

# ASCO<sup>®</sup> RedHat<sup>™</sup>

NEXT GENERATION

Higher DC pressure rating

80% reduction in power consumption

Built in surge suppression

3-year coil warranty

Class I, Division 2 coils available

# ASCO<sup>®</sup> RedHat<sup>®</sup>

## NEXT GENERATION

RedHat Next Generation is the future of solenoid valve technology, designed and manufactured to provide new capabilities. The Next Generation of solenoid valves provides lower operating cost, and represents an advancement in the performance, reliability, and ruggedness that you have come to expect from ASCO.

RedHat Next Generation valves use electronics technology to manage power, providing a new standard of operation. The solenoid incorporates a power management circuit providing lower power consumption, enhanced pressure and flow ratings, and electrical surge suppression to both the solenoid and electronic controls.

The new solenoid draws only 2 watts of power. A conventional solenoid with the same performance can draw as high as 17 watts of power. The savings in power usage over the installed life of the valve will lower the total cost of ownership up to 14%.

The new technology accepts both AC and DC voltages without sacrificing flow or pressure specifications. DC performance has been increased by 150% to 500% from today's industry standards, making the valves' DC characteristics equivalent to AC pressure and flow values. This simplifies your control by eliminating the need for AC output cards, reduces wiring costs, and provides safer working environments for users operating on DC.

RedHat Next Generation coils are offered in three voltage ranges covering most electrical requirements – 100-240/AC or DC, 24-99/AC or DC, or 12-24/DC. Each coil has built-in electrical surge suppression that protects the coil from external voltage spikes and eliminates inductive voltage spikes associated with conventional solenoids. An optional solenoid is available for use in Class I, Division 2 hazardous locations.

ASCO RedHat Next Generation addresses many other operating characteristics that will further improve the life of your solenoid valves. These include a much lower temperature rise, and an increase in valve ambient temperature rating to 140°F/60°C. Because of our confidence in the rugged design of the RedHat Next Generation solenoids, ASCO is pleased to extend a 3-year warranty on the coils.

Visit us online at [www.ascovalve.com](http://www.ascovalve.com) to see our comprehensive product portfolio.

- 1/2 inch female conduit
- Polyester coated aluminum conduit hub
- Enclosure Types 1 through 4X
- Now standard with 24 inch leads
- Stainless steel nameplate
- Steel clip with epoxy powder coated paint
- LCP overmolded coil
- Optional Class 1, Division 2 coil available for hazardous locations

**As you use this catalog to select RedHat Next Generation products, note these key operating features:**

- Increase in DC pressure ratings to AC levels on all products (up to a 500% improvement)
- Lower power operation
- Voltage ranging
- Built in surge suppression
- Elimination of AC hum
- Increase in AC and DC operating temperatures
- Low solenoid temperature rise
- Longer coil life due to lower operating temperatures and electrical surge suppression
- Solenoid approvals to UL, CSA, and CE standards

**How to order**

Find the valve that you are looking for in the provided specifications tables. The tables contain the following information designed to help you in making your selection:

①

Pipe Size (ins.)	Orifice Dia. (ins.)	Cv Flow	Operating Pressure Differential (psi)			Max Fluid Temp. °F	Brass	Const. Ref.	Agency			Const. Ref.	Wattage AC/DC	Approx. Shipping Weight (lbs.)	
			Min.	Max. AC/DC					UL	Stainless Steel	UL				
				Air-Inert Gas	Water										Light Oil
1/2	5/8	4	0	150	150	-	180	8210P094	4	C	-	-	-	2	3.2

① When ordering a valve product, specify the ASCO base catalog number (Ex. 8210P094). This number will always be 8 digits long.

Choose one of the three operating voltage ranges (100-240V/50-60Hz/DC, 24-99V/50-60Hz/DC or 12-24/DC) and add it to the base catalog number (Ex. 8210P094 24-99V/50-60Hz/DC).

