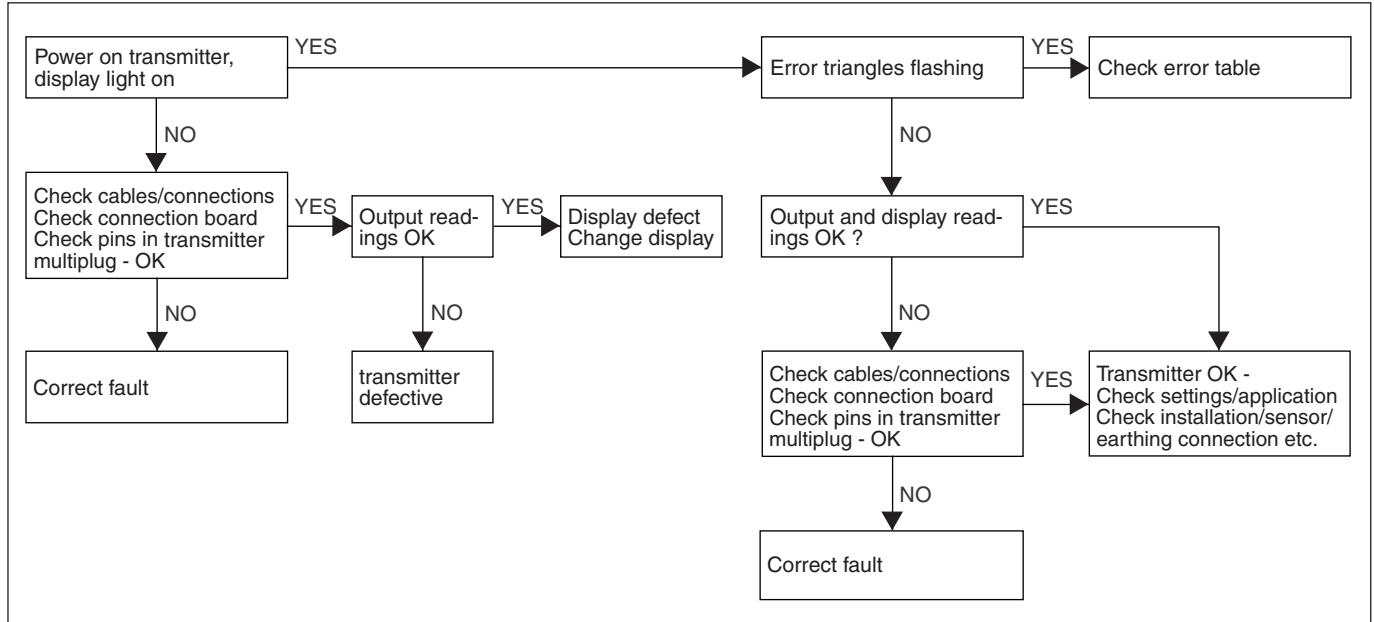

6. Service

Often problems with unstable/wrong measurements occur due to insufficient/wrong earthing or potential equalization. Please check this connection. If OK, the SITRANS F M MAGFLO transmitter can be checked as described in the handbook.

6.1 Transmitter check list

When checking SITRANS F M MAGFLO installations for malfunction the easiest method to check the transmitter is to replace it with another MAG 6000 I electronic insert with a similar power supply.

If no spare electronic insert is available - then check transmitter according to check table.

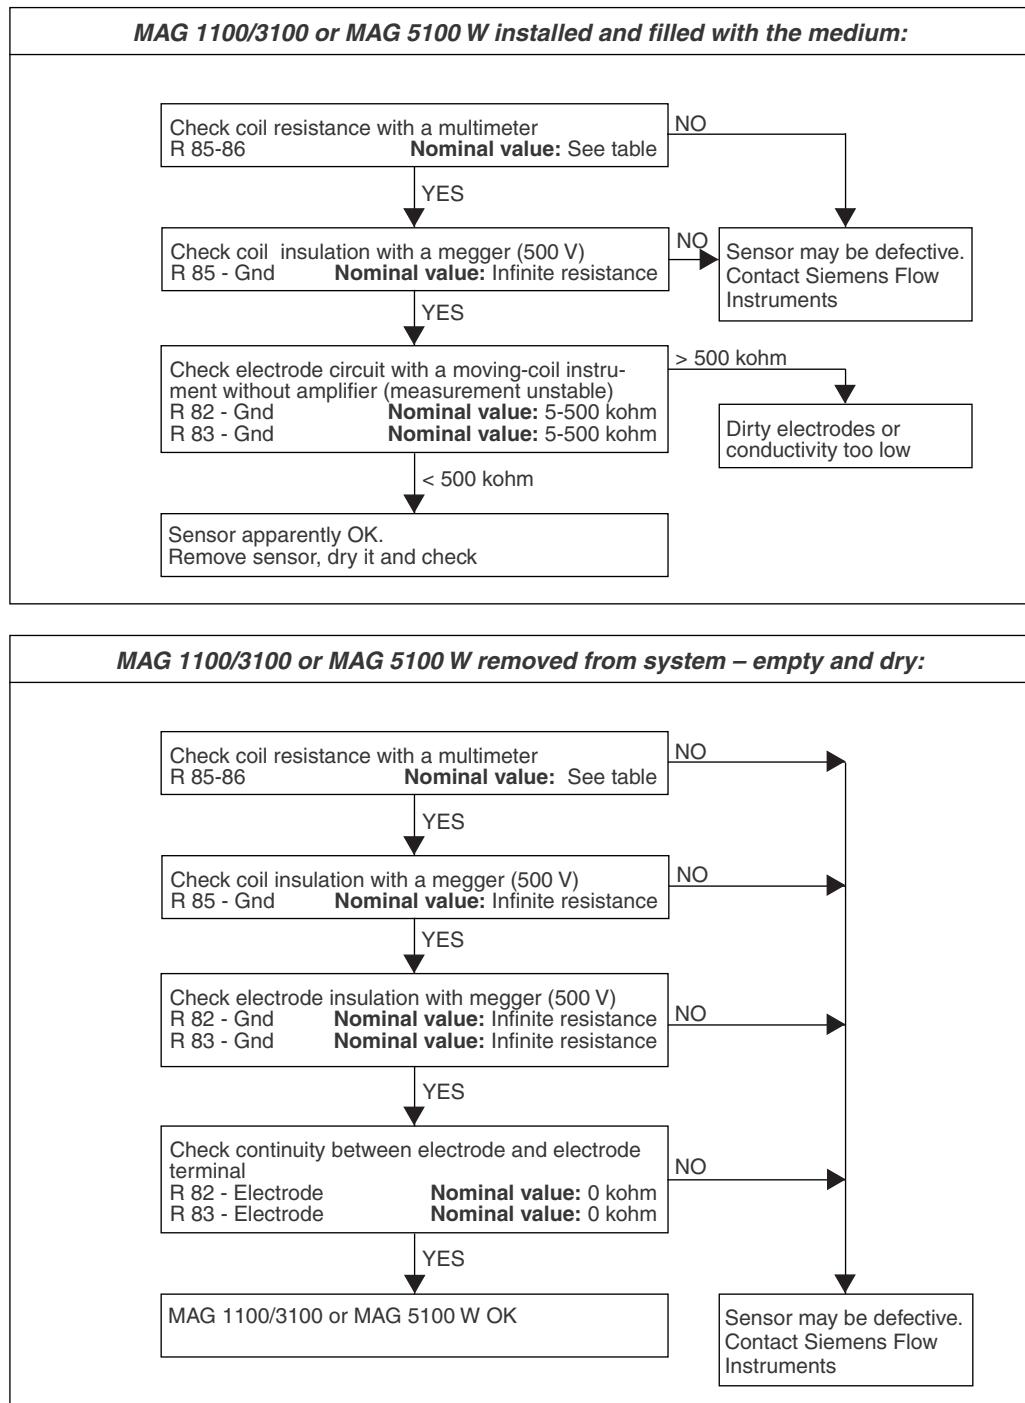

6.2 Trouble shooting MAG transmitter

Symptom	Output signals	Error code	Cause	Remedy
No display reading	Minimum		1. No power supply 2. MAG 6000 I defective	Power supply Check MAG 6000 I for bended pins on the connector Replace MAG 6000 I
No flow signal	Minimum		1. Current output disabled 2. Digital output disabled 3. Reverse flow direction	Turn on current output Turn on digital output Change direction
	F70		Incorrect or no coil current	Check cables/connections
	W31		Measuring pipe empty	Ensure that the measuring pipe is full
	F60		Internal error	Replace MAG 6000 I
	Undefined	P41	Initializing error	Switch off MAG 6000 I, wait 5 s and switch on again
Indicates flow with no flow in pipe	Undefined		Measuring pipe empty Empty pipe cut-off is OFF Electrode connection missing/electrode cable is insufficiently screened	Select empty pipe cut-off Ensure that the measuring pipe is full Ensure that electrode cable is connected and sufficiently screened
Unstable flow signal	Unstable		1. Pulsating flow 2. Conductivity of medium too low 3. Electrical noise potential between medium and sensor 4. Air bubbles in medium 5. High concentration of particles or fibres	Increase time constant Use special electrode cable Ensure sufficient potential equalization Ensure medium does not contain air bubbles Increase time constant
Measuring error	Undefined		Incorrect installation P40 No SENSORPROM unit P44 CT SENSORPROM unit	Check installation Install SENSORPROM unit Replace SENSORPROM unit or reset SENSORPROM unit with MAG CT transmitter
	F61		Deficient SENSORPROM unit	Replace SENSORPROM unit
	F62		Wrong type of SENSORPROM unit	Replace SENSORPROM unit
	F63		Deficient SENSORPROM unit	Replace SENSORPROM unit
	F71		Loss of internal data	Replace MAG 6000 I
	Maximum	W30	Flow exceeds 100% of Q _{max.}	Check Q _{max.} (Basic Settings)
		W21	Pulse overflow • Volume/pulse too small • Pulse width too large	Change volume/pulse Change pulse width
Measuring approx. 50%			Missing one electrode connection	Check cables
Loss of totalizer data	OK	W20	Initializing error	Reset totalizer manually
##### Signs in display	OK		Totalizer roll over	Reset totalizer or increase totalizer unit