If you want to enhance the product with one or more of the options allowed in the Optional Features Chart for that catalog number, please add the appropriate prefix or suffix (as shown):

②    ③    ③    ④

Pipe Size (ins.)	Orifice Dia. (ins.)	Solenoid Options	Base Catalog Number	Resilient Materials										Other		Standard Rebuild Kit	
		Class I, Division 2 Coil	Brass	Stainless Steel	NBR	FKM	EPDM	Neoprene	Oxygen Service	PTFE	Urethane	Vacuum	Manual Operator	Mounting Bracket	Brass AC/DC	Stainless Steel AC/DC	
1/2	5/8	EE	8210P094	-	●	V	E	J	N	-	-	VH	MO	MB	322670	-	

② Optional Class I, Division 2 solenoid (Ex. EE8210P094 24-99V/50-60Hz/DC)

③ If an FKM elastomer and manual operator are required, add VMO to the back of the base catalog number. (Ex. 8210P094VMO 24-99V/50-60Hz/DC)

④ When ordering a rebuild kit for a valve, supply the rebuild kit number as shown in the table. (Ex. 322670) When ordering a rebuild kit for a valve with a suffix, add the suffix to the appropriate standard rebuild kit. (Ex. The rebuild kit for the above valve with FKM is 322670-V)

All constructions are available with prefix EE for Class I, Division 2 requirements.

**When ordering a replacement coil, select from the following:**

Voltage Range	Valve Prefix	Replacement Coil Part Number
100-240V/50-60Hz/DC	-	250404-601-*
24-99V/50-60Hz/DC	-	250404-602-*
12-24/DC	-	250404-603-*
100-240V/50-60Hz/DC	EE	250504-601-*
24-99V/50-60Hz/DC	EE	250504-602-*
12-24/DC	EE	250504-603-*

**⚠ Warning:** Improper selection or use of products and related items in this catalog can cause death, serious injury or property damage. If you need any assistance in selecting, specifying, or ordering a valve, please contact ASCO at (800) 972-2726.

## TABLE OF CONTENTS

## 2-Way

- Two-way (2/2) Next Generation solenoid valves have one inlet port and one outlet port.
- Control of air, water, light oil, and non-corrosive media.
- Normally closed (opens when energized) and normally open (closed when energized) operation.
- Pipe sizes – 1/4 to 2 inch.

## 3-Way

- Three-way (3/2) Next Generation solenoid valves have three ports and two orifices. When one orifice is open, the other is closed.
- Control of air, water, light oil, and other non-corrosive media.
- Normally closed (pressure to cylinder port when energized) operation.
- Normally open (cylinder port exhausts when energized) operation.
- Universal operation (can function as normally open, normally closed, diverter of fluid flow, or selector of 2 fluid sources configurable by piping).
- Pipe sizes – 1/4 to 3/4 inch.

## 4-Way

- Four-way, four port (4/2) and five port (5/2) Next Generation solenoid valves have one pressure port, 2 cylinder ports, and either 1 or 2 exhaust ports.
- Control of air, water, light oil, and non-corrosive media.
- Single solenoid operation (pressure and exhaust ports and cylinder ports alternate connection based on solenoid operation).
- Pipe sizes – 1/4 to 1 inch.

## Engineering Section

### Principles of Operation

A solenoid valve is a combination of two basic functional units:

- A solenoid (electromagnet) with its core.
- A valve body containing one or more orifices.

Flow through an orifice is controlled by the movement of the core when the solenoid is energized or de-energized. The core is enclosed in a sealed tube, providing a compact, leaktight assembly. For additional information on different types and functions of solenoid valves including direct acting, internally pilot operated valves, two-way, three-way, and four-way valves please visit our website at [www.ascovalve.com](http://www.ascovalve.com).

### Solenoids

All RedHat Next Generation solenoid valves are rated for continuous duty under the operating conditions outlined within this section.

#### Coil Operating Voltage Ranges

All coils are designed for industrial operating voltages and can be used on the following voltage ranges:

Voltage Range	Minimum Voltage	Maximum Voltage
100-240V/50 or 60Hz/DC	85	264
24-99V/50 or 60Hz/DC	20.4	109
12-24/DC only	10.4	26.4

The coils with voltage ranges of 100-240 and 24-99 have three lead wires, 24 inches long (2 red for power input, and one green lead for grounding where necessary). These two versions are not polarity sensitive.

The coil with a voltage range of 12-24/DC has 3 lead wires, one red, one black, and one green. This coil is polarity sensitive. The red lead is the positive, black is the negative, and green is the ground wire. This solenoid is also polarity protected. Reversing the polarity will not damage the coil, but the coil will not function until the correct polarity is applied.

**Note:** The 100-240 voltage range is also suitable for battery charging circuits designed around a 125/DC nominal voltage range. The 12-24/DC voltage range will function properly down to 6/DC with reduced pressure ratings. Consult ASCO for more information.