6.3 Check list MAG sensor

ATTENTION!

If there is leakage from MAG 1100/3100 or MAG 5100 W and the unit has been used to measure inflammable/explosive liquids, there might be a risk of explosion when checking with a megger.

Disconnect all leads to MAG 1100/3100 or MAG 5100 W

1) On MAG 1100 DN 15 produced as from May 1999 the coil resistance must be 86 ohm, +8/-4 ohm.

2) DN350-1200 for 7ME652 only.

All resistance values are at 20 °C.

The resistance changes proportionally 0.4% / °C.

8.1 EC-declaration of conformity

Please note the following certificates are incomplete for the full version please refer to <http://siemens.com/flow>

EC Declaration of Conformity EG-Konformitätserklärung

No. 083R3101-01

Manufacturer: <i>Hersteller:</i>	Siemens Flow Instruments A/S
Address: <i>Anschrift:</i>	Nordborgvej 81, DK-6430 Nordborg
	Denmark
Product description: <i>Produktbezeichnung</i>	Flow transmitter / Durchfluß meßumformer SITRANS F M
	Type/Typ MAG6000I (and Ex versions), with option modules, used with sensors MAG1100, MAG1100Ex, MAG3100, MAG3100Ex

The product described above in the form as delivered is in conformity with the provisions of the following European Directives:

Das bezeichnete Produkt stimmt in der von uns in Verkehr gebrachten Ausführung mit den Vorschriften folgender Europäischer Richtlinien überein:

2004/108/EC EMC	Directive of the European Parliament and of the Council on the approximation of the laws of the Member States relating to electromagnetic compatibility and repealing Directive 89/336/EEC. <i>Richtlinie des Europäischen Parlaments und des Rates zur Angleichung der Rechtsvorschriften der Mitgliedstaaten über die elektromagnetische Verträglichkeit und zur Aufhebung der Richtlinie 89/336/EWG.</i>
2006/95/EC LVD	Directive of the European Parliament and of the Council on the harmonisation of the laws of Member States relating to electrical equipment designed for use within certain voltage limits. <i>Richtlinie des Europäischen Parlaments und des Rates zur Angleichung der Rechtsvorschriften der Mitgliedstaaten betreffend elektrische Betriebsmittel zur Verwendung innerhalb bestimmter Spannungsgrenzen.</i>
94/9/EC ATEX	Directive of the European Parliament and the Council on the approximation of the laws of the Member States concerning equipment and protective systems intended for use in potentially explosive atmospheres. <i>Richtlinie des Europäischen Parlaments und des Rates zur Angleichung der Rechtsvorschriften der Mitgliedsstaaten für Geräte und Schutzsysteme zur bestimmungsgemäßen Verwendung in explosionsgefährdeten Bereichen.</i>
97/23/EC PED	Directive of the European Parliament and of the Council on the approximation of the laws of the Member States concerning pressure equipment. <i>Richtlinie des Europäischen Parlaments und des Rates zur Angleichung der Rechtsvorschriften der Mitgliedsstaaten über Druckgeräte</i>
2004/22/EC MID	Directive of the European Parliament and the Council on the approximation of the laws of the Member States concerning equipment intended for Legal Metrological Measuring systems. <i>Richtlinie des Europäischen Parlaments und des Rates zur Angleichung der Rechtsvorschriften der Mitgliedsstaaten für Geräte zur bestimmungsgemäßen Verwendung in Legale Metrologische Messsysteme.</i>

Annex A is integral part of this declaration.

Anhang A ist integraler Bestandteil dieser Erklärung.

This declaration certifies the conformity to the specified directives but contains no assurance of properties. The safety documentation accompanying the product shall be considered in detail.

Diese Erklärung becheinigt die Übereinstimmung mit den genannten Richtlinien, ist jedoch keine Beschaffungs- oder Halterkeitsgarantie nach §449 BGB.

Die Sicherheitshinweise der mitgelieferten Produktdokumentation sind zu beachten.

CERTIFICATION

1 **EC TYPE-EXAMINATION CERTIFICATE**

2 Equipment intended for use in Potentially Explosive Atmospheres Directive 94/9/EC

3 Certificate Number: **Sira 07ATEX3181X** Issue: **1**

4 Equipment: **SITRANS F M MAGFLO MAG1100Ex DN2 to DN100**

5 Applicant: **Siemens Flow Instruments A/S**

6 Address: Nordborgvej 81
 Nordborg 6430
 Denmark

7 This equipment and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

8 Sira Certification Service, notified body number 0518 in accordance with Article 9 of Directive 94/9/EC of 23 March 1994, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in the confidential reports listed in Section 14.2.

9 Compliance with the Essential Health and Safety Requirements, with the exception of those listed in the schedule to this certificate, has been assured by compliance with the following documents:

EN 60079-0:2006	EN 60079-7:2007	EN 60079-11:2007
EN 61241-0:2006	EN 61241-1:2004	EN 1127:1998

10 If the sign 'X' is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.

11 This EC type-examination certificate relates only to the design and construction of the specified equipment. If applicable, further requirements of this Directive apply to the manufacture and supply of this equipment.

12 The marking of the equipment shall include the following:

Remote version:

II 2(1) GD

Ex e ia IIB T3-T6

Ex td A21 IP67 T*°C

Ta = -20°C to +60°C (with process temperatures equal to or less than +150°C)

Ta = -20°C to +50°C (with process temperatures equal to or less than +180°C)

(* pipe temperature +18 K)

Compact Configuration (This marking is shown on the transmitter label, the flowmeter is not separately marked):

II 2(1)(2) GD

Ex d [ia] [ib] ia IIB T3-T6

Ex td A21 IP67 T*°C

Ta = -10°C to +60°C (with process temperatures equal to or less than +150°C)

Ta = -10°C to +50°C (with process temperatures equal to or less than +180°C)

(* pipe temperature +18 K, but not less than 85°C)

Note: Siemens label will mark "Ta: (Refer to user instructions)".

Project Number 52A16937

CERTIFICATION

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

**Sira 07ATEX3181X
Issue 1**

13 DESCRIPTION OF EQUIPMENT

Each of the MAG1100Ex Flowmeters comprises two concentric cylindrical tubes with welded end caps. The outer tube is stainless steel and the inner is ceramic. The end caps are machined such as to allow mounting into process pipe work, the process fluid passing through the inner ceramic tube. 'O' ring seals are fitted between the tubes to prevent the ingress of process fluid. The enclosure contains energising coils with sensing electrodes.

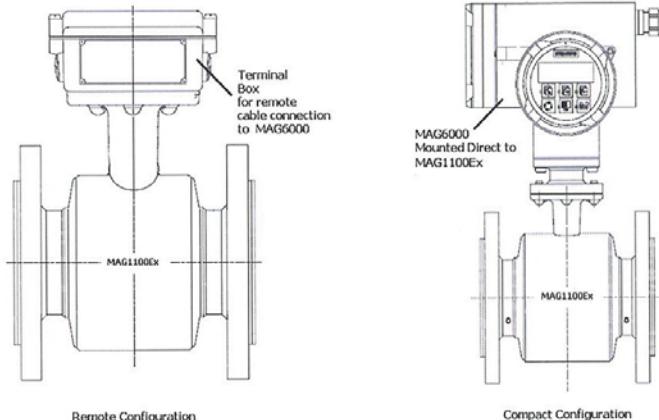

Cables enter the enclosure via an extension on the body and through a silicone compression seal. The seal is compressed by means of a central threaded element and is retained by a circlip arrangement. A terminal box is mounted on the extension to enable termination of the intrinsically safe and increased safety 'e' cabling. The whole Flowmeter is considered Ex 'd' up to the terminal box (up to internal flameproof 'silicone compression seal') at which point the field and factory wiring is considered protected by Ex 'ia' and Ex 'e' protection principles.

Design Variations/Options

The SITRANS F M MAGFLO MAG1100Ex Flowmeters are available in size ranges (pipe bore):

- DN2 to DN6 (Zirconium Ceramic)
- DN6 to DN100 (Alumina Ceramic)

Additionally the MAG1100Ex is either configured as a Remote or Compact type sensor. The Remote version has the MAG1100Ex Flowsensor installed independently with cable connections made via the terminal box to the MAG6000 transmitter located in a separate location. The Compact type configuration has the MAG6000 (Sira 05ATEX2072X) mounted directly to the MAG1100Ex Sensor in place of the terminal box. The diagram below shows the two configuration types.