## Electrical Specifications

2 Watt Electronic Coils	Type
Maximum Ambient Temperature	140°F
Maximum Cycle Rate	1 Operation/Second
Standard Coil Class of Insulation	H

## Power Consumption

The Next Generation solenoid nominal power rating is 2 watts. Depending on the input voltage applied, the actual power rating may vary. Please use the charts below to determine your actual power rating.

The advanced technology used in the Next Generation coil includes electronic circuitry which may limit the compatibility with certain control system components. The following issues need to be considered when specifying an output card or device to operate the Next Generation coil. An initial inrush current spike is drawn by the Next Generation coil. This inrush spike is 72 msec in duration, which is sufficient time for the core to reach the plugnut. The electrical requirement then drops to the holding value.

**Inrush Current:** The power source, wiring, and output device used need to have surge ratings equal to or greater than the inrush current value (appropriate to the voltage range) specified in the table below.

Inrush Current Rating	
Coil Version	Peak Inrush Current (Amps)
12-24/DC	3.2
24-99/50-60Hz/DC	1.4
100-240/50-60Hz/DC	0.32
Maximum Duration = 72 ms	

**Holding Current:** The power source, wiring, and output device used need to have continuous current ratings equal to or greater than the holding current value (appropriate to the voltage range) specified in the table below.

Holding Current Rating			
Coil Version	Input Voltage	Average Holding Current (Amps)	Average Holding Volt-Amps (VA)
12-24/DC	12	0.340	4.0
	24	0.250	6.0
24-99/50-60Hz/DC	24	0.170	4.0
	99	0.100	10.0
100-240/50-60Hz/DC	100	0.040	4.0
	240	0.032	7.5

**Leakage Currents:** The leakage current is defined as a current that is supplied from an output device when the device is in its off or de-activated state. Operation of Next Generation coil in a system that utilizes supervisory currents is not recommended.

Maximum Leakage Current	3 mA
-------------------------	------

## Solenoid Enclosures

The Next Generation solenoid coil is fully encapsulated using Dupont™ Zenite® Liquid Crystal Polymer resin (LCP). Zenite (LCP) is a thermoplastic polyester resin which exhibits several advantages over other thermoplastics. The advantages include excellent resistance to a wide range of organic solvents and automotive fluids\*, resistance to impact, and long term retention of properties at continuous-use temperatures.

\*Chemical resistance of Zenite LCP may not be suitable for all applications. Zenite LCP is not suitable for caustic solution. Please consult ASCO for appropriate product solutions.

Zenite is a registered Trademark of Dupont Co.

**General Purpose/Watertight** – Intended for indoor and outdoor use and provides protection classifications from NEMA types 1 through 4X.

**Type 1 General Purpose** – Intended for indoor use, primarily to provide protection for enclosed parts in locations without unusual service conditions. DIN-type terminals meeting ISO 4400 and DIN Standard 43650.

**Type 2 Dripproof** – Intended for indoor use, primarily to provide protection against limited amounts of falling water or dirt.

**Type 3 Raintight, Dusttight, and Sleet (Ice) Resistant** – Intended for outdoor use, primarily to provide protection against wind-blown dust, rain, and sleet; undamaged by the formation of ice on the enclosure.

**Type 3S Raintight, Dusttight, and Sleet (Ice) Resistant** – Intended for outdoor use, primarily to provide protection against wind-blown dust, rain, and sleet; external mechanism remains operable when ice laden.

**Type 3R Rainproof, Sleet (Ice) Resistant** – Intended for outdoor use, primarily to provide protection against falling rain and sleet; undamaged by the formation of ice on the enclosure.

**Type 4 Watertight and Dusttight** – Intended for indoor or outdoor use to provide protection against splashing water, water seepage, falling or hose-directed water, and severe external condensation; undamaged by the formation of ice on the enclosure.

**Type 4X Watertight, Dusttight, and Corrosion Resistant** – Same as Type 4 but provides additional protection to resist corrosion.

**Class I, Division 2 for Hazardous Locations/Watertight** – Meets Types 1 through 4X and is UL listed and CSA certified for Class I, Division 2, Groups A, B, C, and D and Class II, Division 2, Groups F and G. Operating temperature code T4A (120°C).

## Valve Specifications

### Minimum Operating Pressure Differential

The minimum operating pressure differential is required to fully open the valve and keep it open. For 2-way valves with a floating diaphragm, the valve may start to close below the minimum pressure differential. For 3 and 4-way valves, the minimum operating pressure differential is measured between the pressure and exhaust ports and must be maintained through the operating cycle to ensure complete transfer from one position to the other.