Note: The diagram above is representative of a MAG1100 Flowsensor and is only presented to depict the configuration of either the terminal box or MAG6000Ex to the Flowsensor.

This certificate and its schedules may only be reproduced in its entirety and without change.

Form 9400 Issue1

Page 2 of 4

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

Sira 07ATEX3181X

Issue 1

The parameters for the SITRANS F M MAGFLO MAG1100Ex Flowmeter are as follows:

Remote version:

Terminals 0, 81, 82, 83, 84 (Ex ia)	Ui = 30 V Ii = 50 mA	Pi = 0.5 W Ci = 50 nF Li = 2 µH
-------------------------------------	-------------------------	---------------------------------------

Terminals 85, 86 (Ex e)	Ui = 30/70 V _{pk} Ii = 130 mA
-------------------------	---

Compact version:

Refer to certificate number Sira 05ATEX2072X.

Variation 1 - This variation introduced the following changes:

- i. The ambient temperature specification relative to process temperatures was reviewed; this is the result of the upper process temperature limit being raised from 150°C up to a maximum of 180°C. The special condition for safe use appertaining to the temperature limits, temperature classes and maximum surface temperatures for dust are also modified and the marking has been amended so that the user/installer is advised to refer to the instructions for this information.

14 DESCRIPTIVE DOCUMENTS

14.1 Drawings

Refer to Certificate Annexe.

14.2 Associated Sira Reports and Certificate History

Issue	Date	Report no.	Comment
0	1 October 2007	R52A16937A	The release of the prime certificate.
1	5 February 2008	R52A17771A	The introduction of Variation 1.

15 SPECIAL CONDITIONS FOR SAFE USE (denoted by X after the certificate number)

15.1

The surface temperature of the equipment depends on the temperature of the process fluid.

Maximum process fluid temperature	Temperature class (for gases)
67°C	T6 (85°C)
82°C	T5 (100°C)
117°C	T4 (135°C)
180°C ¹	T3 (200°C)

¹ The maximum ambient temperature allowed at this process temperature is +50°C. Process temperatures up to and including 150°C may have a maximum ambient temperature of +60°C.

For dust protection, the surface temperature is equal to the process fluid temperature +18 K when configured in the Remote version and process fluid temperature +18 K but not less than +85°C in the compact configuration.

15.2

In operation, the output is earthed through the conductive medium being measured and therefore potential equalisation is necessary throughout the hazardous area. The apparatus housing shall be connected to the potential equalising conductor in the hazardous area.

This certificate and its schedules may only be reproduced in its entirety and without change.

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

**Sira 07ATEX3181X
Issue 1**

- 15.3 The external connections to the Ex 'e' Terminals of the Remote version shall comply with the following:
- 15.3.1 The wire conductors shall have a cross-sectional area between 0.5 mm² and 4 mm².
 - 15.3.2 No more than one single or multiple strand wire conductor shall normally be connected to each of the terminals. If multiple conductors are required, these shall be joined in a suitable manner, e.g. two conductors into a single insulated crimped boot lace ferrule.
 - 15.3.3 The insulation on the wire conductors shall extend to within 1mm of the metal of the terminal throat.
 - 15.3.4 The terminal screws shall be tightened down with a torque between 0.5 Nm and 0.7 Nm.
 - 15.3.5 The terminals shall never be exposed to temperatures outside of the range -50°C to +130°C; in addition, they shall only be installed and wired with cable in an ambient temperature of -10°C to +80°C. Furthermore, in the event of there being a process temperatures of +180°C in conjunction with an upper ambient temperature of +50°C the terminal strips should not be installed or wired with cable.
- 15.4 The terminal box shall not be opened when an explosive gas or dust atmosphere may be present.
- 16 **ESSENTIAL HEALTH AND SAFETY REQUIREMENTS OF ANNEX II (EHSRs)**
- The relevant EHSRs that are not addressed by the standards listed in this certificate have been identified and individually assessed in the reports listed in Section 14.2.
- 17 **CONDITIONS OF CERTIFICATION**
- 17.1 The use of this certificate is subject to the Regulations Applicable to Holders of Sira Certificates.
- 17.2 Holders of EC type-examination certificates are required to comply with the production control requirements defined in Article 8 of directive 94/9/EC.
- 17.3 Each enclosure, including cast pedestal when fitted, shall be subjected to a routine pressure test of 8.85 bar for at least 10 s as required by clause 16.1 of EN 60079-1:2004. There shall be no damage or permanent deformation as a result of the tests.
- 17.4 When used in 'Compact' configuration, the conditions imposed by certificate Sira 05ATEX2072X apply to the assembly.
- 17.5 Dielectric strength test required as per Clause 7.1 of EN 60079-7:2007
- 17.6 The Remote Version of the equipment, as supplied, shall only be connected to another item of certified Ex ia associated apparatus or Ex e equipment (e.g. an electro-magnetic transmitter).
- 17.7 This certificate relies on the following previously certified products. When used as part of the SITRANS F M MAGFLO MAG3100 Ex Flowsensor, the key attributes are listed in the table below and shall still be maintained by their original certificate.