**Note:** Hung diaphragm constructions do not require a minimum pressure differential, however, may not yield maximum flow rates at low-pressure differentials.

### Maximum Operating Pressure Differential (MOPD)

The maximum operating pressure differential refers to the maximum difference in pressure between the inlet and outlet ports, against which the solenoid can safely operate the valve. If the pressure at the outlet is not known, it is safest to regard the supply pressure as the MOPD.

### Minimum Ambient Temperature

The nominal limitation of 32°F (0°C) is advisable for any valve that might contain moisture (water vapor). Where freezing water is not a factor, the minimum ambient temperature of the products listed in this catalog is 14°F (-10°C). Special constructions are available with low temperature elastomers to provide service at -40°F (-40°C) ambient temperatures. Consult ASCO for more information.

### Maximum Ambient Temperature

The maximum ambient temperature is 140°F (60°C). This limit is based on continuous energization with the maximum fluid temperatures as shown on each catalog page.

### Response Time

Response time from fully closed to fully open or vice versa depends on valve size, operating mode, fluids, temperature, inlet pressure, and pressure drop. The response times for Next Generation are defined as:

Small direct acting valves – 10 to 60 msec

Large direct acting valves – 25 to 90 msec

#### Internally pilot operated valves:

- Small diaphragm types – 20 to 100 msec

- Large diaphragm types – 80 to 150 msec

- Small piston types – 80 to 150 msec

- Large piston types – 105 to 200 msec

Operation on liquids has relatively little effect on small direct acting valves, however, response times of large direct acting and internally piloted valves may be lengthened by 50% to 100%.

### Viscosity

All valves with a pressure rating for light oil are designed for use with oils rated for a maximum of 300 SSU's with the following exceptions:

Series 8314, 8317, 8321 – 45 SSU

Series 8345 – 50 SSU

## Manual Operators

Manual operators are provided to operate the valves manually when electric actuation is not provided. There are two basic types of manual operators, momentary and maintained. To determine which type of manual operator is available for your valves, please see the Optional Features Chart on the relevant valve catalog page. Once it is determined that the subject valve can accommodate a manual operator, the chart below will tell you the type of manual operator. The chart also references the relevant cutaway illustration.

Series Number	Const. Ref.	Manual Operator Suffix	Manual Operator Type	Illustration Number
8030	8	MO	Maintained	3
8210	4, 7, 10, 11, 12	MO	Maintained	2
8262	1	MS	Maintained	6
8314	1	MS	Maintained	6
8316	5, 6	MO	Maintained	2
8320	2	MO	Momentary	1
8320	2	MS	Maintained	6
8321	4	MO	Momentary	1
8321	4	MS	Maintained	3
8344	1, 3, 4	MO	Maintained	2
8345	2	MO	Maintained	5

## Resilient Material Selection

**NBR (Buna "N", Nitrile)** – NBR is commonly referred to as a nitrile rubber and is the standard synthetic elastomer for accomplishing resilient-type seating or sealing in ASCO valves. It has excellent compatibility for most air, water, and light oil applications. It has a useful temperature range of 0°F to 180°F (-18°C to 82°C).

**FKM (Viton®/Fluorel®, etc.)** – FKM is a fluorocarbon elastomer primarily developed for handling such hydrocarbons as jet fuels, gasolines, solvents, etc., which normally cause detrimental swelling to NBR. FKM has a high temperature range similar to EPDM, but more resistant to "dry heat." FKM has a wide range of chemical compatibility. It has a useful temperature range of 0°F to 350°F (-18°C to 177°C).

**EPDM (Ethylene Propylene)** – EPDM is selected for applications above the NBR temperature range, such as handling hot water and steam. Ethylene propylene has an extremely wide range of fluid compatibility, but has the distinct disadvantage that it cannot be used with petroleum-based fluids or contaminated fluids (such as lubricated air). It has a useful temperature range of -10°F to 300°F (-23°C to 149°C).

**CR (Neoprene)** – CR is principally used as an external seal in refrigeration applications. It is also utilized for oxygen service. It has a useful temperature range of 0°F to 180°F (-18°C to 82°C).

**Oxygen Service** – All valve parts are degreased and blacklight inspected for cleanliness. They are assembled and tested in a clean area using oil-free air or nitrogen; helium mass spectrometer tested for external leakage. The pipe connections are sealed with plugs, and each valve is tagged certifying testing. All valves are shipped in sealed bags.