Product	Certificate number	Key attributes
Weidmuller BK2/E terminal	Sira 01ATEX3247U	EEx e II

This certificate and its schedules may only be reproduced in its entirety and without change.

7 This equipment and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

8 Sira Certification Service, notified body number 0518 in accordance with Article 9 of Directive 94/9/EC of 23 March 1994, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in the confidential reports listed in Section 14.2.

9 Compliance with the Essential Health and Safety Requirements, with the exception of those listed in the schedule to this certificate, has been assured by compliance with the following documents:

EN 50014:1997 (A1 and A2) EN 50019:2000 EN 50020:2002 EN 50281-1-1:1998

10 If the sign 'X' is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.

11 This EC type-examination certificate relates only to the design and construction of the specified equipment. If applicable, further requirements of this Directive apply to the manufacture and supply of this equipment.

12 The marking of the equipment shall include the following:

II 2 G D
EEx e ia IIC T3 to T6

'Compact' arrangement marked 'MAG6000 INDUSTRY'

II 2(1)(2) GD T85°C
EEx de [ia] ia [ib] IIC T3-T6 (Ta -10°C to +60°C)

Project Number 52A17771
C. Index 13

This certificate and its schedules may only be reproduced in its entirety and without change.

CERTIFICATION

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

Sira 03ATEX3339X
Issue 7

13 DESCRIPTION OF EQUIPMENT

The SITRANS F M MAGFLO MAG3100 Ex flowsensor comprises a pair of increased safety windings and intrinsically safe magnetic sensing circuit electrodes that are mounted on a pipe body. The size range covered is DN350 to DN2000. The windings are rated at 30 V d.c. and the sensing circuit is rated at 9.3 V, 40 mA.

The pipe body is fitted with clips, which secure the increased safety windings, and pipe flanges for installation to the process pipework. Two diametrically opposed tubes are welded to the sides of the pipe and these contain intrinsically safe electrodes that pass through the wall of the pipe into the bore. An outer casing manufactured from steel encloses the windings and wiring, but the diametrically opposed tubes pass through this outer casing and the open ends are sealed by tamperproof plugs. The interior of the tubes is filled with gel encapsulant.

The increased safety windings are manufactured from self-bonding insulated copper winding wire and are connected in series. The connection leads from the windings and the electrodes are taken back to a junction box which is mounted on a tube welded to the outer casing. The leads pass through the tube and enter the rear of the enclosure where they are terminated on terminal blocks. The junction box meets IP67 ingress protection.

The sensing circuit leads are screened, with a single core, with the screens terminated on an earth terminal near the intrinsically safe terminal block.

Additional earthing electrodes fitted through the wall of the pipe may be provided. The earthing electrodes are fitted into holes in the sensor tube and are secured by a continuous weld. Alternatively the electrodes may be screwed in and Loctite applied to the threads to seal them.

Variation 1 - This variation introduced the following changes:

- The Special Condition For Safe Use, clause 15.3 in the original certificate, was deleted as the equipment cannot be used with a flow of metallic powder.
- The replacement of drawing 083A0274 with drawing 083A0284, this reflects changes to the rating of the intrinsically safe sensing circuit as follows:

$$U_i = 30 \text{ V} \quad L_i = 2 \mu\text{H}$$

Variation 2 - This variation introduced the following changes:

- The correction of a ferrule specification drawing.

Variation 3 - This variation introduced the following changes:

- The introduction of a strengthening sleeve welded over the existing pedestal.

Variation 4 - This variation introduced the following changes:

- The removal of the terminal box and the fitting of interface components, this allows the Sitrans F M Magflo MAG6000 industry transmitter, Certificate Number Sira 05ATEX2072X, to be mounted directly onto the flowmeter, this combined transmitter/sensor arrangement being designated the 'Compact' arrangement and being marked 'MAG6000 INDUSTRY'; see clause 12 for applicable marking.
- The introduction of an alternative method of joining the coil wire to the leads.
- The use of an alternative terminal box base plate and intrinsically safe separation shield was permitted.
- The use of alternative cable glands into the terminal box was permitted.
- The use of an alternative electrode pin through the existing glass ferrule was permitted.

This certificate and its schedules may only be reproduced in its entirety and without change.

CERTIFICATION

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

Sira 03ATEX3339X
Issue 7

Variation 5 - This variation introduced the following changes:

- i. The fabricated pedestal was substituted by a cast steel version.

Variation 6 - This variation introduced the following changes:

- i. The terminal box arrangement used on the MAG3100 (DN15 – DN300) under Sira certificate 07ATEX1182X may be used on this version of the MAG3100, sizes DN350 to DN2000; new drawing A5E01211109A refers.
- ii. The label material was changed from "adhesive backed polyester, temp range -20 to +140 Deg C" to "MP50 Metallised Polyester, Permanent Adhesive Backed" (to bring into line with other label materials), in addition, tolerance +/- 2 mm was added to dimensions.
- iii. A reference to Sira 07ATEX1182X was included on Drawing 083Z3042.

Variation 7 - This variation introduced the following changes:

- i. The modification of the mounting arrangement for the divider separating the Ex 'e' and the Ex 'ia' terminals.

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

**Sira 03ATEX3339X
Issue 7**

15 SPECIAL CONDITIONS FOR SAFE USE (denoted by X after the certificate number)

15.1 The surface temperature of the equipment depends on the temperature of the process fluid:

Process fluid temperature	Temperature class (for gases)
<75°C	T6
<90°C	T5
<125°C	T4
<190°C	T3

For dust protection, the surface temperature is equal to the process fluid temperature plus 5°C.

15.2 In operation, the output is earthed through the conductive medium being measured and therefore potential equalisation is necessary throughout the hazardous area. The apparatus housing shall be connected to the potential equalising conductor in the hazardous area.

16 ESSENTIAL HEALTH AND SAFETY REQUIREMENTS OF ANNEX II (EHSRs)

The relevant EHSRs that are not addressed by the standards listed in this certificate have been identified and individually assessed in the reports listed in Section 14.2.

17 CONDITIONS OF CERTIFICATION

17.1 The use of this certificate is subject to the Regulations Applicable to Holders of Sira Certificates.

17.2 Holders of EC type-examination certificates are required to comply with the production control requirements defined in Article 8 of directive 94/9/EC.

17.3 This certificate relies on the following previously certified products. When used as part of the SITRANS F M MAGFLO MAG3100 Ex flowsensor, the key attributes listed in the table below shall still be maintained by their original certificate.

Product	Certificate number	Key attributes
Weidmuller BK2/E terminal	Sira 01ATEX3247U	EEx e II
Hawke type PET5 Pillar earth terminal	BAS 01ATEX2247U	EEx e II

This certificate and its schedules may only be reproduced in its entirety and without change.

7 This equipment and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

8 Sira Certification Service, notified body number 0518 in accordance with Article 9 of Directive 94/9/EC of 23 March 1994, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in confidential report number R52A14179A.

9 Compliance with the Essential Health and Safety Requirements, with the exception of those listed in the schedule to this certificate, has been assured by compliance with the following documents:

EN 50014:1997 + A1 and A2

EN 50018:2000 + A1

EN 50019:2000

EN 50020:2002

EN 50281-1-1:1998

10 If the sign 'X' is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.

11 This EC type-examination certificate relates only to the design and construction of the specified equipment. If applicable, further requirements of this Directive apply to the manufacture and supply of this equipment.

12 The marking of the equipment shall include the following:

Compact Version:

II 2(1)(2) GD T85°C
EEx d [ia] [ib] IIC T6 (Ta -10°C to +60°C)

Remote Version:

II 2(1)(2) GD T85°C

Re-issued 17 May 2007 to re-assess the certificate contents..

13

DESCRIPTION OF EQUIPMENT

The equipment is a transmitter that is intended to be used with an associated electro-magnetic flowmeter (the certification of which is not covered by this certificate). There are two versions of the transmitter, a compact version, intended to be directly attached to the flowmeter, and a remote version, intended to be located separate from a flowmeter and connected to it via cabling.

The transmitter consists of an enclosure comprising a main flameproof (EEx d) chamber and a flameproof (EEx d) terminal chamber. In addition the remote version of the transmitter has a separate second intrinsically safe (EEx ib)/ increased safety (EEx e) terminal chamber containing terminal blocks intended for the connection of the cabling to the flowmeter.

The main flameproof chamber contains an assembly of two printed circuit boards mounted on top of each other, an optional 'HART' interface module, a Profibus printed circuit board assembly, and a display/capacitive touch screen sensor switch module.