**PTFE (Teflon®, Rulon)** – PTFE and PTFE with fillers are considered more a plastic than a resilient-type material. They are virtually unattacked by any fluid. Their temperature usage has ranges from discs for cryogenic valves to discs for steam valves. They are not easily fabricated and are known to have "cold flow" characteristics which may contribute to objectionable leakage, particularly on gases.

**Urethane** – Urethane is primarily used on high pressure valves, and/or for long life applications, because of its high strength and abrasion resistance. The physical and chemical properties of urethane vary depending on whether the compound is polyester or polyether based. Urethane has a wide range of chemical resistance including alcohols, non-aromatic compounds, ethers, edible fats and oils, hydraulic fluid, and water. It has a useful temperature range of -90°F to 200°F for ethers, and -30°F to 200°F for esters. Polyester based Urethanes in contact with moisture should be limited to a maximum temperature of 140°F.

Viton & Teflon are registered Trademarks of DuPont Co.  
Fluorel is a registered Trademark of 3M.

## Approvals

### Approval Listing Code and Information

UL, CSA, and CE listings are indicated on each series of valves in this catalog. Listing codes and other information follow in this section.

### Agency Valve Classifications and Code Reference

**Solenoid Recognized Components** – Solenoids in this category are intended for use as factory-installed components of equipment where final acceptability must be determined by UL or CSA. ASCO RedHat Next Generation solenoids are listed in the UL recognized component index under Guide No. YSYI2 for ordinary locations and VAPT for hazardous locations.

**General Purpose Valves** – Normally open or normally closed valves intended to control the fluid flow, but not to be depended upon to act as safety valves. This is a UL and CSA classification and is not intended to indicate valve service or application. General purpose valves are listed in UL index under Guide No YIOZ or YIOZ2 for ordinary locations and YTSX or YTSX2 for hazardous locations.

**Safety Shutoff Valves** – Normally closed valves of the “on” and “off” type, intended to be actuated by a safety control or emergency device, to prevent unsafe fluid delivery. They may also be used as General Purpose valves. Multiple port valves may be designated as safety shutoff valves only with respect to the normally closed port. This is a UL and CSA classification. Safety shutoff valves are listed in UL index under Guide YIOZ or YIOZ2 for ordinary locations and YTSX or YTSX2 for hazardous locations.

### Underwriters Laboratories (UL)

UL429, “Electrically Operated Valves.”

UL1604, “Electrical Equipment for use in Class I and II, Division 2 and Class III hazardous classified locations.”

### Canadian Standards Association (CSA)

Standard C22.2 No. 139, “Electrically Operated Valves.”

Standard C22.2 No. 213, “Electrical equipment for use in Class I, Division 2 hazardous locations.”

### European Directive (CE)

The council of the European Communities under the treaty establishing the European Economic Community (EEC) adopted into law a series of directives to harmonize technical standards. Solenoid valves are controlled by:

<b>Council</b>	<b>Directive #</b>
Machinery	89/392/EEC
EMC (Electromagnetic Capability)	89/336/7EC
Low Voltage	72/23/EEC
PED (Pressure Equipment Directive)	97/23/EC

ASCO RedHat Next Generation valves comply with these directives, through third party or self-certification. The General Purpose/Watertight coils each bear the CE approval mark on the coil.

## Quality Assurance

ASCO’s Quality Assurance Program meets all the requirements of ISO9001-2000. ASCO can provide product from 17 ISO-certified facilities around the world.

ASCO offers a complete catalog of products and accessories to satisfy any of your application needs. Visit us online at [www.ascovalve.com](http://www.ascovalve.com) to view our full line of products.

### Red-Hat Solenoid Valves

The largest selection of 2, 3, and 4-way solenoid valves, designed to handle the most demanding fluid control applications.

### ASCO Scientific

Highest quality micro-miniature solenoid valves for medical and analytical applications.

### Pneumatic Controls

Directional control valves, air preparation equipment, actuators, and accessories for fluid power applications.

### Valve Monitoring Systems

Integrated visual indication technology with network communication capabilities that revolutionizes position indication solutions.

### Process Automation

Pilot valves and control accessories for reliable process solutions.

### Pressure and Temperature Sensing

Devices for pressure and temperature monitoring.

### ASCO S Series

Compact valve solutions for commercial applications.