The flameproof terminal chamber contains a terminal printed circuit board assembly fitted with terminals intended for external mains supply and data interface connections. External wiring connections are made via separate flameproof cable glands mounted in the wall of the enclosure, one for the mains supply cable and the other for the data interface cable.

The intrinsically safe/increased safety chamber of the remote version of the transmitter contains a terminal assembly comprising a certified increased safety (EEx e) terminal block and a separate 'plug in' terminal block intended for the intrinsic safety connections, both these terminal blocks being for external wiring connections to the separate flowmeter.

The compact version of the transmitter has 'flying leads' for direct connection to the flowmeter.

CERTIFICATION

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

Sira 05ATEX2072X

- 15 **SPECIAL CONDITIONS FOR SAFE USE** (denoted by X after the certificate number)
- 15.1 The equipment can be supplied with its Current Output (Terminals 31 and 32) configured in either an Active Mode (I-OUT ACTIVE) or a Passive Mode (I-OUT PASSIVE), the configured mode of any particular transmitter being marked on a label fitted to the inside of the mains supply/data interface terminal chamber lid. The user shall refer to this label to determine the configured mode of a particular transmitter to determine which one of the two sets of parameters specified for the Current Output is applicable. The mode of a transmitter is not user configurable.
- 15.2 The external connections to Terminals 85 and 86 shall comply with the following:
- 15.2.1 The wire conductors shall have a cross-sectional area between 0.5mm² and 2.5mm².
 - 15.2.2 No more than one single or multiple strand wire conductor shall normally be connected to each of the terminals. If multiple conductors are required, these shall be joined in a suitable manner, e.g. two conductors into a single insulated crimped boot lace ferrule.
 - 15.2.3 The insulation on the wire conductors shall extend to within 1mm of the metal of the terminal throat.
 - 15.2.4 The terminal screws shall be tightened down with a torque between 0.4 Nm and 0.45Nm.
- 15.3 The equipment shall not be opened when an explosive gas or dust atmosphere may be present.
- 16 **ESSENTIAL HEALTH AND SAFETY REQUIREMENTS OF ANNEX II (EHSRs)**
- The relevant EHSRs that are not addressed by the standards listed in this certificate have been identified and individually assessed in report number R52A14179A.
- 17 **CONDITIONS OF CERTIFICATION**
- 17.1 The use of this certificate is subject to the Regulations Applicable to Holders of Sira Certificates.
- 17.2 Holders of EC type-examination certificates are required to comply with the production control requirements defined in Article 8 of directive 94/9/EC.
- 17.3 The manufacturer shall conduct a routine hydrostatic overpressure test at 28.2 bar on each enclosure manufactured.
- 17.4 The manufacturer shall use an elastomeric sealing ring for the internal cable entry device that has a minimum uncompressed axial height of 5mm.
- 17.5 The compression screw for the internal cable entry device with elastomeric sealing shall be tightened to a torque of 3 Nm.
- 17.6 Transformer T200 in this equipment shall be subjected to a routine test voltage of 2500V r.m.s. between primary and secondary windings and between feedback and secondary windings. There shall be no breakdown of insulation as required by clause 11.2 of EN 50020:2002.
- 17.7 The equipment shall be subjected to a routine test voltage of 500V r.m.s. between Terminals 0, 31, 32, 44, 45, 46, 56, 57, 77, 78, 81, 82, 83, 84, 95 and 96 and the enclosure/earth in accordance with clause

SCHEDULE

EC TYPE-EXAMINATION CERTIFICATE

Sira 05ATEX2072X

- 17.8 The equipment shall be subjected to a routine test voltage of 1500V r.m.s. between Terminals 0, 31, 32, 44, 45, 46, 56, 57, 77, 78, 81, 82, 83, 84, 95 and 96 and Terminals L1 and N in accordance with clause 10.6 of EN 50020:2002. There shall be no breakdown of insulation as required by clause 6.4.12 of EN 50020:2002.
- 17.9 The Compact Version of the equipment, as supplied, shall only be connected and mounted to another item of certified Ex d or Ex e equipment (e.g. an electro-magnetic flowmeter). This 'other equipment' shall be certified for such an arrangement i.e. the associated certificate shall cover the mounting and connection of the SITRANS F M MAGFLO6000 INDUSTRY. Supply of the Compact Version of the equipment in isolation is not permitted.
- 17.10 The products covered by this certificate incorporate previously certified devices, it is therefore the responsibility of the manufacturer to continually monitor the status of the certification associated with these devices, and the manufacturer shall inform Sira of any modifications of the devices that may impinge upon the explosion safety design of the products.
